Palm OS Programming Recipes

Palm OS Programming Recipes are technical articles with step-by-step explanations describing how to perform specific tasks related to Palm OS programming. They are different from existing sample code because they have step-by-step explanations about specific subjects. In order to demonstrate these subjects, recipes may contain text, code segments, sample code, or even downloadable project files. A developer who has a basic knowledge of programming and of the Palm OS should be able to follow each recipe and learn about the subject.

Palm OS Programming Recipes currently cover most of the areas of Palm OS programming including UI Objects, UI Concepts, Databases and Storage, Communications, Conduits and other Miscellaneous subjects.

UI Objects

- Controls: buttons
- Controls: switching forms
- Controls: checkboxes
- Controls: push buttons
- Controls: selector triggers
- Bitmaps: Adding a Bitmap Family to a Form, Drawing a Bitmap Family Member, Using WinPaintBitmap Instead of WinDrawBitmap, Copying a Bitmap from an Offscreen Window.
- Gadgets: basic use prior to 3.5
- Gadgets: basic use 3.5 and higher (i.e. Extended Gadgets)
- Initializing text in a simple editable field
- Fields with static text
- Lists: with predetermined, dynamic, or custom-drawn contents
- Modal dialogs

UI Concepts

- Command Bar: basic usage
- Find: Supporting global find

Databases and Storage

- Data Manager: handling database with structured records

Communications

- Exchange Manager: Sending text to local PIM applications in Palm OS 3.0 or later
- Exchange Manager: Sending text to local PIM applications in Palm OS 4.0 or later
- Exchange Manager: Sending records by using the Exchange Manager
- Exchange Manager: Sending a whole database
- NetLib: open lib, handling sockets, etc.
- Serial Manager: How to set serial wakeup handler using the New Serial Manager?
- Telephony: Speech Calls are the base of telephony!

Conduits

- Conduit API: implementing a skeleton conduit, entry points
- Sync API: accessing a handheld database with the Sync Manager API
- HotSync Log API: adding logging to a conduit
- Expansion Manager/VFS API: determing information about expansion cards

Miscellaneous

- Notifications: sending and receiving
- Alarms: enabling alarms for applications
