Platform Security Roadmap

Waddah Kudaimi, Manager, Security and OS Services,
Palm OS® Subsidiary

Agenda

- Objectives
- Platform goals.
- Problems to solve.
- Current features.
- Palm OS® 5 features.
- Roadmap.
- Feedback and Q & A.

Objectives

- Tell you about the platform future security features so you can plan ahead.
- Get your feedback and requests.

Platform Goals

- Enable better security in the Palm OS® platform.
- Give developers and licensees the necessary infrastructure to build custom security solutions.
- Give consumers and enterprises a trusted palm OS® platform they can rely on.

Problems to Solve

- Unprotected stored data.
- Unprotected communication channels.
- Identifying users and code.
- Attack by malicious/rogue software.
- Lost device.

Current Features

- System Auto Lockout Password protection.
- Debugger password protection.
- Closing shortcuts (Debugger, Serial port).
- Record hiding/masking.

Palm OS® 5 Features

- New cryptographic APIs in the platform.
  - APIs enable services for:
    - Encryption/Decryption using RC4.
    - Hashing using SHA-1.
    - Signature verification using RSA verify.
- Secure Socket Layer (SSL):
  - Supports SSL v3.
  - SSL APIs.

Roadmap

- Cryptographic Framework.
  - Crypto APIs enables more services.
  - Extensible architecture to support multiple cryptographic algorithms.
  - Extensible architecture supports SW or HW based crypto.
  - Supports multiple key lengths.
  - Databases are enabled for encryption.

Roadmap *Cont.*

- Authentication Framework
  - Enables user and code authentication schemes in the platform.
  - Extensible architecture to support multiple authentication mechanisms.
  - Authentication APIs.

Roadmap *Cont.*

- Access Control.
  - Access to resources in the platform can be authorized by Palm OS® security services.
  - Secure Databases are enabled for access control.
  - Authorization APIs.

Roadmap *Cont.*

- Signed Code.
  - Enables the digital signing and verification of PRCs.
  - Signed code APIs.

Roadmap *Cont.*

- Certificate Management.
  - Supports certificate parsing and verification.
  - Support for X.509v3 certificates.
  - Certificate APIs.

Roadmap *Cont.*

- Communication Security.
  - SSL/TLS APIs.
  - New communications framework that enables third parties to add their own VPN stacks.

Roadmap *Cont.*

- Core OS Protection
  - Memory protection (MMU support).
  - Multiple processes.
  - Secure storage areas.

Roadmap *Cont.*

- Others:
  - Synchronization of secure databases.
  - Desktop authentication scheme.

Feedback and Q & A

- Again, we need your feedback.

- Feedback E-mail address:
