Will the Development Community Please Approach the Bench

Chad Roberts
CEO, PDA Verticals Corporation

PalmSource
Conference 2000

Introduction

- Handheld computers are quickly becoming standard tools for professional users
- Deployments in enterprise environments will ultimately exceed those to individuals
- Consumers in these markets have specialized needs that are currently not entirely being met
- First-movers in these markets have the opportunity to establish a dominant position in the marketplace

The Market for Dedicated Portals

The Legal Environment

- Broad user group with unique characteristics
  - Over 4 million professionals in the legal market
  - High income, providing a potential adoption rate much higher than the market average and users that are much less price sensitive
  - Time constrained professionals proven users of time saving technology
  - Interested but unsophisticated users, making them open to new technologies but less likely to seek their own solutions
  - Conduct a significant part of their work away from the desktop

The Market for Dedicated Portals

The Legal Environment

- Among professional users time, not price, is the most important consideration
  - Billable hours are the key revenue driver for most professionals
  - Rate at which time is charged far outweighs potential savings of shopping around
  - Purchase decisions easily quantifiable in economic terms

If TIME * RATE > COST then purchase

The Market for Dedicated Portals

The Legal Environment

- The more specialized the audience, the more specialized the product offering
  - Industry-specific content
    - Articles
    - Success stories
    - Discussion
  - Industry-specific applications
    - Time tracking and billing
    - Scheduling
    - Contact management
  - Specialty/location specific
    - Solutions by state
    - Solutions by area of focus

PDAJD.com Design Philosophy

What Is the Market Being Addressed?

- Who uses PDAJD?
  - Individual legal professionals (over 15,000 registered users and growing)
  - Law firms (Roberts, Sheridan & Kotel)
  - Students and educators (Stanford Law)
  - Corporate legal departments

PDAJD.com Design Philosophy

What Do They Want to Buy?

- Develop an in-depth understanding of the end user and the market
  - What are current, identifiable problems (what barriers exist in the flow of information)?
  - What is the economic cost of these problems (how many billable hours are wasted dealing with these barriers)?
  - Which existing products offer a credible solution?
  - How can we create or facilitate the creation of products that are currently nonexistent?
  - How can we make solutions easy to find?

PDAJD.com Design Philosophy

How Can We Best Provide It to Them?

- Visits are important, but “stickiness” can be an advance indicator of failure
  - Lengthy sessions can be the result of confusion
  - Design goals are “three deep” and “five and out”
  - Ongoing effort to streamline the process
  - Refine offering to match the needs of the users

PDAJD.com Design Philosophy

Do We Understand the "Money Value of Time"?

- Each visit by a customer has an associated cost to that individual
  - How much time is a visitor expected to invest?
  - What are the alternative uses of that time?
  - What is the value of that time?

- Do we provide a compelling economic benefit?

PDAJD.com Design Philosophy

The End Result

- Industry specific
- Content driven
- Simple navigation
- Dedicated solutions

PDAJD.com Design Philosophy

Building From Here

- Work with industry participants to expand the presence of mobile and wireless information to educate a new group of handheld users

What It All Means for Developers

Creating Applications for This Market

- The dynamic for developing applications is much the same as we experienced building the PDAJD portal
  - Specialized users need specialized solutions
  - One size does not fit all
  - The value is easily quantifiable

What It All Means for Developers

Selling Into This Market

- Selling into the emerging professional markets requires a new approach
  - High-price/low-volume sales are the norm
  - Corporations and not individuals will drive orders
  - Marketing channels must be focused
  - Partnerships with existing participants will be key to building market awareness
    - Leverage sales forces already in the field
    - Integrated solutions will have an edge in the marketplace

What It All Means for Developers

Opportunities After the Sale

- Highly profitable upgrade business
  - Enterprise purchasers familiar with the upgrade cycle and comfortable paying for improvements
- Product Add-ons
  - Popular base applications provide a platform to sell ancillary products and services
- Custom development projects
  - Recognized solution providers will have an advantage in securing custom development contracts

Conclusion

- High revenue markets populated by enterprise customers are developing
- Growth of these markets and growth of solutions are symbiotic
- Participating in this growth requires a new approach
- Partnerships and integrated solutions will provide key advantages
- First movers will assume a higher level of risk but have the opportunity to dominate
