COM Sync Suite Lab

Ravi Duggaraju
Developer Tools

Tasks

1. Write a conduit in VisualBasic using COM Sync Objects
2. Register Conduit
3. Run Conduit
4. Debug Conduit
5. Convert from EXE to ActiveXDLL

Writing a Conduit

1. Write a COM Conduit

   Use sample from
   C:\CDK402b\Com\Samples\Tutorial\SimpleDb

Create a Conduit – Steps

1. Create a VB Form
2. Open Memo database, read records, search for a string
3. Display results

Register Conduit – Steps

1. Run CondCfg.exe from C:\CDK402b\Common\Bin\C4.02
2. Register our Conduit with HotSync®
3. Choose “COMConduit”, input our Conduit path in COMClient field

Debug Conduit

1. Run CondCfg.exe
2. Click on LabConduit details
3. In COMClient field, input - C:\Program Files\Microsoft Visual Studio\VB98\VB6.EXE
4. Start Sync session from Emulator
5. Place break points and run our Project

Convert to ActiveXDLL – Steps

1. Convert Project type to ActiveXDll in VB project properties
2. Create a new class
3. Implement IPDClientNotify
