Palm Sales to Education

School Year 1999–2000

% of Sales to Education Market Based on Registration Cards

Education Handheld Adoption

Higher Education Market Research

Students and Faculty as Individuals

- 32% use cellular phones
- 58% use graphing calculators
- 16% use pagers
- 90% of dorm rooms connected to Internet

Students and Faculty in Networked Communities

- Percentage of universities with intranet content
  - 86% course catalog
- 86% library catalog
  - 58% instructional software
  - 52% registration

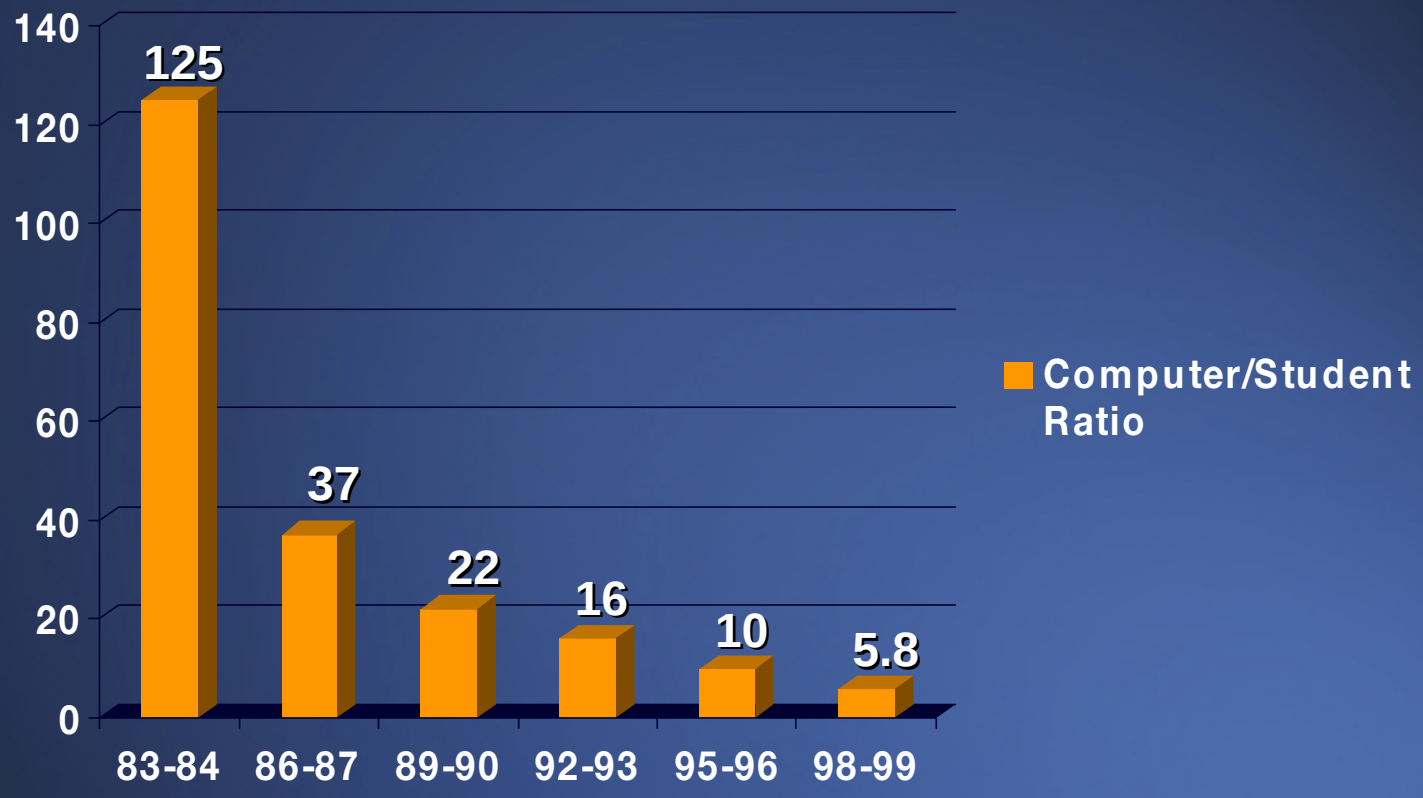

Integrated Learning Environment 1:1 Computing

- Current educational expenditure of $600B
- Technology, textbook and instructional materials market= $16b annually (U.S. only)

Palm's Competitive Position

Competitor	Intention	Strengths	Weaknesses
Microsoft & CE Partners	Anytime-Anywhere Learning (notebook)	Leveraging PC installed base and apps	Limited WinCE penetration Expensive in this Mkt Sub Notebook failure
PC Vendor Notebooks	"Full solution, single source" important	Full function, established in market	Battery Life Lack of wearability Expensive
Single-Use Device	Will add organizing capabilities	Curriculum Solutions	Price/Performance low Limited to specific subject areas

Education Solution Development

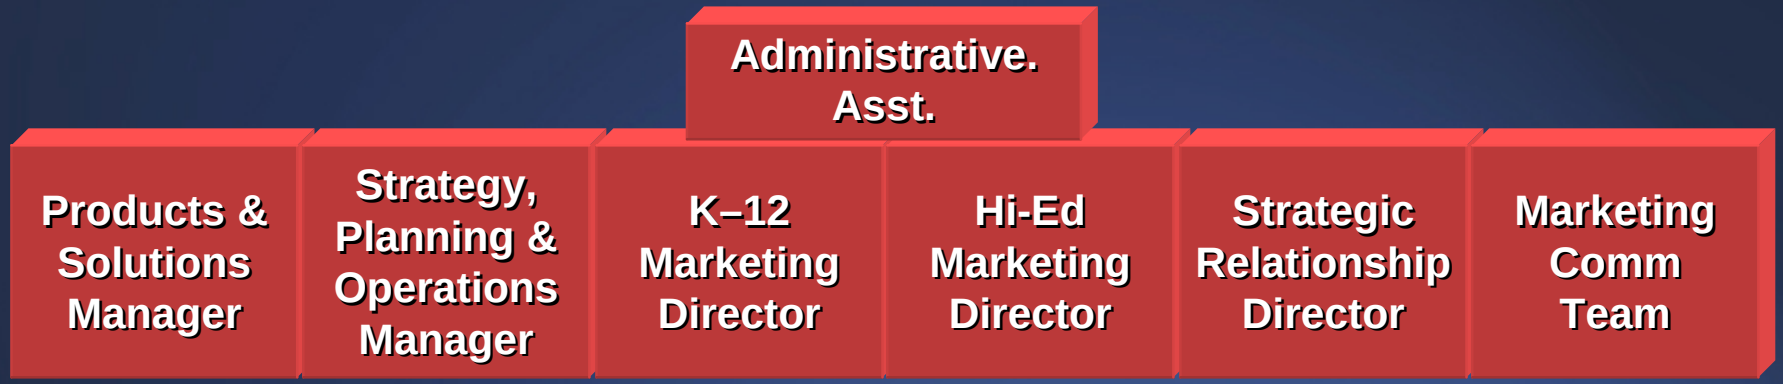

Diverse Future Handheld Directions

- Color^2
- Robust System expandability
- Pervasive Internet connectivity
- Bluetooth
- Robust Authoring tools
- Multimedia capabilities

Education Market 3-Year Objectives

- Create broad based awareness and demand for Palm solutions in K–12 and Higher Ed Markets worldwide
- Drive Palm Education Economy development and “go to market” model
- Develop an Education Friendly Product line (Devices and WIS)
- Establish strong strategic relationships with key influencers

Palm's Education Team

Marketing Communications

ON A COOL, wet afternoon, Katy Fitzpatrick and Erin and Kelsey Donovan join their fifth-grade teacher, Kelly Rogers, at Pickle Pond, near Farley Elementary School in Hudson, Massachusetts. Tiptoeing through the droplet-dappled underbrush, the girls notice how lush the vegetation has grown since their last visit and that the level of the tea-colored water in the pond has risen. The students begin taking notes, making predictions about the water temperature and other conditions, testing those assumptions with wand-like sensor probes, and drawing sketches of the area, all on their 3Com Palm Pilot III handheld PCs. They'll download the information later for analysis against earlier observations.

The mini field trip is part of a novel pairing

The hottest idea in education is getting computers out of the classroom—and into students' hands in the field.

Hand-Held Computers Go Educational as Producers See Lucrative New Market

By Pui-Wing Tam

Staff Reporter of The Wall Street Journal

WHEN A MICHIGAN student told Francine Benion, an inner-city high-school principal in Smithtown, N.Y., that he had an extra free period one day, she suggested the teenager watch television.

Pulling out a sleek device that looked like a Palm hand-held computer, Mr. Benion decided to find out for sure. She recorded the student's name into the gadget using a stylus, and his class schedule popped up on the screen. "It says here that you belong in English right now," she told the boy, next to his chagrin. "Get the book you [garner]," she said, pointing him toward the right classroom.

That kind of scene isn't unusual, says Mr. Benion. In a pilot program over the past school year, about 30 Smithtown High School teachers and administrators have used hand-held computers to do stuff they usually do with pen and paper. Teachers used them to take homeroom attendance, for instance. And by equipping the school's 2,400 students with bar-coded identity cards, faculty members could also use the devices to check each student's class schedule.

"They've been terrific," says Mr. Benion, noting that the Smithtown staff is ready to use them to help keep academic records as well. "They help us finish tasks quickly so we can increase our time on instruction."

With the new school year just around the corner, makers of hand-held computers are trying to replicate the school market with pilot programs like that at Smithtown High School. The goal: Get Palm-style contraptions to faculty members, sell them to every single student and turn the hand-held computer into a dominant piece of classroom technology.

Smithtown High School purchased its gadgets from Symbol Technologies Inc., a Holtsville, N.Y., electronics company that manufactures hand-held devices for schools using wireless technology and Palm Inc.'s operating system. That year, Symbol Technologies is expanding its reach, selling gadgets to about 30 school districts from New York and Texas to California, up from just five districts last year.

The education market is the newest battleground for hand-held-device makers, and the stakes are huge. According to the U.S. Department of Education, there were 46.1 million students enrolled in everything from elementary

mobile work force," so the education market is almost as large and potentially as lucrative, says Mike Lorton, Palm's vice president of education.

Barry R. Lorton, vice president of health care, education and hospitality at Symbol Technologies, says hand-held devices sold to schools currently make up only a tiny percentage of the company's revenue, but he anticipates the education market will eventually generate $250 million in sales a year and form a double-digit percentage of Symbol Technologies' revenue. "There's an explosion of activities in schools right now," Mr. Lorton says. "A device in the hands of every student [makes] the [big deal]."

and fell $200 to $68 and are more affordable for many schools. Developers such as ImageWorks Inc., San Mateo, Calif., are also creating more school-oriented applications, such as graphing calculators and chip-on probes that measure temperature, pH levels and voltage for use in science and math courses.

Palm is aiming to equip schools with software as well as software. In March, the handheld Clues, Calif., company set up an education unit and hired Mr. Lorton, a former Apple Computer Inc. executive, to head the division. To start spending the back-to-school market, Palm rolled out a free coupon that a few weeks ago that contains 21 educational and more applications, including a thesaurus and
