CTO, Pumatech Inc.

PalmSource
Conference 2000

Agenda

- Pumatech at a Glance
- Satellite Forms and Satellite Forms Server
  - Overview
  - Demonstrations
- MAP
  - What is MAP?
  - Demonstrations
  - MAP Business Model
  - The Future of MAP

Pumatech at a Glance

Mobile Internet
Bring the Web to you!

Global One Internet address, synchronize anything!

Enterprise Pumatech first to offer server-based synchronization solutions

Handhelds Pumatech first to synchronize across multiple apps

Notebooks Pumatech first to deliver leading-edge file synchronization

Satellite Forms and Satellite Forms Server

- Satellite Forms
  - Rapidly develop and deploy mission-critical applications
  - Easily integrate with enterprise data
  - Cost effectively maintain applications
- Satellite Forms Server
  - Companion Server for custom mobile solutions
  - Flexible, extensible platform
  - Mobile device, user, and application management

PalmSource Conference 2000

Satellite Forms and Satellite Forms Server

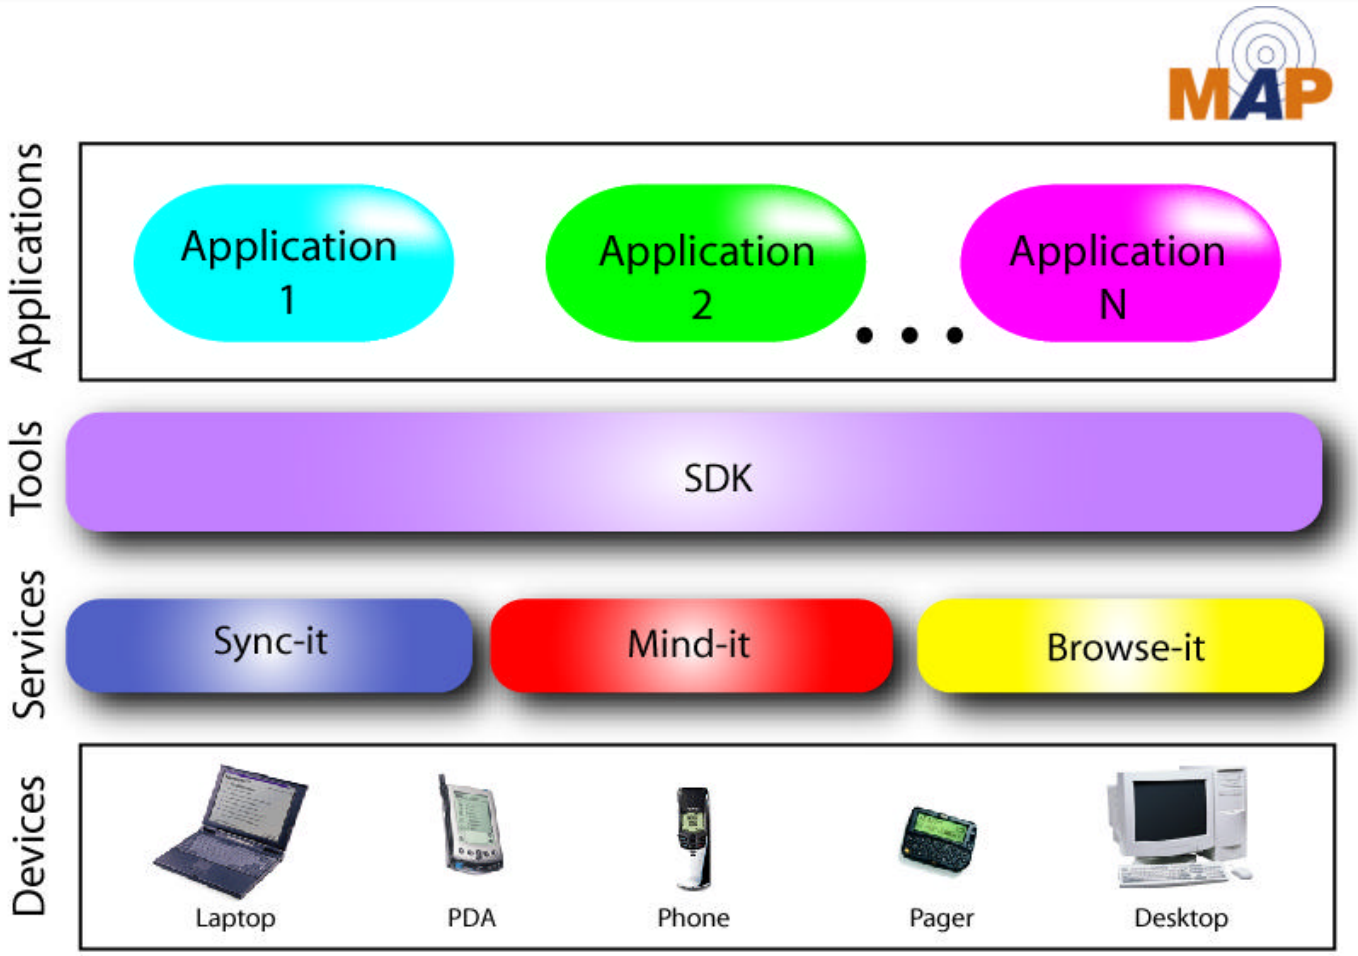

- Develop Sat. Forms Applications
- Develop Sat. Forms Extensions
- Develop Server Plug-ins
- Develop Complete Vertical Solutions

Satellite Forms and Satellite Forms Server

Desktop

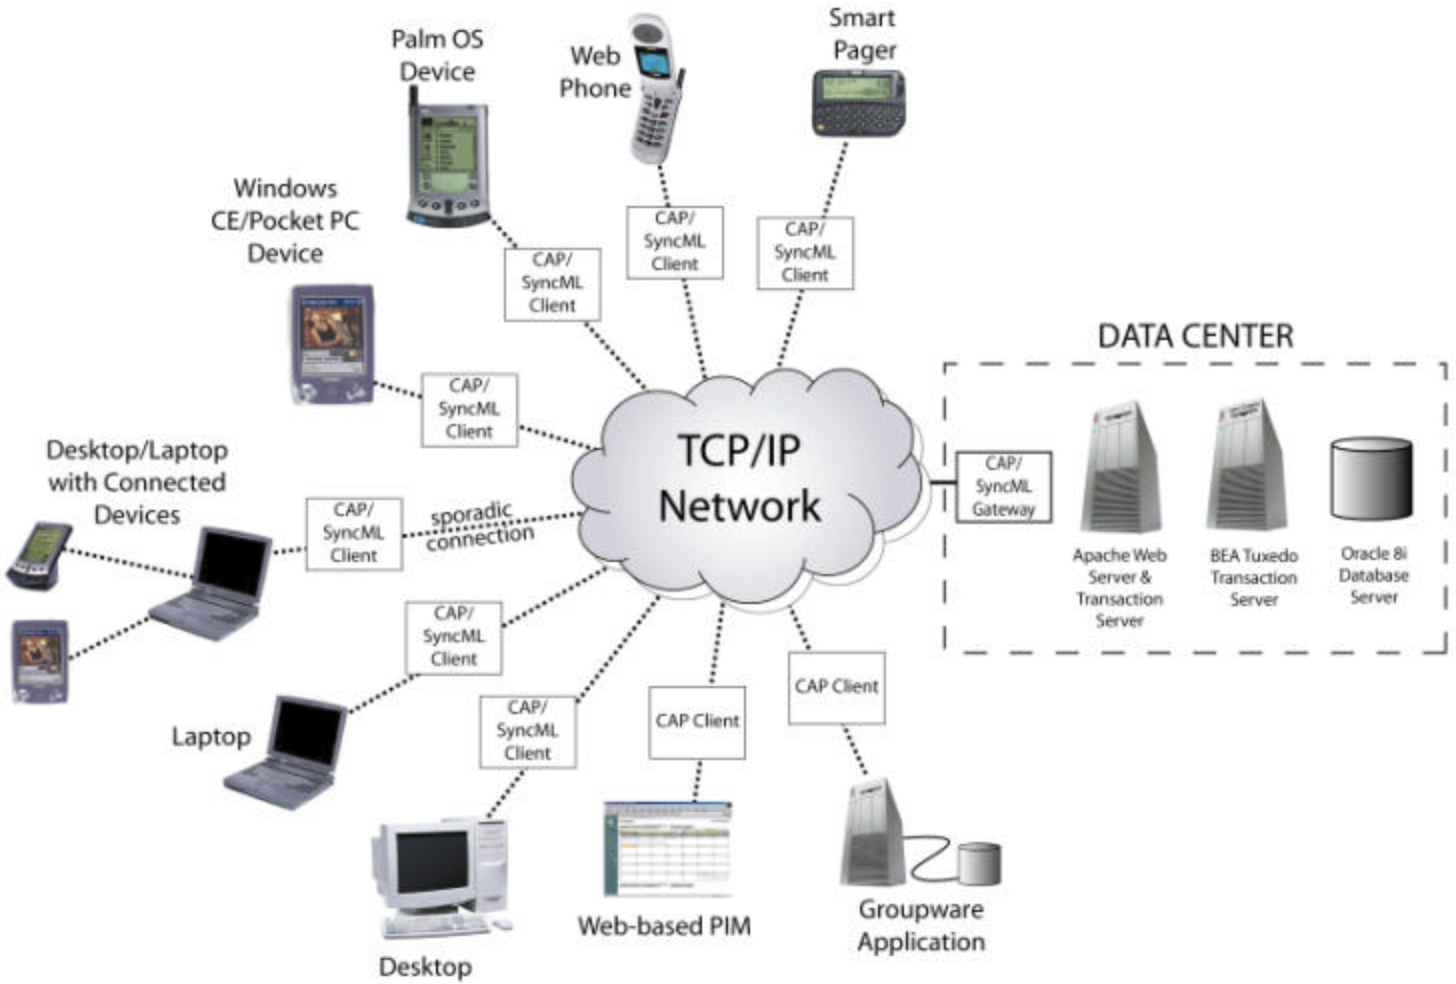

The Need for Sync

- A wireless economy with ubiquitous mobile devices requires a highly scalable Internet-based synchronization solution that must:
  - Be extremely reliable
  - Be highly scalable (millions of users)
  - Be secure
  - Use HTTP-based protocol
  - Support applications and devices in use today
  - Take sporadically connected device collections into account

The Solution: Sync-It

- Designed from scratch using best-of-breed components
  - Solaris
  - Apache Web Server
  - Tuxedo Transaction Server
  - Oracle 8 database
- HTTP-based protocol for firewall transparency
  - CAP protocol today
  - SyncML as soon as it is final

Sync-It—Hub and Spoke Model

Sync-It—Cont.

- Supported sync points (today):
  - Outlook
  - Outlook Express
  - Palm™ Desktop
  - Palm Devices

  - Sync-it SDK to develop new device or server sync points

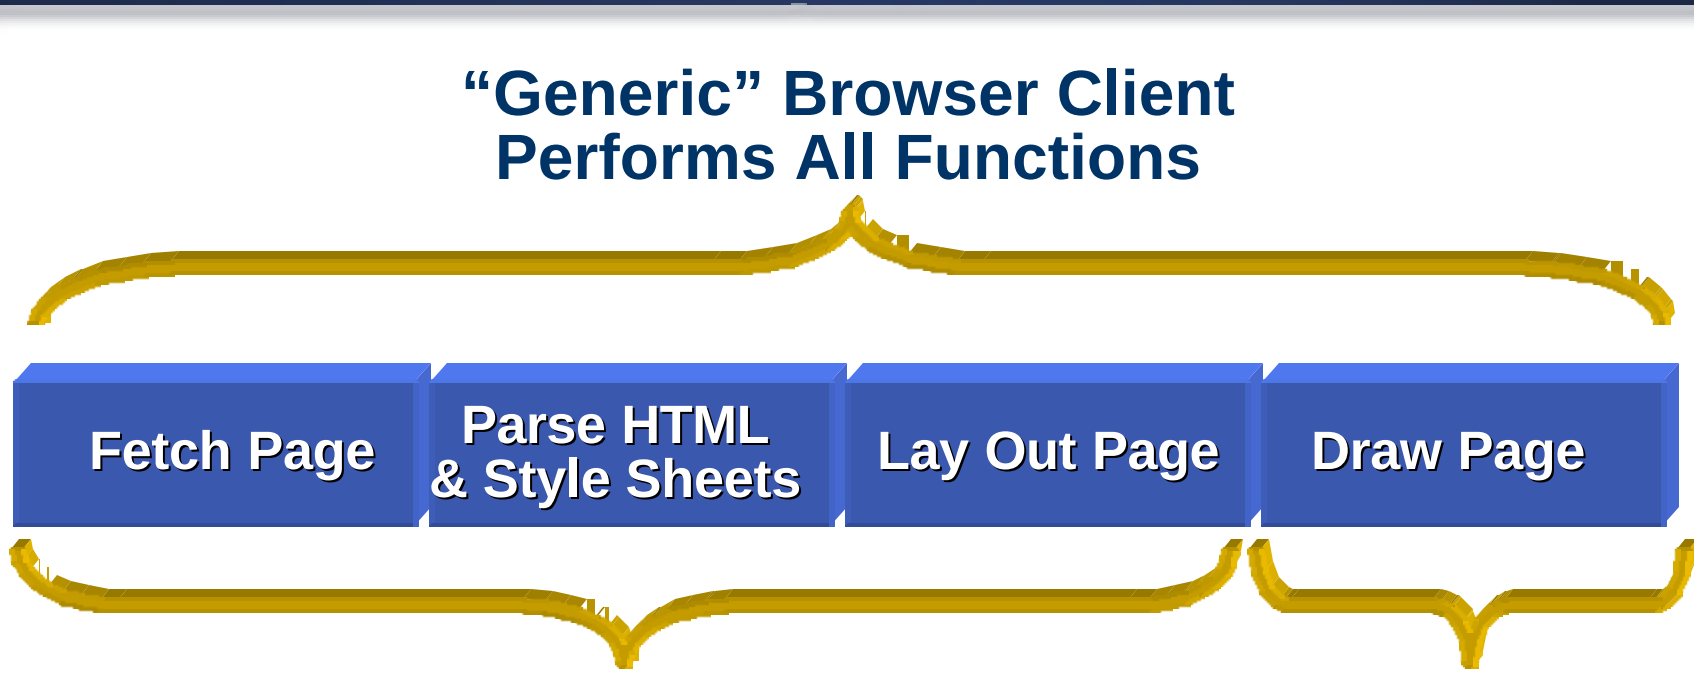

The Need for Browsing

- The Web is an extremely valuable and diverse resource. Any complete mobile solution must address accessing it from mobile devices. To be an adequate solution, browsing solutions must:
  - Have a small memory footprint on device
  - Perform well over wireless networks
  - Be able to view non-reauthored sites
  - Support offline operation
  - Be highly scalable
  - Be secure

The Solution: Browse-It

- HTML browser for Palm™ devices
- Automatic transcoding for viewing with small devices
- Encryption using Certicom ECC
- Supports offline viewing and form submission (SnapShot)
- Architecture optimized for mobile devices
  - High performance over wireless networks
  - Very small footprint on device (about 200KB)

Browse-It: Wireless Architecture

Browse-It

- Create browser-based applications for mobile devices
- Create content-channels for delivery to mobile devices

The Need for Alerts

- Surfing the Web for long periods of time on small mobile devices, with their slow networks and complicated input methods, can be slow and tedious. Alerts can help by minimizing the need for unnecessary user interaction:
  - Alerts for important / time-sensitive information
  - Personalized / relevant information only
  - Customizable (interface and notifications)
  - Must be highly scalable!

The Solution: Mind-It

- Granular HTML page monitoring (“minding”)
- Notifications through a variety of mechanisms
  - Email, SMS, WAP Alert, Voice (soon)
- Easily customizable
  - Embeddable as an “Enabling Technology”
- Proven scalability
  - 7.5 million users
  - 200,000–1.5 million email messages a day

Mind-It

- Embed alerts into existing solutions
- Personalize content for delivery on handhelds

Demos

Business Model

How Is MAP Sold?

- Affiliate Program (Sync-it only)
  - Plug into our Intellisync.com site
- ASP
  - Co-branded / Private Label UI
  - Hosted at Pumatech data centers
- Licensed
  - Private Label
  - Self-hosted

The Future of MAP

New Features

- More devices
- Progressive sync
- Collaboration features
- SyncML
- Custom data sync
- Actionable voice alerts
- More “mindable” data types

The Future of MAP

Possible New Components

- File management
- Software deployment and management
- Content aggregation
- Others ??
- Third party ??

accelerate

collaborate

innovate

communicate
