Implementing Handheld Applications

PalmSource 99

- Objective
  - Learn the mechanics of using CodeWarrior® to create a Palm OS® application
- Agenda
  - Create, build, and run a do-nothing application
  - Add UI elements using Constructor
  - Add code to make the UI elements work

Create, Build and Run a Do-Nothing Application

PalmSource 99

- Create New Project in CodeWarrior®
- Build and download to Palm OS® Emulator

Add UI Elements Using Constructor

PalmSource 99

- Double-click on .rsr file to open Constructor
- Add buttons, labels, and checkboxes in Constructor
- Save the .rsr file
- Rebuild in CodeWarrior

Add Code to Make the UI Elements Work

- Constructor generates a .h file containing constants for each UI element
- Modify form event handler
  - Add code in **`ctlSelectEvent`** case
  - Check for constant of desired UI element
  - Add functionality

Summary

PalmSource 99

- Create, build, and run a do-nothing application
- Add UI elements using Constructor
- Add code to make the UI elements work
