Palm™ HotSync® Server Development

Jim Firestone
Sr. System Engineer
Business/Govt. Sales
Palm, Inc.

Andrew Earle
Sr. Consultant
Aether Systems

PalmSource
Conference 2000

Agenda

- Business benefits of server sync
- Palm™ HotSync® Server architecture and features
- Palm™ HotSync® Server development and tools, API
- Demonstration
- Summary
- Q&A

What Is the Palm™ HotSync® Server?

"The Palm™ HotSync® Server is the Palm, Inc. software platform for leveraging the handheld computing advantage in the enterprise."

PalmSource Conference 2000

Business Benefits of Server-Based Management/Sync

- Control by IT of security and integrity of data
  - Ensuring complete, reliable backups
- Control by IT of users, devices, applications
  - Selective access to data
  - Standardized builds, easily deployed
  - Tracking usage and device configuration
- Remove PC as a required component
- Lower costs
- Less latent collection and distribution of data

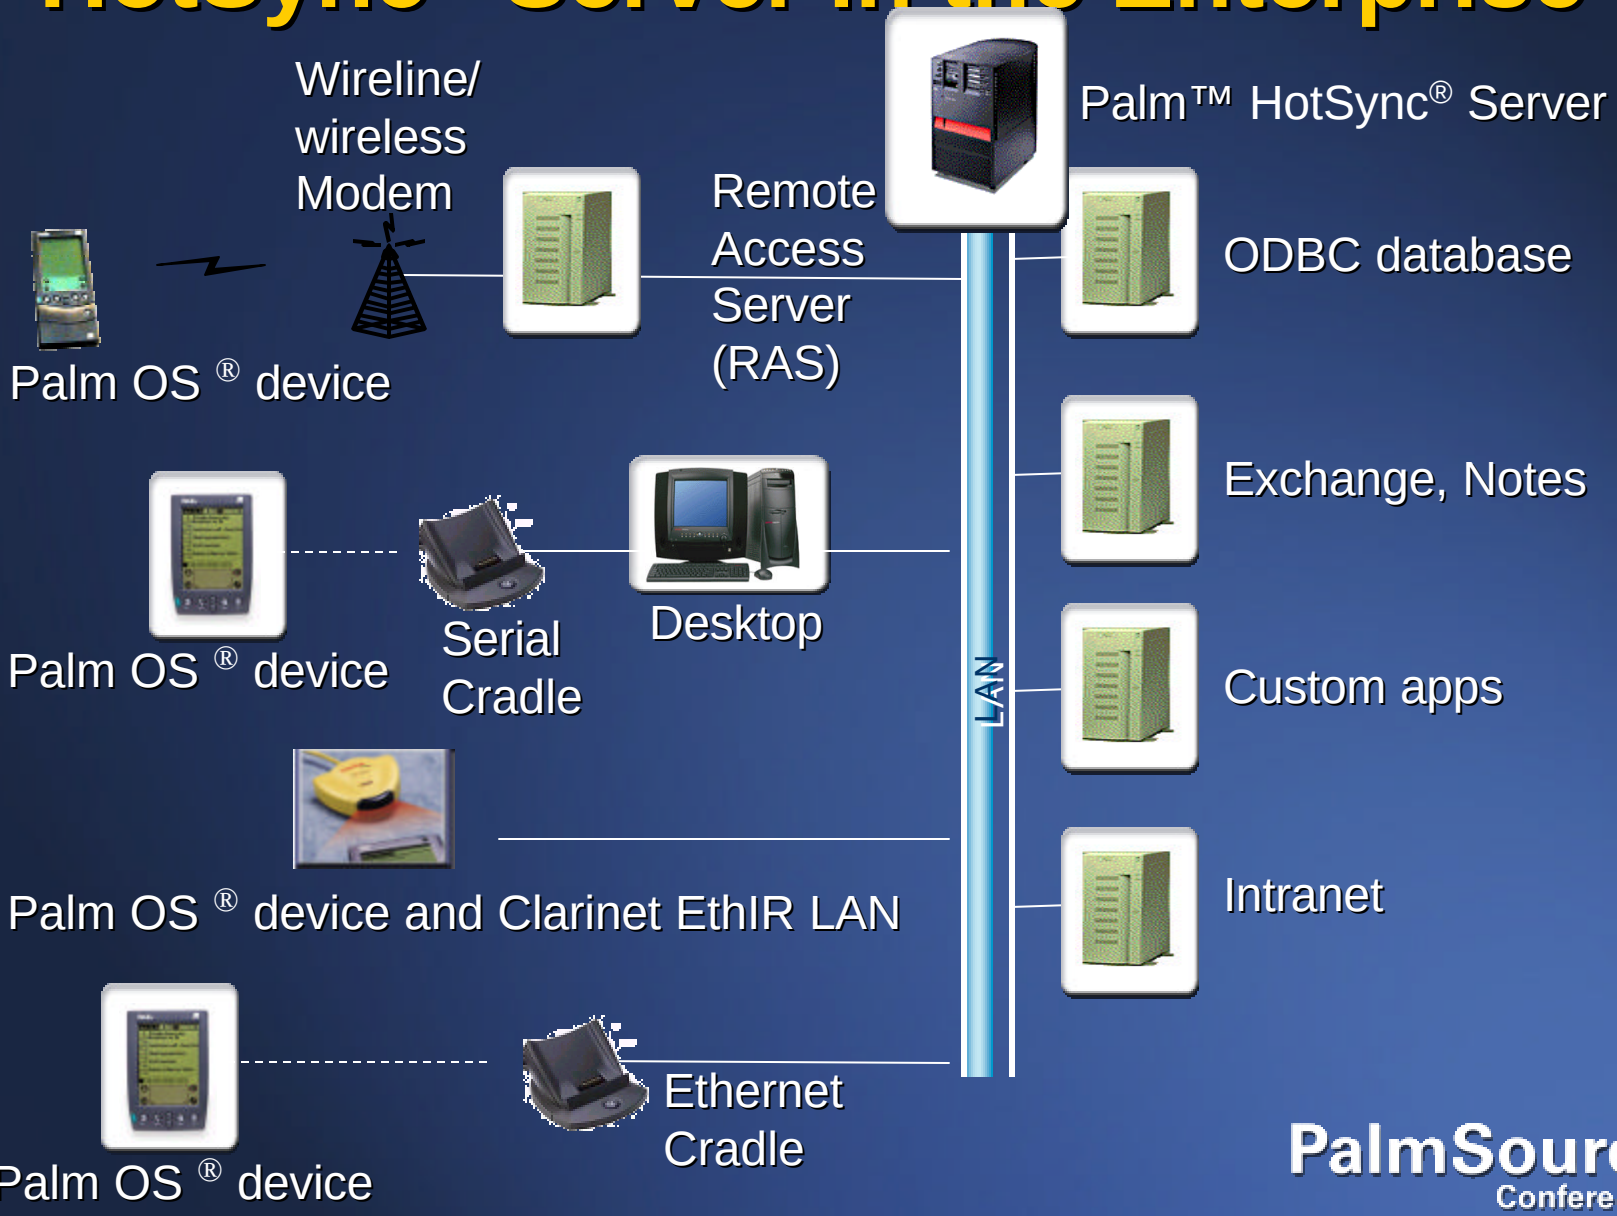

Palm™ HotSync® Server 3.5 Facts

- Based on Aether Systems' ScoutWare™ technology
- NT Server 4.0, 133MHz Pentium, 128M RAM, 60M HD
- Conduit for MS Exchange email and calendar
- Lotus Notes email and calendar, IMAP email are in Beta for 3.6
- Wireline or wireless access
- Standard or premium support

Palm™ HotSync® Server 3.5 Key Functionality

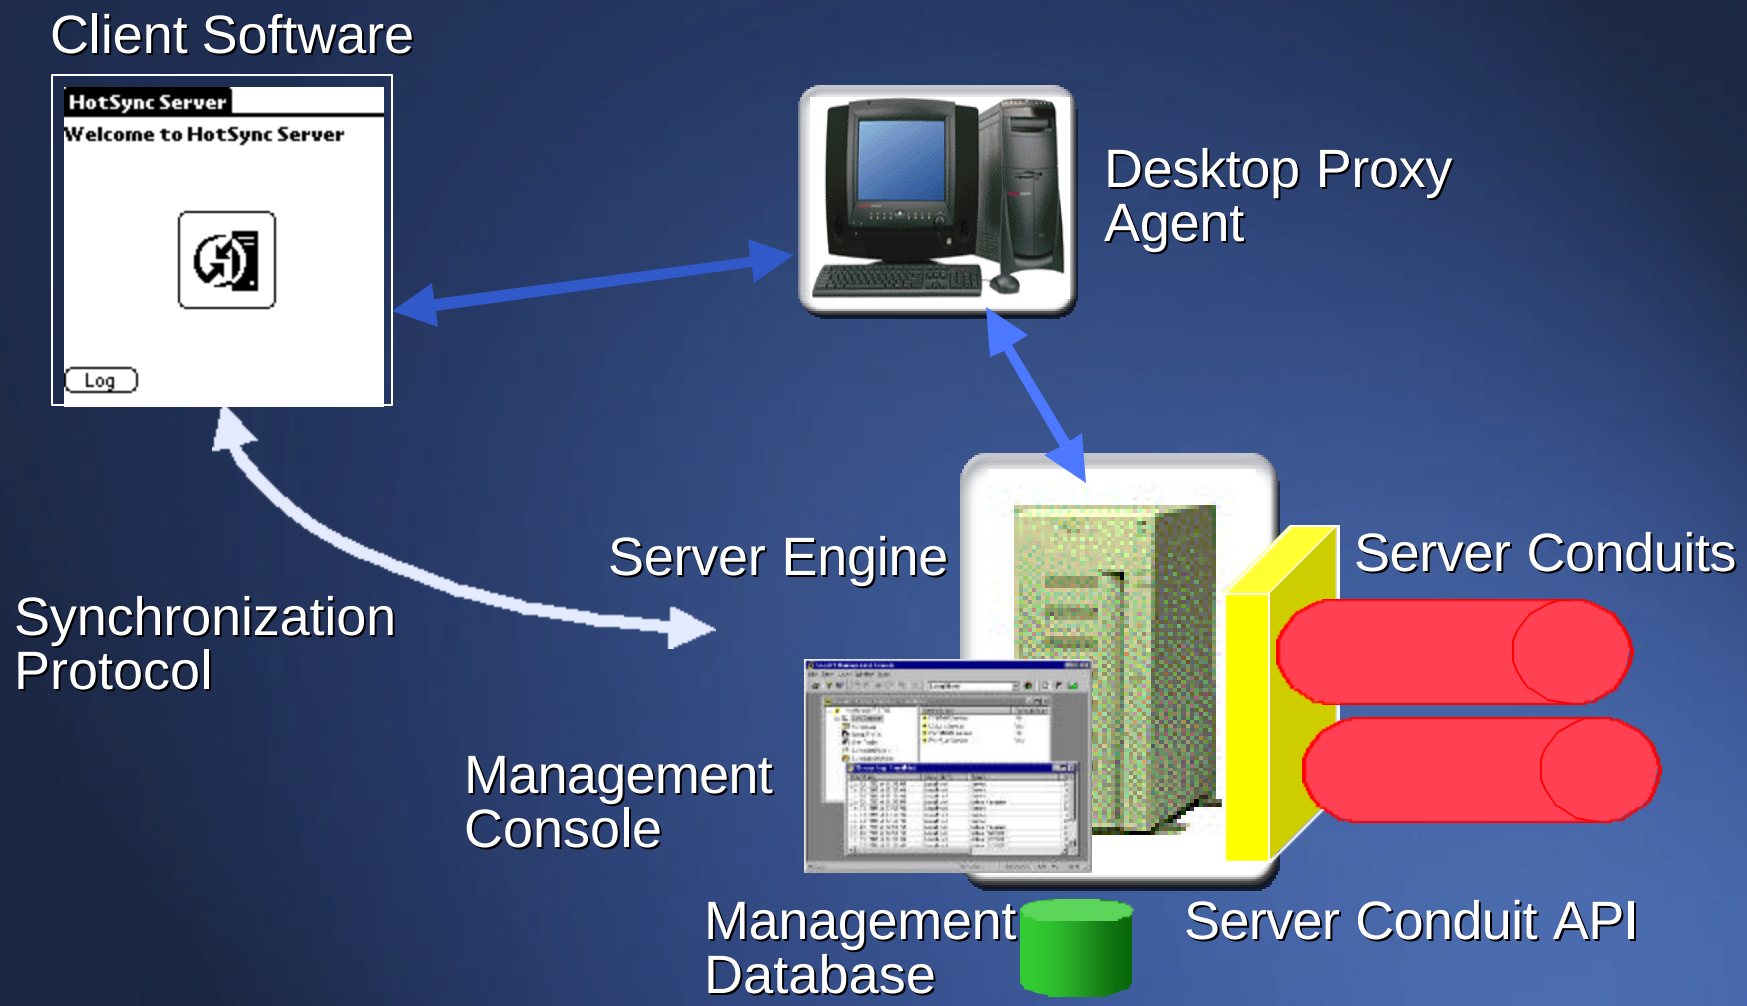

- User profiles, groups
- Security
- Install/remove apps, standard builds
- Server and user session monitoring
- Device inventory and monitoring
- Centralized backup/restore
- Conduit API and SDK supports Microsoft COM

HotSync® Server in the Enterprise

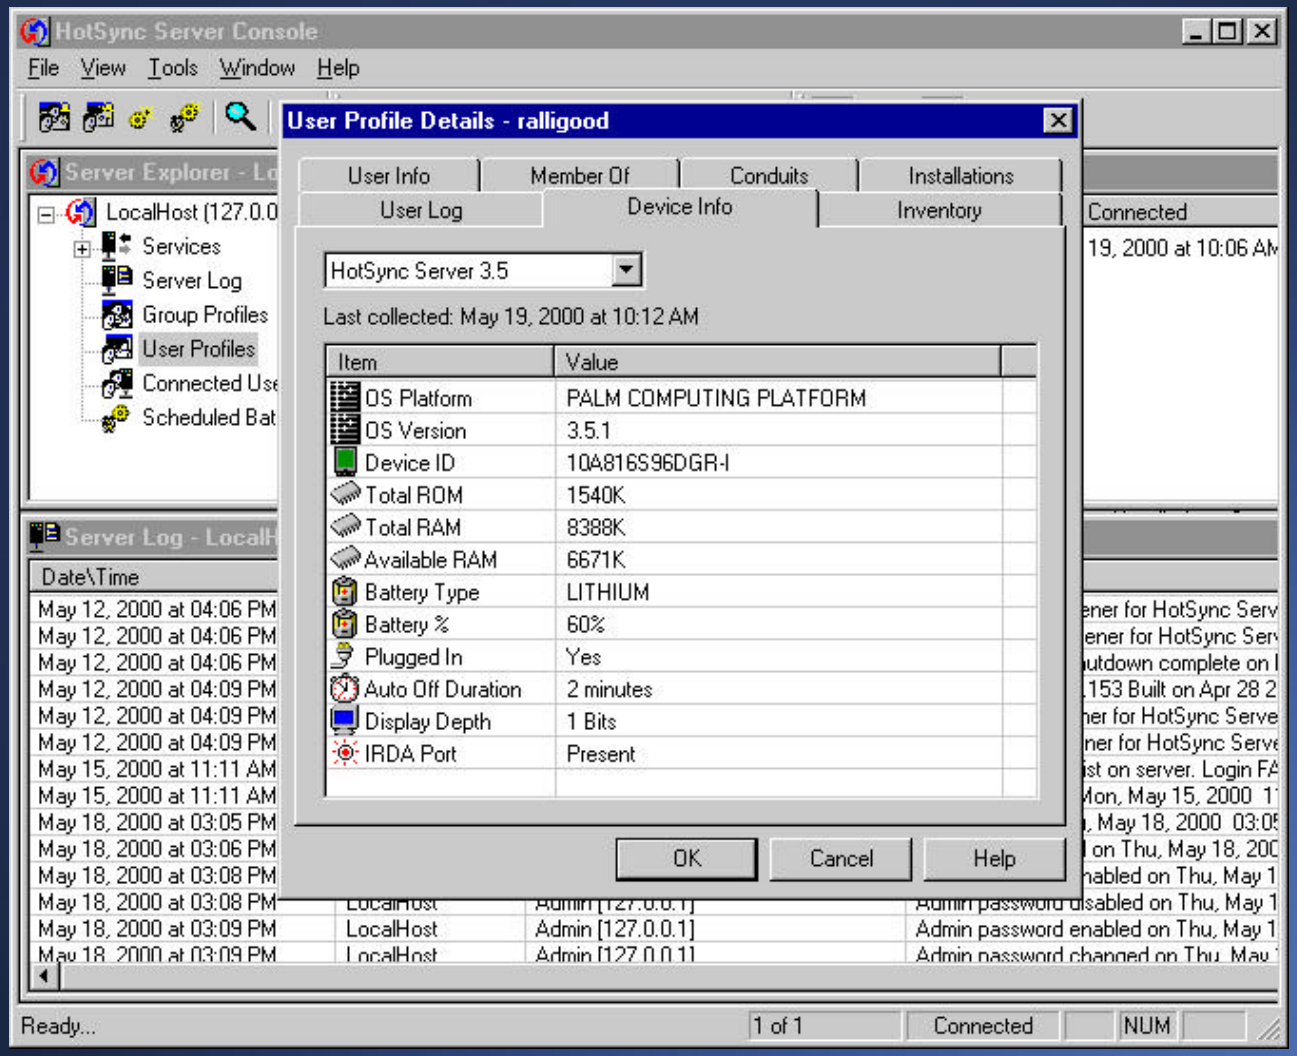

PalmSource Conference 2000

HotSync® Server Components

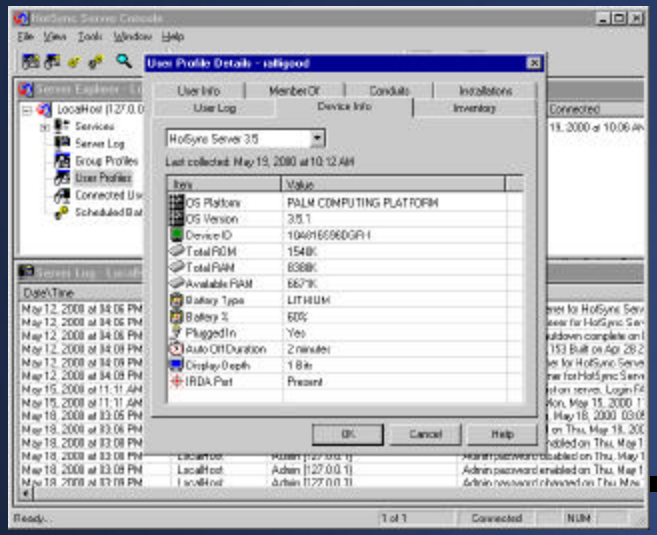

PalmSource Conference 2000

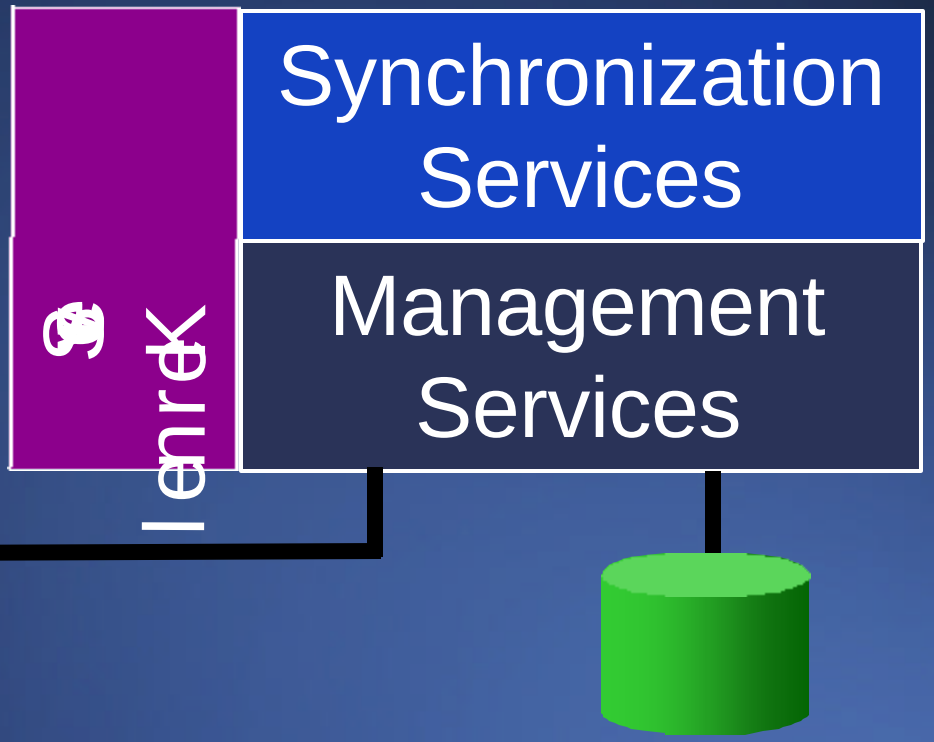

Console-based Management

HotSync® Server Management Architecture

Management Console

PalmSource Conference 2000

A True Platform, Not a Short-Term Solution

- Open
  - Support for Palm OS® handhelds
  - Extensibility through Conduit Development Kit
- Based on industry standards
  - TCP/IP, Ethernet
  - Microsoft Windows NT, Common Object Model
- Supported by leading ISVs and solution providers
  - Aether Software, Computer Associates, PeopleSoft, Sybase, Synchrologic

Expected Future Capabilities

- SSL encryption of sync session
- Server running under Windows 2000
- Support for other handhelds, e.g., Win CE
- Integration with legacy system management
- Integration with user directory services
- Additional groupware conduits—e.g., HTML

HotSync® Server Conduit Development

PalmSource

Conference 2000

HotSync Server Conduit Development

Conduit Architecture

- Component Object Model (COM)
- Plug-in Components
- Shareable
- Reusable

HotSync Server Conduit Development

Development Languages

- Any Fully COM-Compliant Development Language
  - Microsoft Visual C++
  - Microsoft Visual Basic
  - Borland Delphi
  - Select Java Compilers
  - Others
- Breadth of Language Selection Provides…
  - Easy learning curve
  - Maximum power and flexibility

HotSync Server Conduit Development

Conduit Installation and Configuration

- Installation
  - Conduit (DLL) can be installed anywhere on server
  - Register the conduit with Windows NT
- Configuration
  - Register conduit with HotSync Server
  - Associate conduit with users and/or groups
- Often Performed with Installation Wizards
  - Provided by Developer
  - InstallShield
  - Custom

HotSync® Server API

Overview

- PDB Creation and Access
- Record and Data Manipulation
- Logging and Error Handling
- Device Management

HotSync Server API

PDB Creation and Access

- Dynamically Create a New PDB
- Read and Write PDBs
  - To or from disk or the client
  - Fast or Slow Sync
  - Read and write by category
- Access to Multiple PDB Formats
  - Native Palm database format
  - ScoutBuilder
  - Satellite Forms
  - More to come

HotSync Server API

Record and Data Manipulation

- Easy Record Navigation
- Ability to Check Record Status
  - New
  - Modified
  - Deleted or Archived
- Add, Delete, and Modify Records and Fields
- Read and Modify PDB Header Data
  - Versions
  - Timestamps
  - Creator
  - Etc.

HotSync Server API

Logging and Error Handling

- Error Handling Methods Provided
  - Read error code
  - Read error description
- Logging to Palm Available
  - Text messages similar to HotSync Log
  - Also viewable on Server
  - Report errors, notify success, etc.

HotSync Server API

Device Management

- Monitor Device Statistics
  - OS Version
  - Battery life
  - Available RAM
  - Etc.
- Resource and Database Inventory
  - List installed applications and PDBs
  - Install or update applications and PDBs
  - Remove applications and PDBs
- Backup and Restore

Demonstration

eMedic Sales App,
Management Console

PalmSource
Conference 2000

Summary

"Portable synchronization. Sponsored by IT."

- HotSync® Server is sync for the enterprise
  - Secure access to corporate data from anywhere
  - Wired or wireless—your choice !!
  - Open platform grows with your business
- HotSync® Server is device management for the enterprise
  - Unprecedented control over handheld assets by IT
  - Centralizes inventory, data access, and application deployment

Consider a Test Drive…

- HotSync® Server evaluation program
  - 60-day trial for up to 5 users
  - Includes technical support
  - Evaluate Ethernet cradle on request
  - Exchange, Notes and IMAP conduits available
- For more information, contact Palm Business and Government Sales at (888) 223-4817
- http://www.palm.com/enterprise/server.html
