Conference 2000

Palm@Palm
Palm™ Solutions at Palm Inc.

Jesus B. Mantas
PricewaterhouseCoopers

PalmSource
Conference 2000

Session Objectives

- Share information about Palm internal use of Palm technology to enable business functions
- Provide a holistic view of a common use of Palm in the enterprise
- Outline the components of the solution, and the process to implement it
- Highlight lessons learned and critical success factors that you can leverage

Agenda

- Envisioning a “Palm-enabled” enterprise
- Palm@Palm Program Mission and Objectives
- Scope and Implementation Approach
- MyPalm@Palm, a comprehensive “Behind The Firewall” Enterprise Solution
- Palm@Palm Architecture Overview
- Present and Future of Palm@Palm Program

PalmSource Conference 2000

Envisioning a Palm-Enabled Enterprise

PalmSource

Conference 2000

“Palm-Enabled” Enterprise

Efficiency Via Smart Use of Palm Technology

- What if people could perform business functions from their Palm handhelds? Like manage their email, approve purchases, schedule meetings, read reports, complete trainings, or access any company-relevant information?
- What if we could ease people’s administrative overhead? Like enabling expense reporting or travel itineraries on their Palm handhelds
- What if we can improve customer loyalty by letting our customers do business with us from their Palm handhelds? Or improve our bottom line by letting our suppliers use Palm handhelds to share more accurate information with us?
- What if we use Palm technology to add value to the enterprise?

PalmSource Conference 2000

“Palm-Enabled” Enterprise

The Enterprise Difference

- Deploying enterprise solutions is not just installing Palm applications in an enterprise environment
- The Solutions implemented must pursue creation of enterprise value to be relevant.In most cases, the value proposition for the solutions is based on:
  - Increased Productivity
  - Increased Revenue
  - Decreased Cost
  - Increase Customer Loyalty
- It must conform to enterprise-class security policies
- It has to be Industrial-Strength, and supported at the same level as other enterprise systems

Palm@Palm Program Mission and Objectives

PalmSource Conference 2000

Palm@Palm Mission

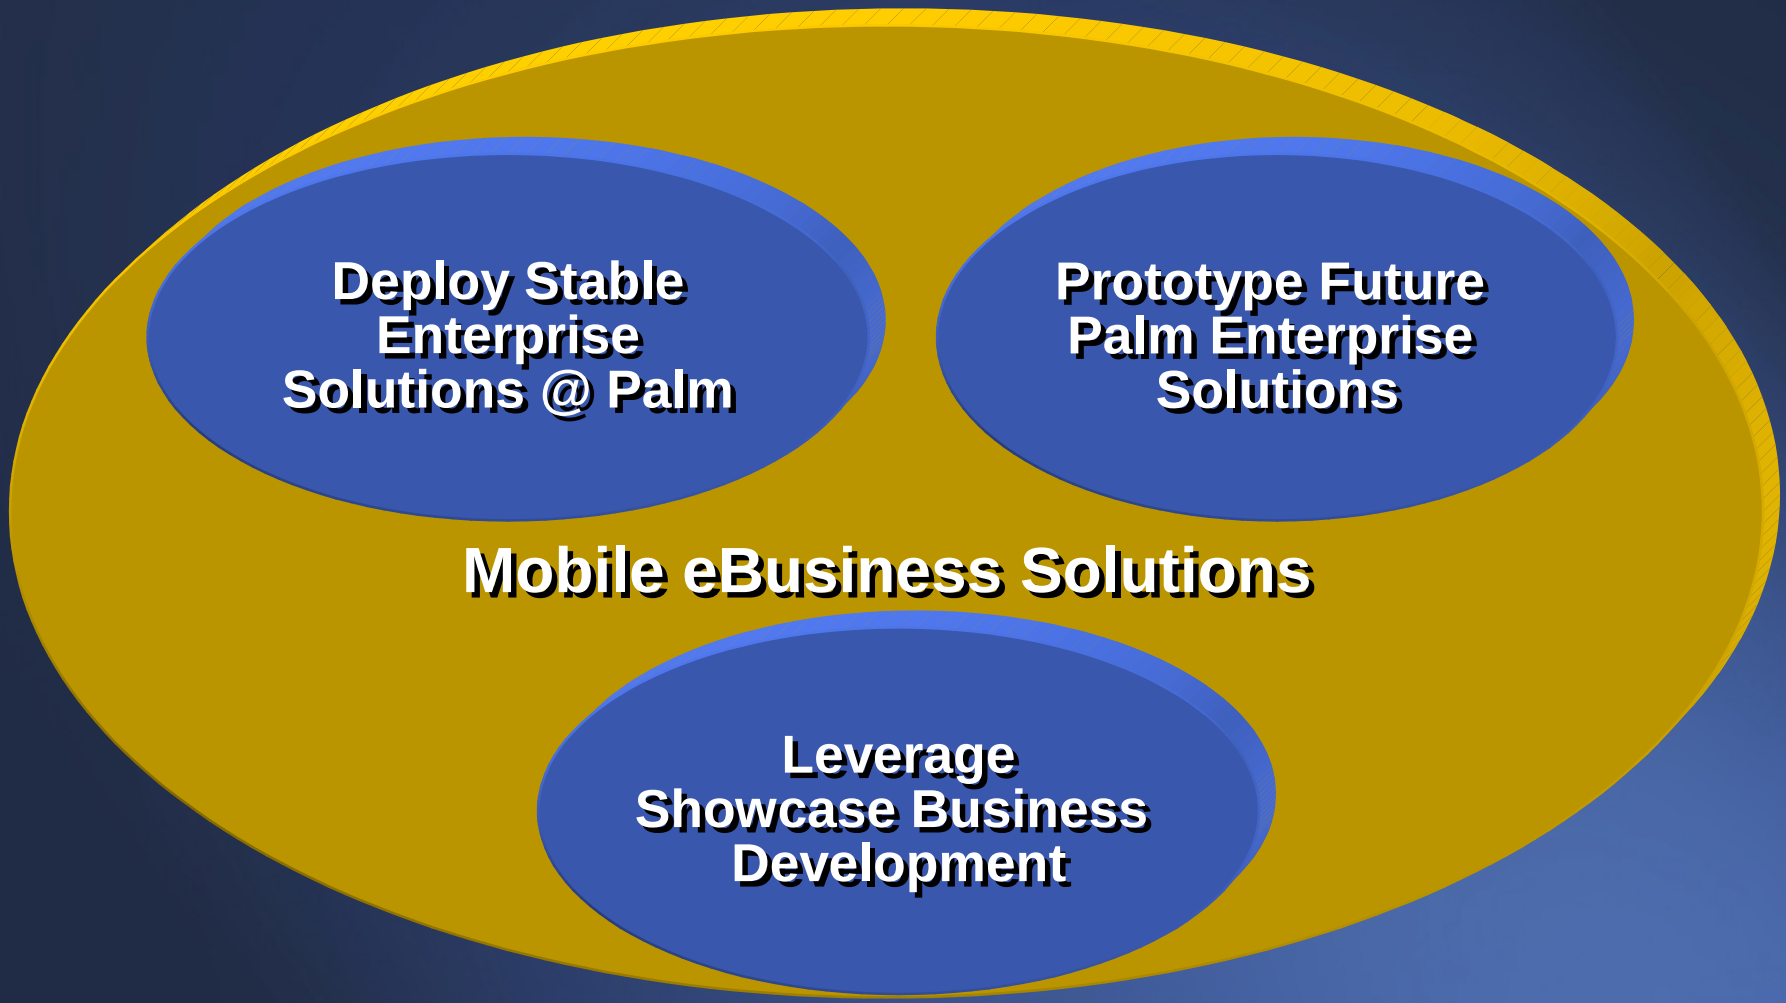

Palm IT had the vision, means, motive and opportunity to showcase Palm technology in the enterprise. The program officially kicked-off on March 2000 with a simple mission:

“To create a Palm-enabled enterprise internally within Palm”

“To showcase Palm’s products and technologies to other enterprise customers”

PalmSource Conference 2000

Palm@Palm Objectives

Palm@Palm: Guiding Principles

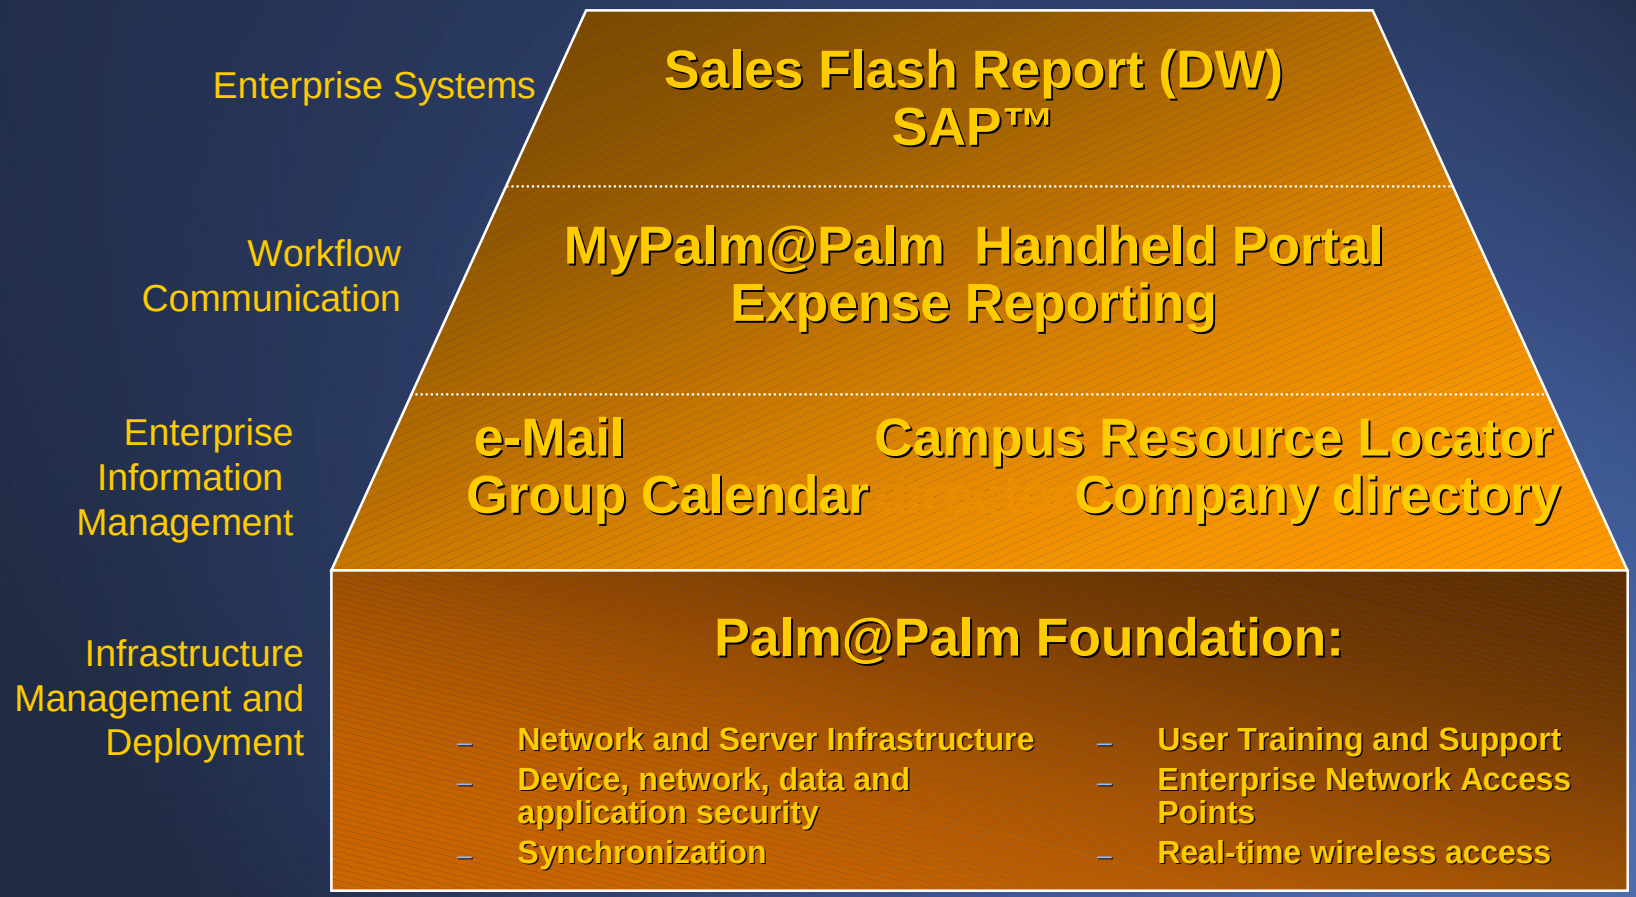

- Streamline user experience of mobile enterprise applications: apply the Zen of Palm to the enterprise space
- Component-based architecture: Define components and implement applications that fit into the architecture
- Avoid developing custom products unless no alternative solution is found
- Leverage software partners to improve products, integration partner (PwC) to assemble the solution

PalmSource Conference 2000

Palm@Palm Scope and Implementation Approach

PalmSource
Conference 2000

Palm@Palm Functional Scope

PalmSource Conference 2000

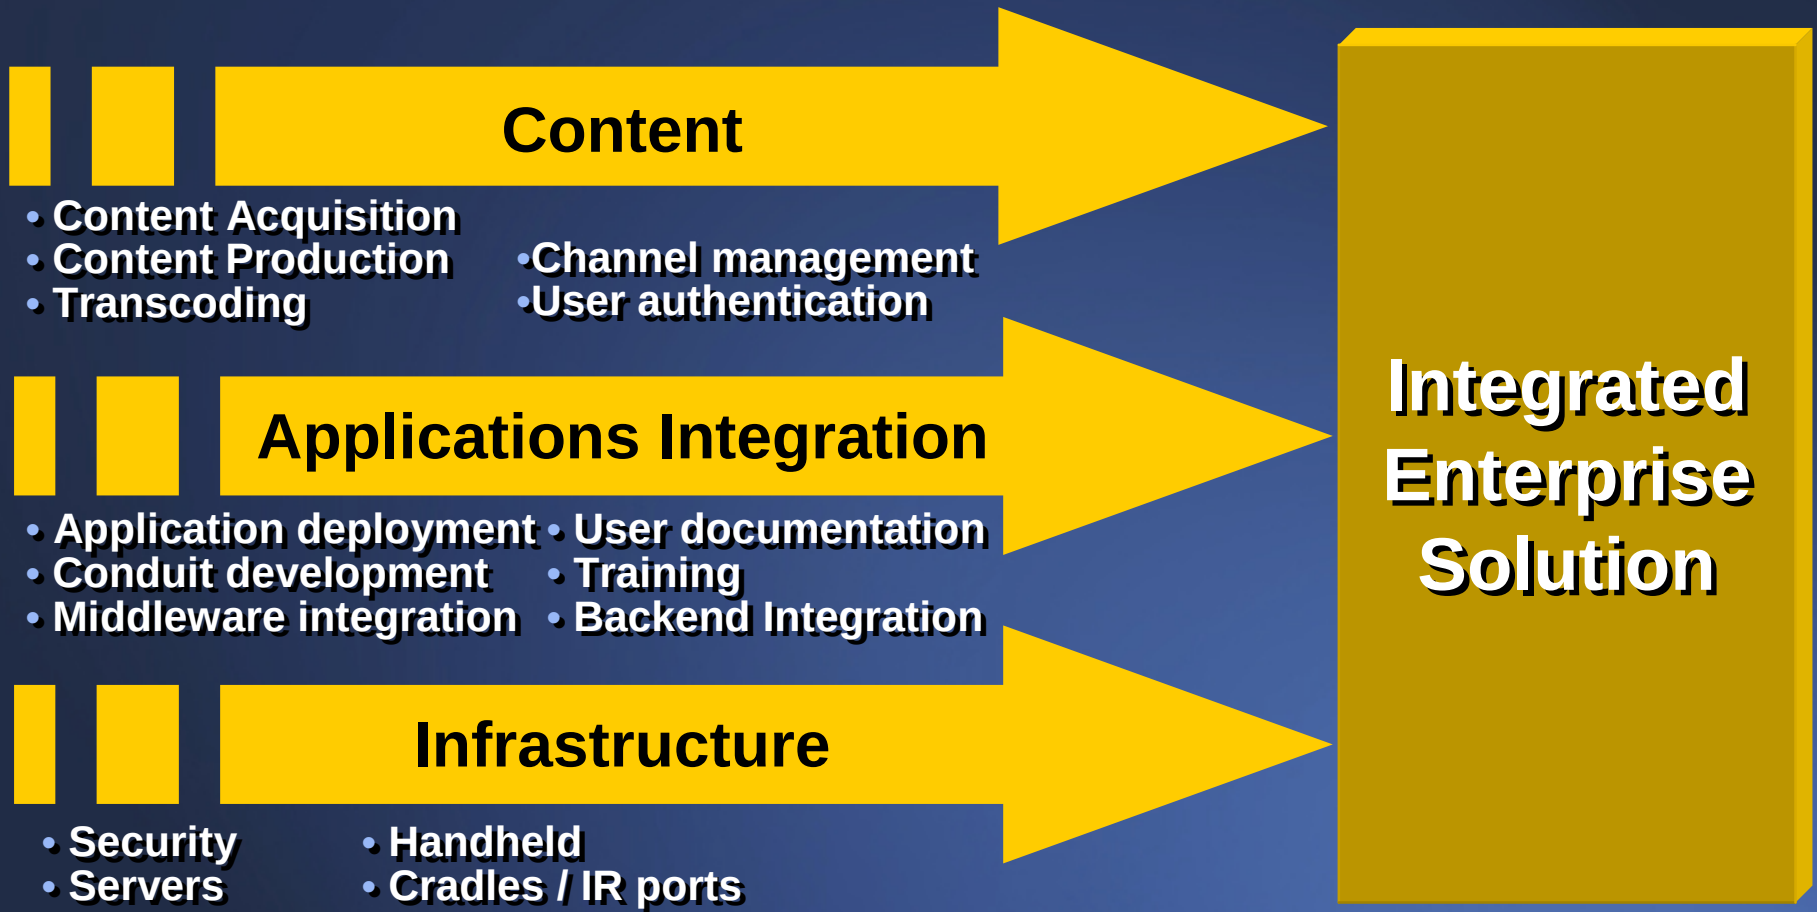

Palm@Palm Scope

Quantifying and Qualifying the Effort

- Levers of Scope:
  - Applications and Integration
    - Business Functionality
    - Packaged Applications
    - Development / Integration
    - Interfaces / Conduits
  - Organization, Process and Change Management
    - Team and Users
    - Geography
    - Training and Support
  - Content
    - Internally produced content
    - Externally procured content
    - Graphics/Template development
  - Technology Infrastructure (Pilot + Production)

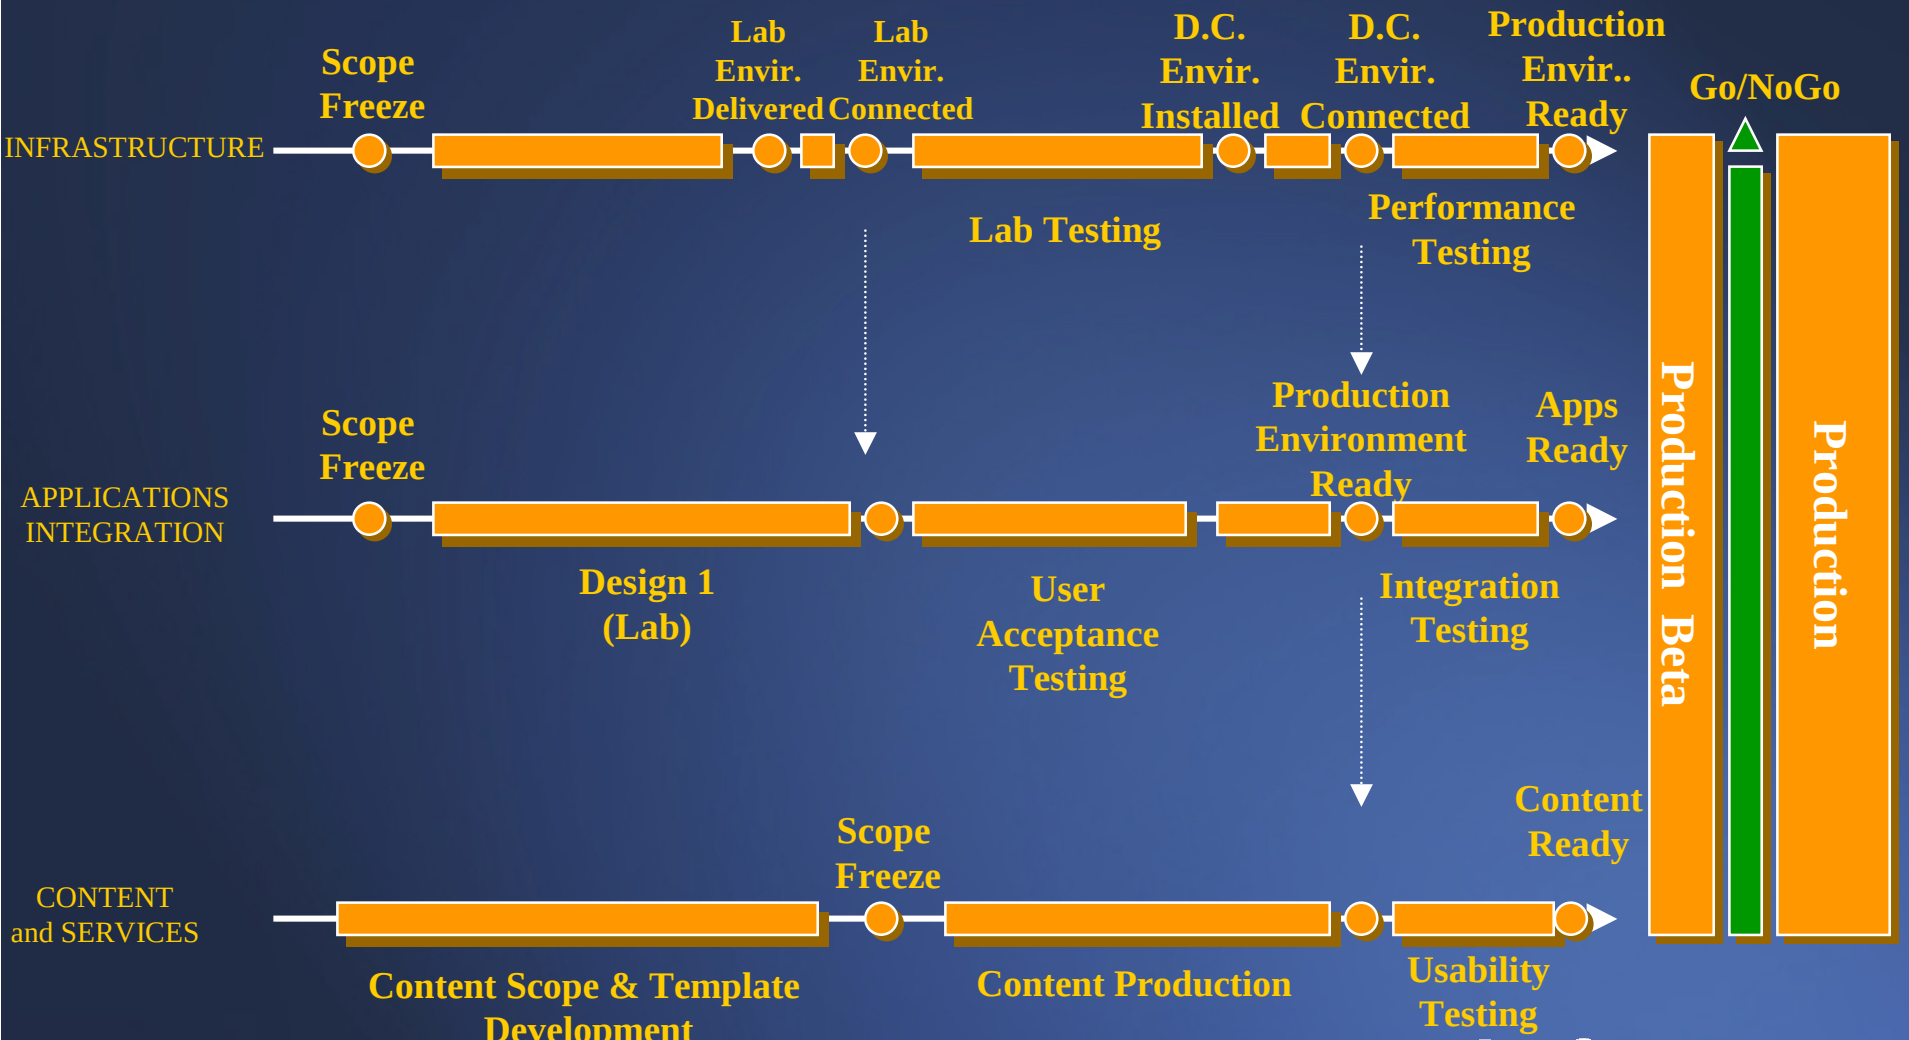

PalmSource Conference 2000

Implementation Approach

PalmSource Conference 2000

Sample Delivery Plan (Illustrative)

PalmSource Conference 2000

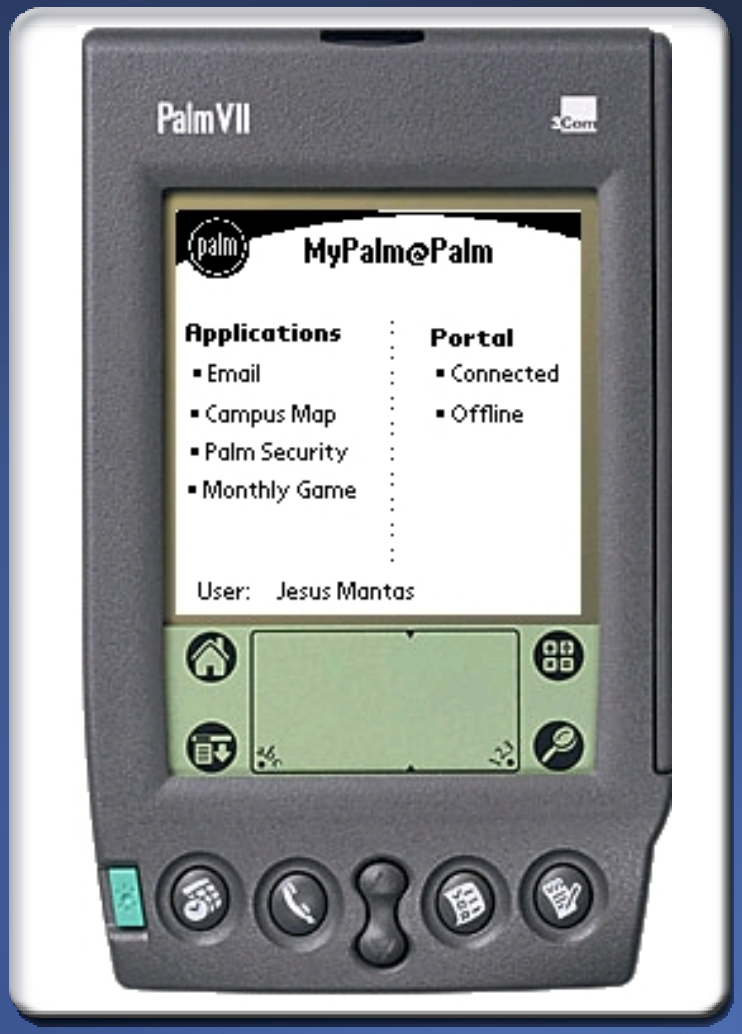

MyPalm@Palm: a Comprehensive "Behind-the-Firewall" Enterprise Solution

PalmSource

Conference 2000

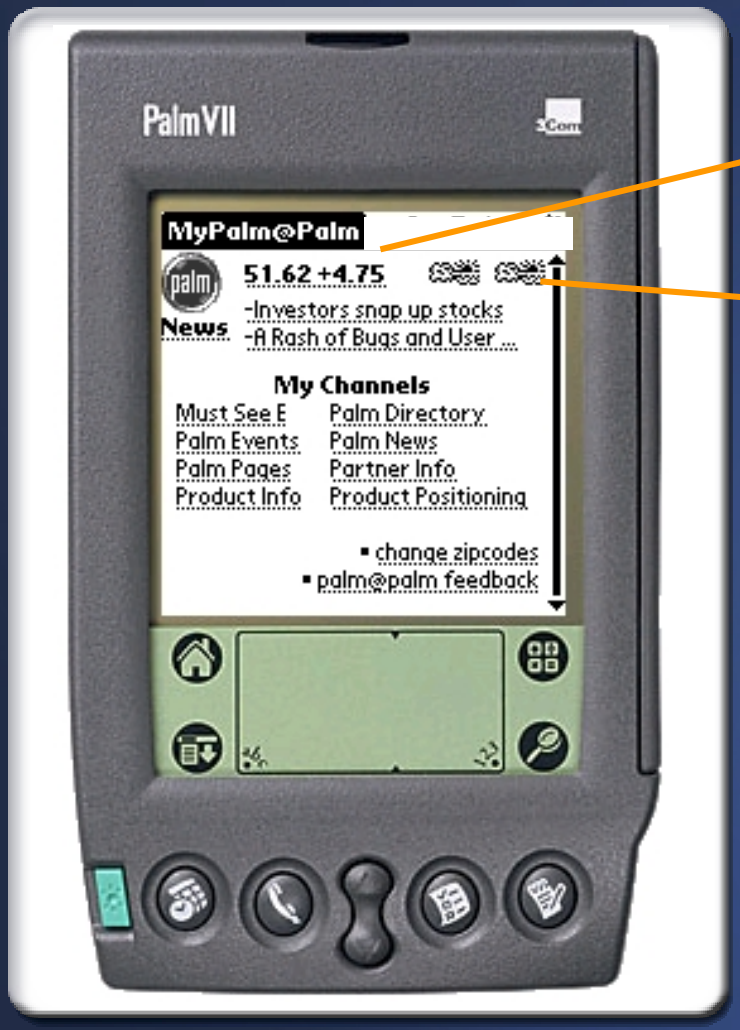

MyPalm@Palm: Enterprise Launcher

- Simplifies user experience
- Provides additional security and self-registration function
- Enable “intelligent” software deployment. New or Updated apps are automatically installed
- Simplifies management and support (single application for all supported devices)

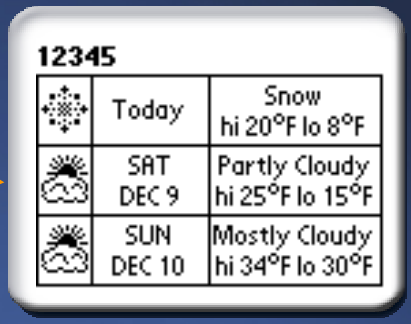

PalmSource Conference 2000

MyPalm@Palm: Home Page

- Dynamic main page, updated real-time when accessed wirelessly, and personalized by user
- Offers real-time and off-line access to portal information and services
- Aggregates access to internal and external content, including enterprise systems

PalmSource Conference 2000

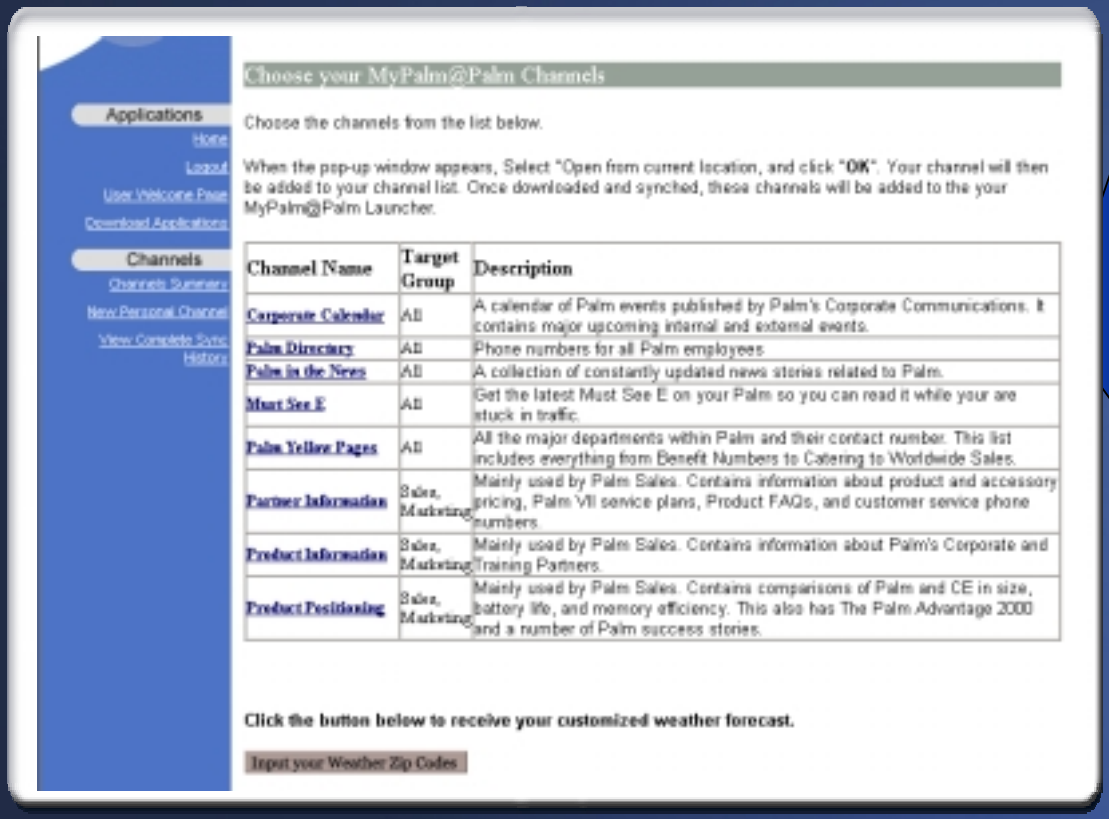

MyPalm@Palm: Handheld Content

…Content Is King … Everything Else Is a Mean to an End

- Typical intranet content and services
  - Directory, Events Calendar, Company-wide communications
  - Personalized Weather, Traffic, Financial, News.
  - Department Dashboards, Monthly Communications, Team and Group intranet sites
  - Sales, Marketing and Competitive information
  - Training and certification programs
- Aggregated and transcoded content from the internet
  - Financial benchmark internet sites
- Access to enterprise systems
  - Customer, material, Order Status and ATP from SAP™
  - Real-time reports from Business Objects™
- Personal interest
  - Ability to add any URL as a personal channel

MyPalm@Palm: Handheld Channels

Content and services are organized in channels. The content management process for the handheld channels is the same as for any other intranet content, simplifying the edition process

Input your Weather Zip Codes

PalmSource Conference 2000

MyPalm@Palm: Personalization

- Allows individual selection of enterprise channels
- Users can also create new personal channels
- Ability to localize content by geography

PalmSource Conference 2000

MyPalm@Palm: Secure User Provisioning

- I am Sold! I want it …
- … I have my own Palm device …
- … I have enough free memory ...
- … I have wireless connectivity ...
- … how do I get the Palm@Palm functionality? Who has to authorize me?

PalmSource Conference 2000

MyPalm@Palm: Secure User Provisioning

STEP 1: Download of Applications

Users login to Palm@Palm Web site with their network password

Web site guides them through the options, and the software is automatically synchronized in their Palm device

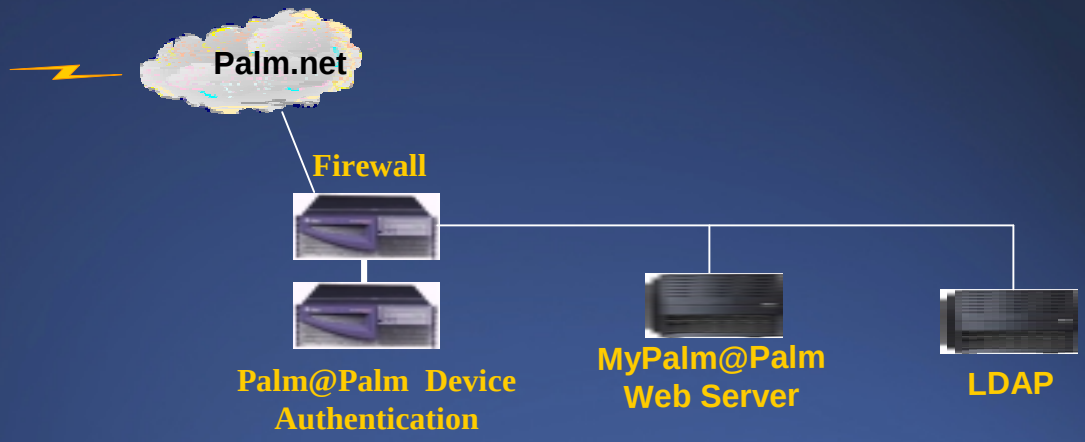

PalmSource Conference 2000

MyPalm@Palm: Secure User Provisioning

STEP 2: Wireless Registration

Users enter user id and password in MyPalm@Palm, and tap on the wireless registration function. The information is encrypted (SSL) and submitted via Palm.net

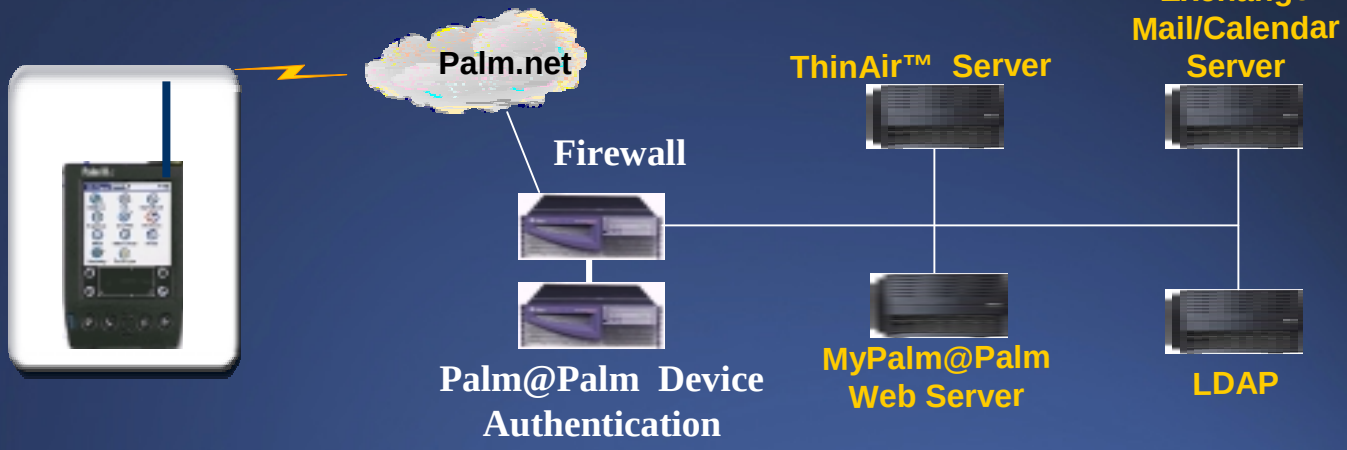

The Palm@Palm Authentication Proxy detects the request for registration, and forwards to MyPalm@Palm Server

Server validates user id and password against LDAP. If valid, it registers the serial number of the device in LDAP. User receives a “succesful registration” message

MyPalm@Palm: Secure User Provisioning

STEP 3: Use it!

Only registered devices are authorized through the network. The Palm@Palm authentication server constantly check against LDAP for valid device ids. The security check is totally transparent to the user

Mail, enterprise systems and sensitive channels require additional user id and password to access application

If a handheld is lost of misplaced, OnlyMe protects the information cached in the device. Serial numbers of lost devices can be immediately removed from LDAP, which prevents unauthorized access

Palm@Palm: Present Status and Future of the Program

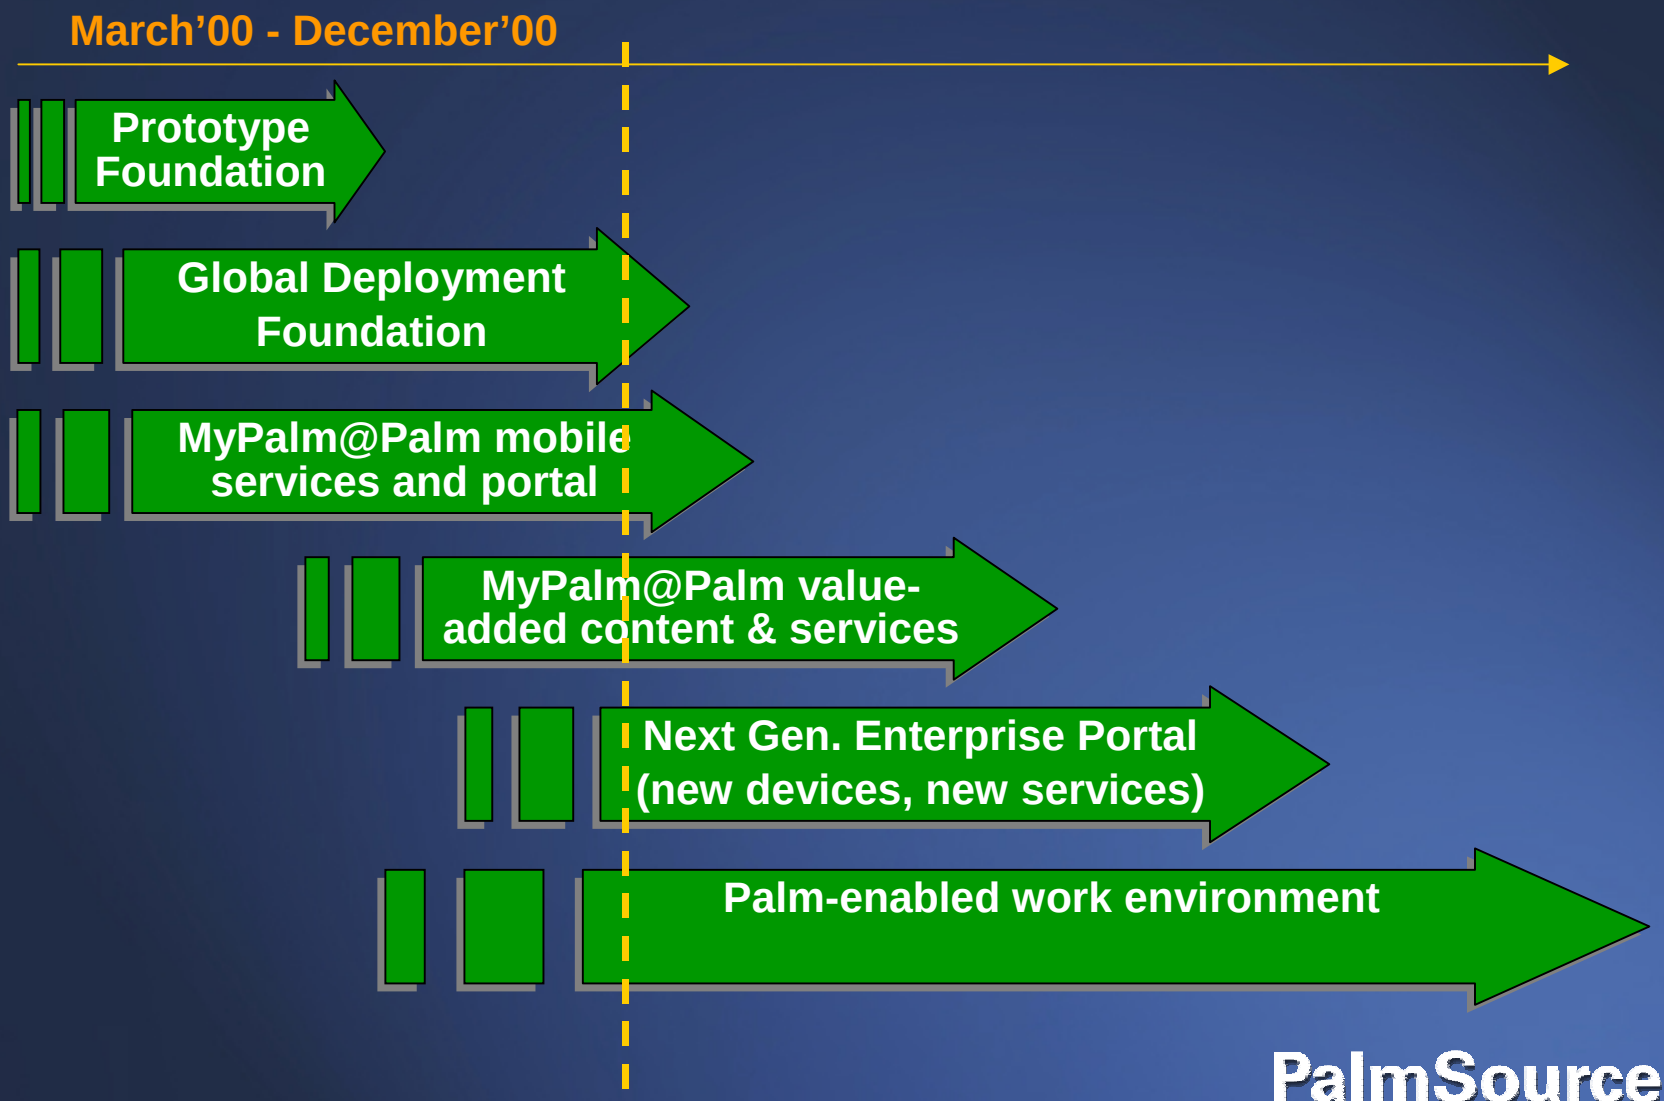

PalmSource

Conference 2000

Palm@Palm: Status

- Program started March'00
- Pilot functionality went live in June'00
- Currently being deployed:
  - Multimail, Device Security, Outlook synchronization and Mobile Internet Kit globally
  - ThinAir Groupware 1.2 in the US for Mail/Calendar over Palm.net
- Currently finalizing and testing
  - MyPalm@Palm portal, including single sign-on with LDAP
  - Full campus map and resource locator with Nearspace
  - Integration of mySAP.com, data warehouse mobile workplace
- Full support of handheld functionality via 24x7 helpdesk

Palm@Palm Scope: Applications / Integration

In Scope

- Business Functionality
  - E-mail anywhere
  - Calendar anywhere
  - Expense Reporting
  - MyPalm@Palm Enterprise Portal
    - Self-registration of device
    - Online and Offline browsing
    - Directory
    - Campus map and resource locators
    - Executive “Flash” Reports
- Packaged Applications
  - MultiMail Pro
  - Chapura PocketMirror
  - AvantGo
  - ThinAir
  - OnlyMe™ (Tranzoa)
  - Mobile Internet Kit
  - Nearspace
  - Clickmarks
  - ExpensePlus™ (Walletware)
  - HotSync™ Server
- Development
  - Palm@Palm portal web application
  - Palm@Palm Registration and Provisioning Web Page
  - MyPalm@Palm launcher application
  - Wireless Self-registration
  - mySAP mobile workplace (SAP Labs™)
  - Business Objects™
- Interfaces / Conduits
  - LDAP- AvantGo integration
  - LDAP - Web Application

Palm@Palm Scope: Organization

In Scope

- User community
  - All Palm employees and contractors
- Geographies / Business Units
  - Phased Regional deployment: US/EMEA/APR
- Training and Support
  - Technical training cheat sheets for Helpdesk/Technicians.
  - Technical procedures for Technicians
  - End-user training cheat sheets
  - Ergonomics for MyPalm@Palm
  - Palm@Palm Operational support, leveraging Palm enterprise support organization
