Overview

- New and Emerging DEVELOPMENT TOOLS
  - Handheld development tools
  - Conduit development tools

Emerging Tools…

PalmSource 99

- Tools Night!!!
  - Tonight—In the open labs beginning at 9:00 p.m., come see demos, ask questions, and get to know your developer tools developer
- Look for  that developer will be available for questions and demos at TOOLS NIGHT!!!

Handheld Development Tools

PalmSource 99

- HanDBase Developer Edition
- MobileBuilder
- OnBoardC
- ScoutArchitect
- StylusWareBasic
- Palm Application Framework

HanDBase Developer Edition

- Similar to HanDBase, with the exception that it creates .PRC files that can be sold and given to customers
- Easy and fast development tool
- Target release date: January 2000
- Cost $449.00

HanDBase

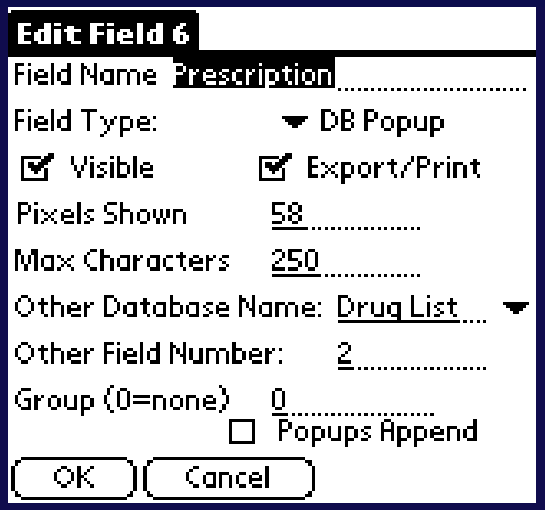

HanDBase Developer Edition

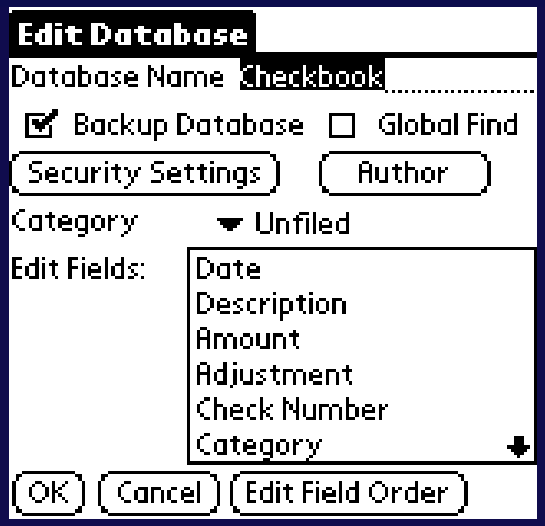

- Features
  - Developers can distribute a royalty free run-time of HanDBase with their applets and can customize the icon, about screen, etc.
  - Create the database, program name, icon, help screen, and about description right on your Palm Computing Platform device
  - Very powerful engine allows for multiple relational databases to be linked in several ways
  - Supports up to 60 databases with 30 fields each, and each database can contain 65,000 records
  - Supports beaming, printing, exporting, importing, filtering, sorting, security and more
  - Desktop tools for Windows, Dos, OS/2, Mac, Unix/Linux

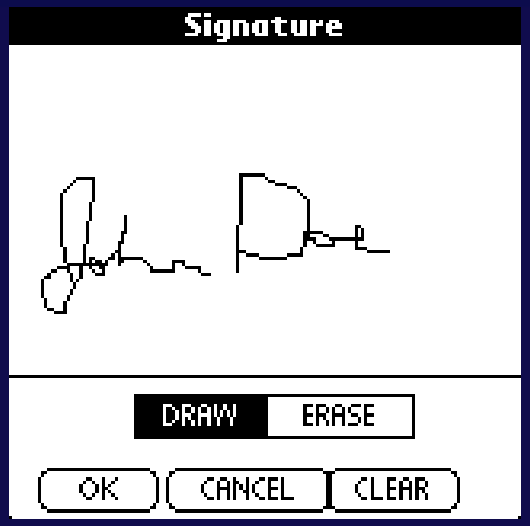

HanDBase

PalmSource 99

- Get more information at http://www.ddhsoftware.com/

MobileBuilder

- MobileBuilder provides complete easy-to-use RAD tool to quickly create powerful cross-platform solutions
- Focus—to allow developers to create powerful, custom applications
- Release time, fall of 1999
- Estimated cost $995
  - Runtime approximately $49–$59 with volume discounts

PenRight!
Mobile Made Easy

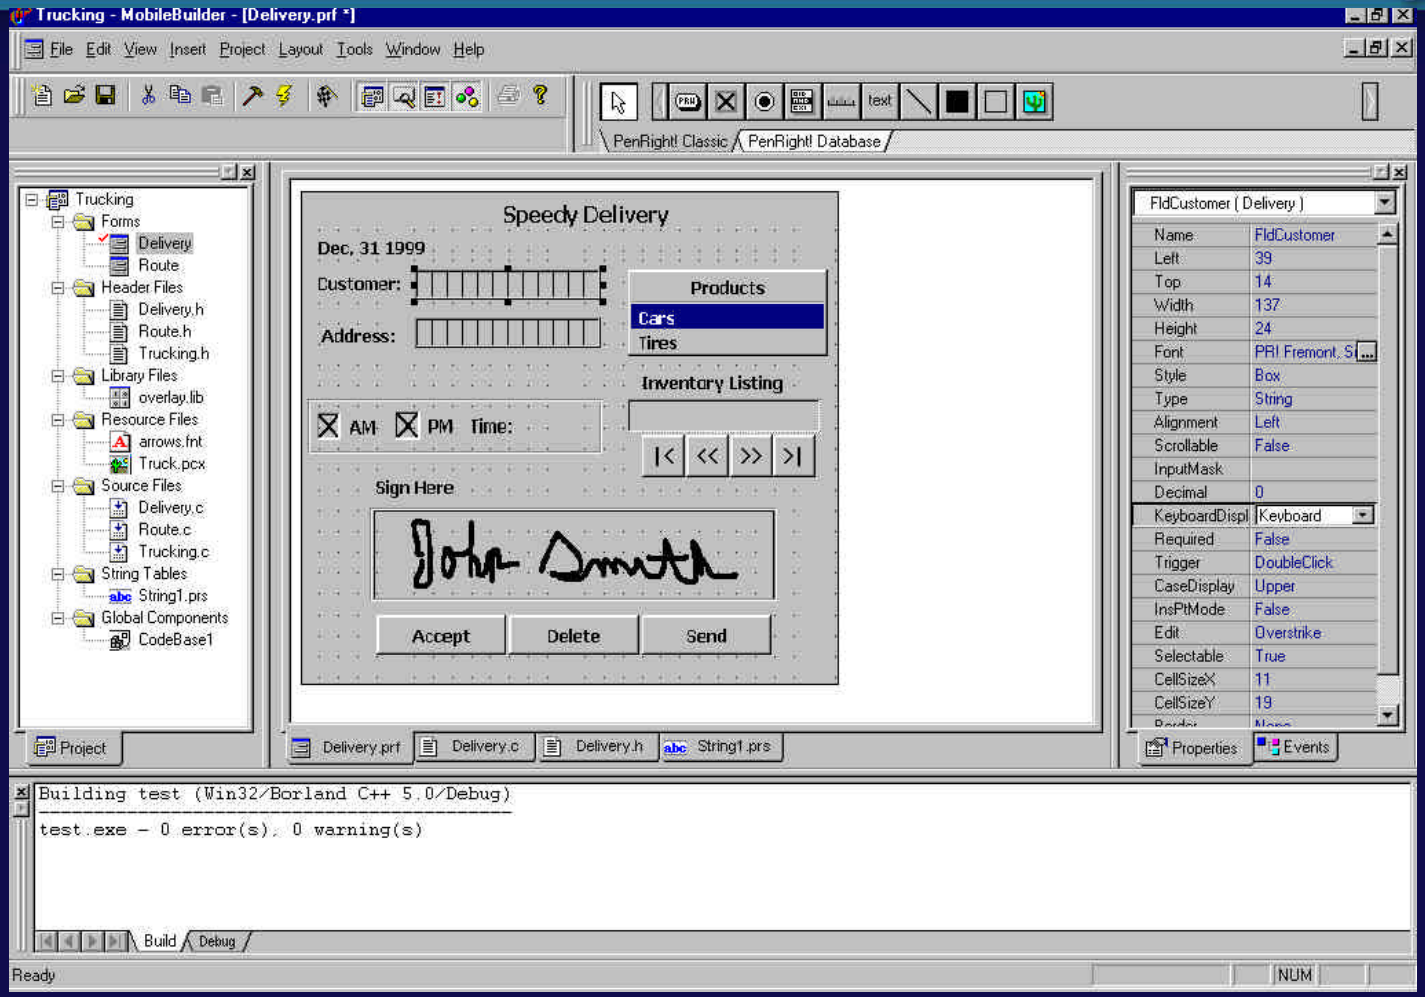

MobileBuilder

- Features
  - Easy to use visual RAD tool supports all native palm controls and signature capture
  - Flexible/Open “no-limits” C-based environment, links in C/C++ libraries, native Palm™ device functions, C source code into application designs
  - Code generator creates applications for multiple operating systems
  - Built in database support with conduits
  - Over 350 built in APIs optimized for handheld functionality
  - Built in Code Assistant automatically inserts project code
  - Works with other third party packages such as Sybase, Oracle, Riverbed, etc.

MobileBuilder

- http://www.penright.com/

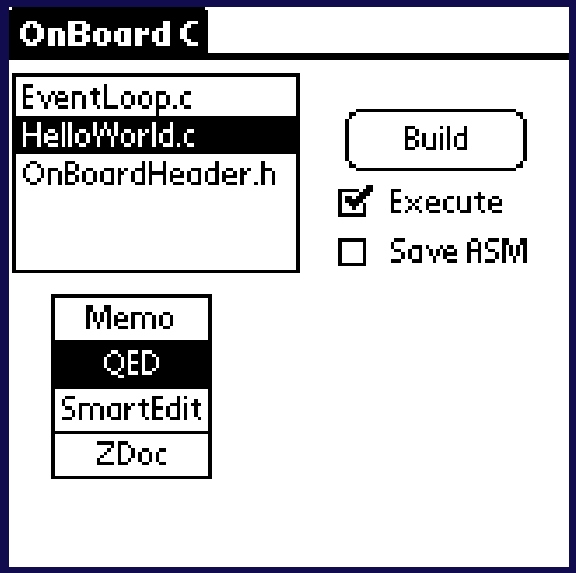

OnBoardC

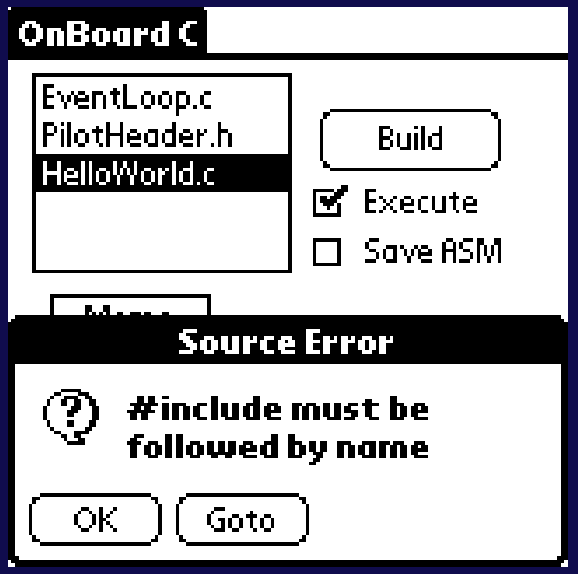

- OnBoardC is a (mostly) ANSI compatible C compiler running native on the Palm device, generating 68K machine code to produce Palm applications
- Knowledge of C required
- Tentative release in December, 1999

OnBoardC

- Features
  - Compiles source from either MemoPad records or DOC files and builds a .prc executable
  - The compiler has been tested on the PalmPilot Professional and the Palm III™ organizers
  - Preprocessor support is limited to #define, #include and #ifdef… #endif only
  - No optimization
  - The supplied header file for the Palm API is an accumulation of the ‘most useful’ entry-points

OnBoardC

- Get more information at http://www.individeo.net/OnBoardC.html

ScoutArchitect

PalmSource 99

- ScoutArchitect's intuitive interface enables developers to quickly and easily jump-start the development of complex mobile applications
- Cost: $5K for first developer, $2K for each extra developer; Comes with a copy of ScoutSync, ScoutIT, and related SDKs
- Get more information at http://www.riverbedtech.com

ScoutArchitect

- Features
  - Intuitive, Easy-to-use interface
  - Device Neutral Design Environment—not forced to learn a new programming language to develop mobile applications
  - Forward and reverse engineering of applications
  - Plug-Ins and Open APIs automate integration with back-end information resources
  - Auto-generation of Palm applications in Satellite Forms 2.x/3.x or CodeWarrior
  - Auto-generate Windows CE applications in Visual Basic 5.x/6.x or Visual C++ 5.x/6.x

StylusWareBasic

- StylusWareBasic combines some of the speed-of-development strengths of forms-based tools with some of the functionality strengths of low-level languages like “C” to provide a middle ground where you get speed-of-development without giving up functionality
- VB programmers will adapt quickly to StylusWareBasic
- Cost expected to be <$100 with no runtime fees
- Release date November 15, 1999

StylusWareBasic

A product of StylusWare, Inc.

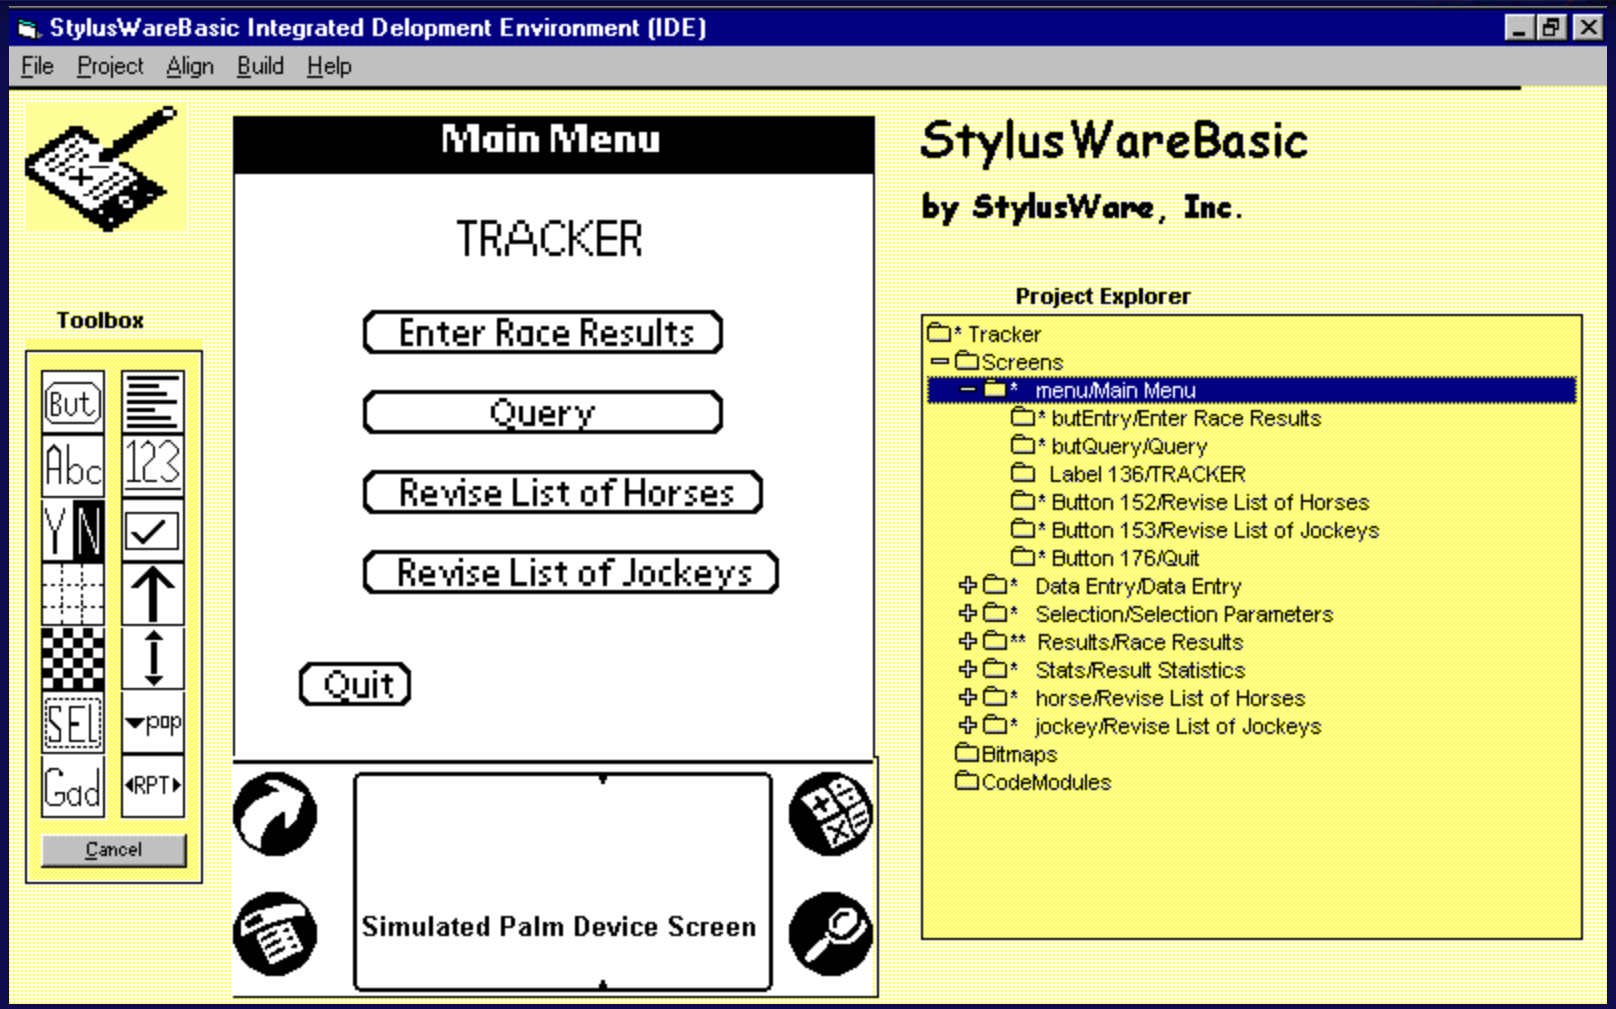

StylusWareBasic

- Features
  - Rapid screen design and high-level programming facilities
  - WYSIWYG screen editor; supports all standard Palm O/S screen display objects
  - Powerful scripting language based on the familiar BASIC syntax with over 150 commands and functions
  - Built-in code editor provides ease-of-use functionality for cut/paste, copy, and search; extensive integrated HELP file for instantaneous command format lookup
  - Includes a non-complicated programmable conduit

StylusWareBasic

- Get more information at www.stylusware.com

Conduit Development Tools

PalmSource 99

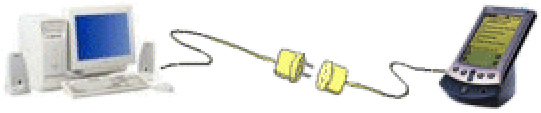

- EHAND Connect Server

EHAND Connect Server

- Developer can easily write server-based synchronization using Visual Basic
- Estimated base price of $2500
- General availability during Q1-2000
- Recruiting beta testers during PalmSource™ and the rest of Q4-1999
- Get more information at http://www.ehand.com

EHAND Connect™

EHAND Connect Server

- Features
  - Use Visual Basic to create server-based synchronization over TCP/IP
  - Provides single point- multi-user sync with little effort
  - Reduces the development time creating a server based synchronization environment
  - Hides the low level complexity (byte ordering, calling conventions etc.)
  - Easy integration with other Windows components via COM
  - Provides security for the Palm device
  - Easy deployment and administration via web-based administration interface
  - Easy debugging in Visual Basic IDE

Palm Application Framework

- Bear River Associates is a provider of enterprise mobile solutions (products and custom), not a development tool company
- Why develop a framework?
- Palm Application Framework developed as a result of frustration with working in C (after >10 years of using OO languages and frameworks)
- Goals:
  - Drastically reduce time and effort to develop enterprise applications
  - Greatly improve quality and reliability of code
  - Reduce maintenance time

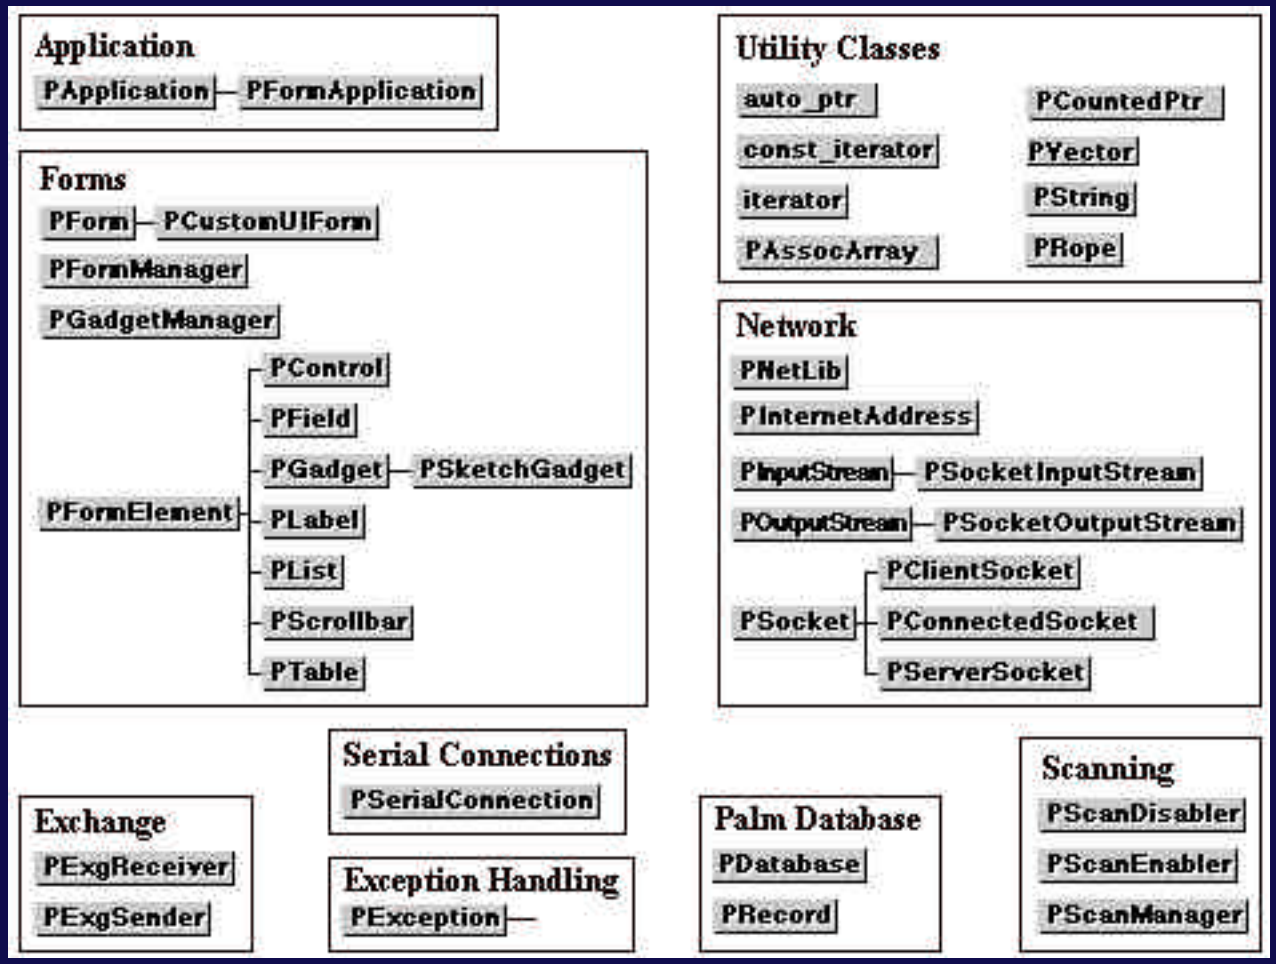

Palm Application Framework

PalmSource 99

- Intent is to release this framework for general use at no cost (Open Source, …?)
- Works with CodeWarrior today; gcc support pending
- Includes documentation; some sample code; sample apps coming
- Memory usage: code reuse lowers memory for many apps, may be higher for small apps
- Support included for:
  - NetLib
  - IR Exchange
  - Serial communications
  - Scanning (Symbol Technologies)
- Contact: paf_info@bearriver.com
