Enabling the Real-time Enterprise

André Sant'Anna, CTO & CPO, Pumatech, Inc.

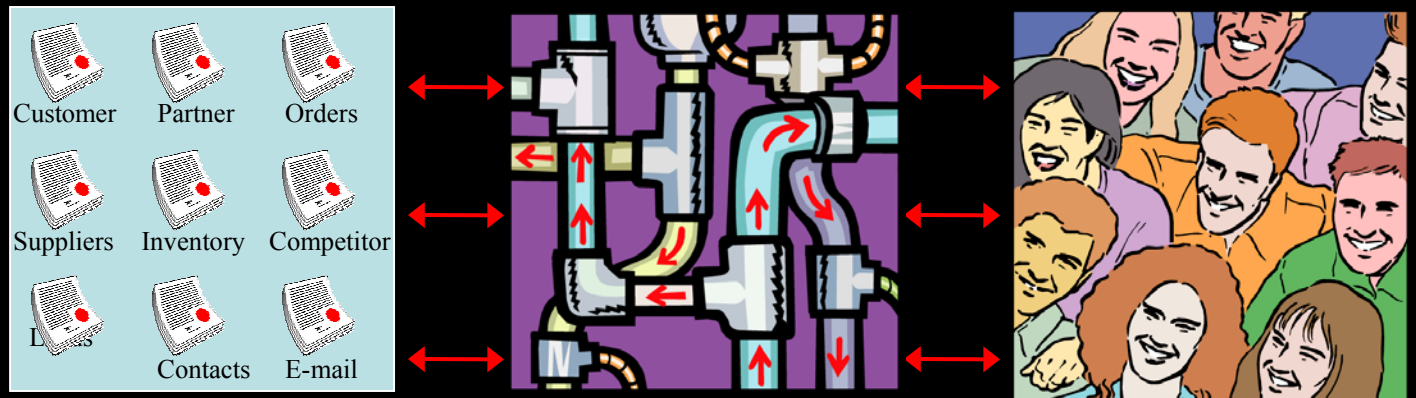

Agenda

- The Real-time Enterprise
- Going Mobile
- Enablers
- The Business Case
- The Pumatech Contribution
- A Developer's View

The Real-time Enterprise

"Information that's fresh has the most value."

Ross Altman, research director, Gartner Group

Information

- Multiple sources
- Up-to-date
- Accurate
- Accessible
- Available 7x24

Infrastructure

- Legacy systems
- Business processes
- Business rules
- Security policies
- Management

Employees

- Wherever
- Whenever
- Equipped
- Empowered

Going Mobile

Core Business Applications

- SFA
- Field service
- Transportation
- Logistics
- Manufacturing
- Supply chain
- HR
- Productivity

Knowledgeable Interactions

- Customers
- Partners
- Suppliers
- Wherever
- Whenever

The Real-time Enterprise Means Knowledgeable Interactions at the Point of Business

Enablers

- High-bandwidth networks
- High-performance hardware
- New, more capable devices
- Open standards
- Next generation software for:
  - Monitoring multiple sources of data
  - Keeping information current in all locations
  - Optimizing online & offline usage
  - Managing the complexity

The Business Case: Good Targets

Complexity

- Business processes, paperwork, rules & regulations

Unpredictability

- Logistics, field service

Time is critical

- Supply chain, field service, transportation

Responsiveness required

- Sales force, healthcare, customers

Information gathered at point of business

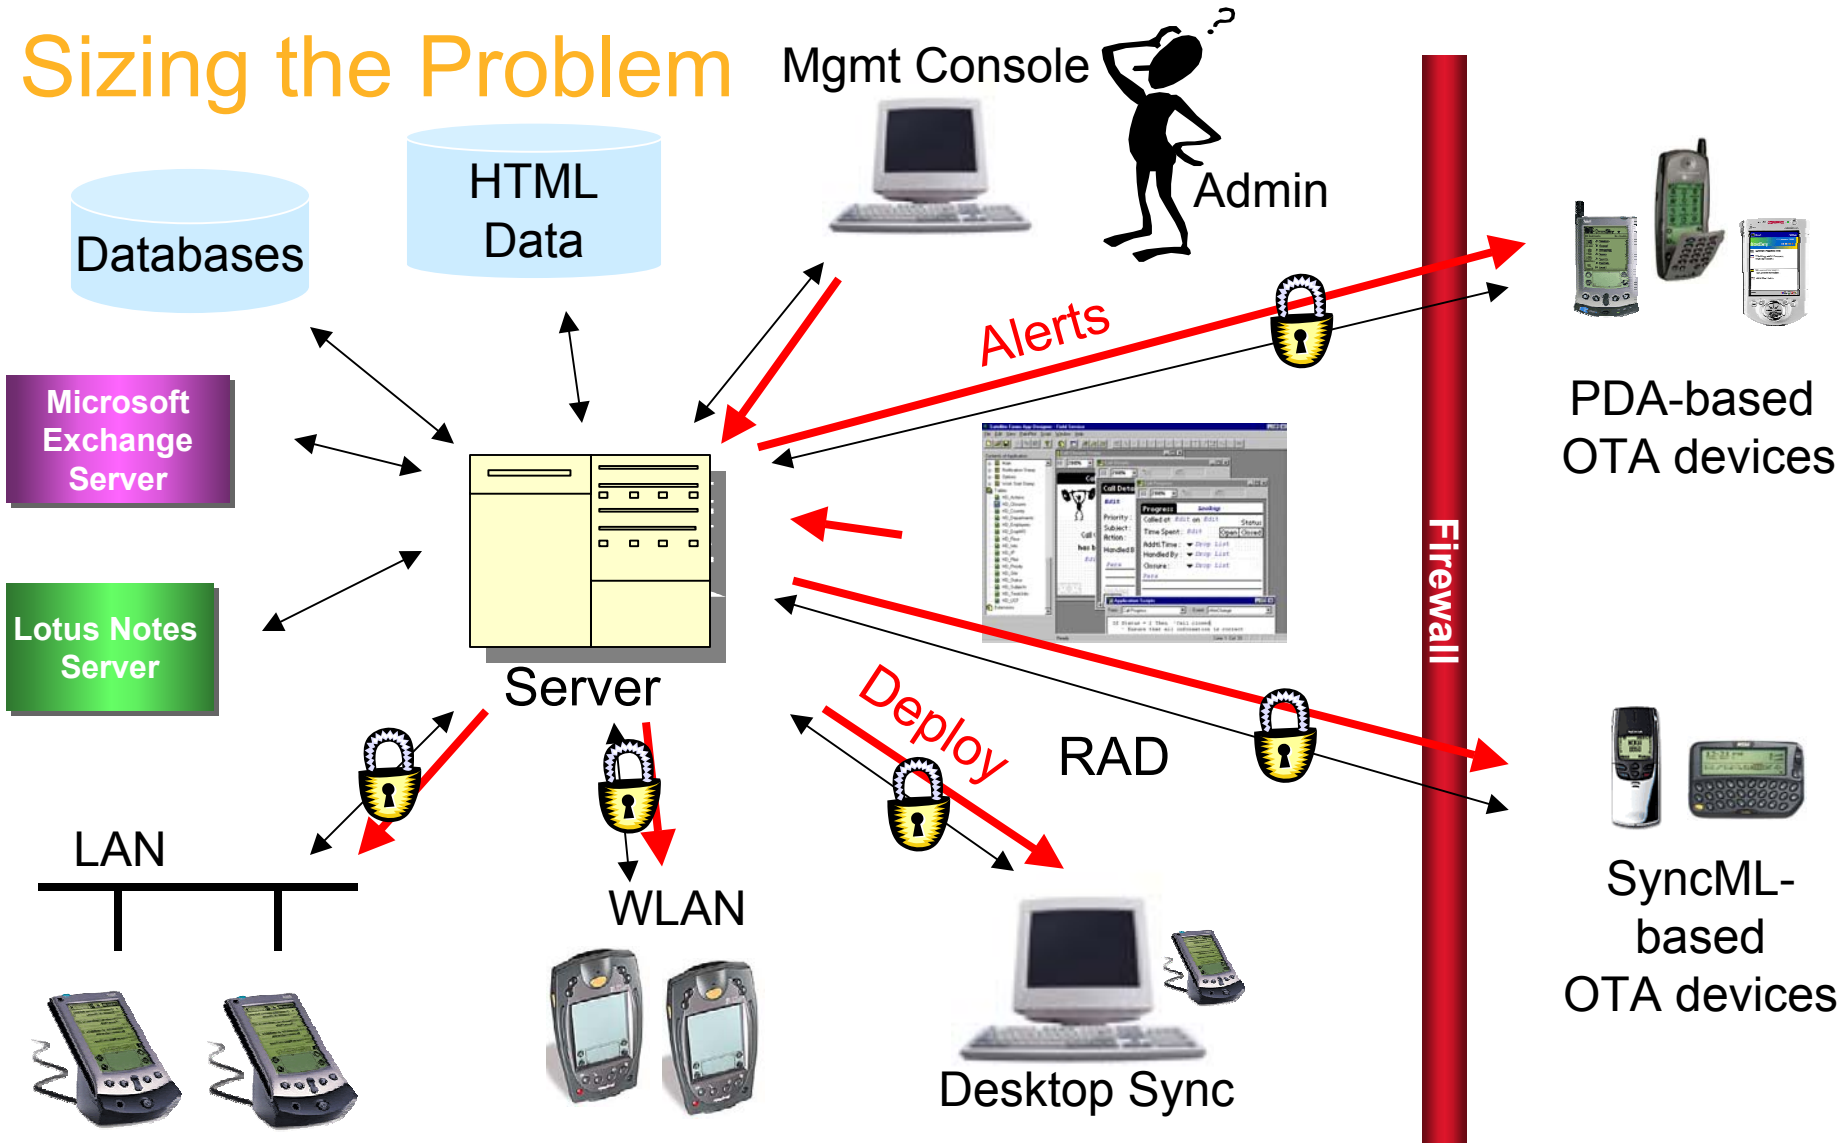

- Building inspections, car rental

Need to react

- Operational plan changes, inventory level changes

Sizing the Problem

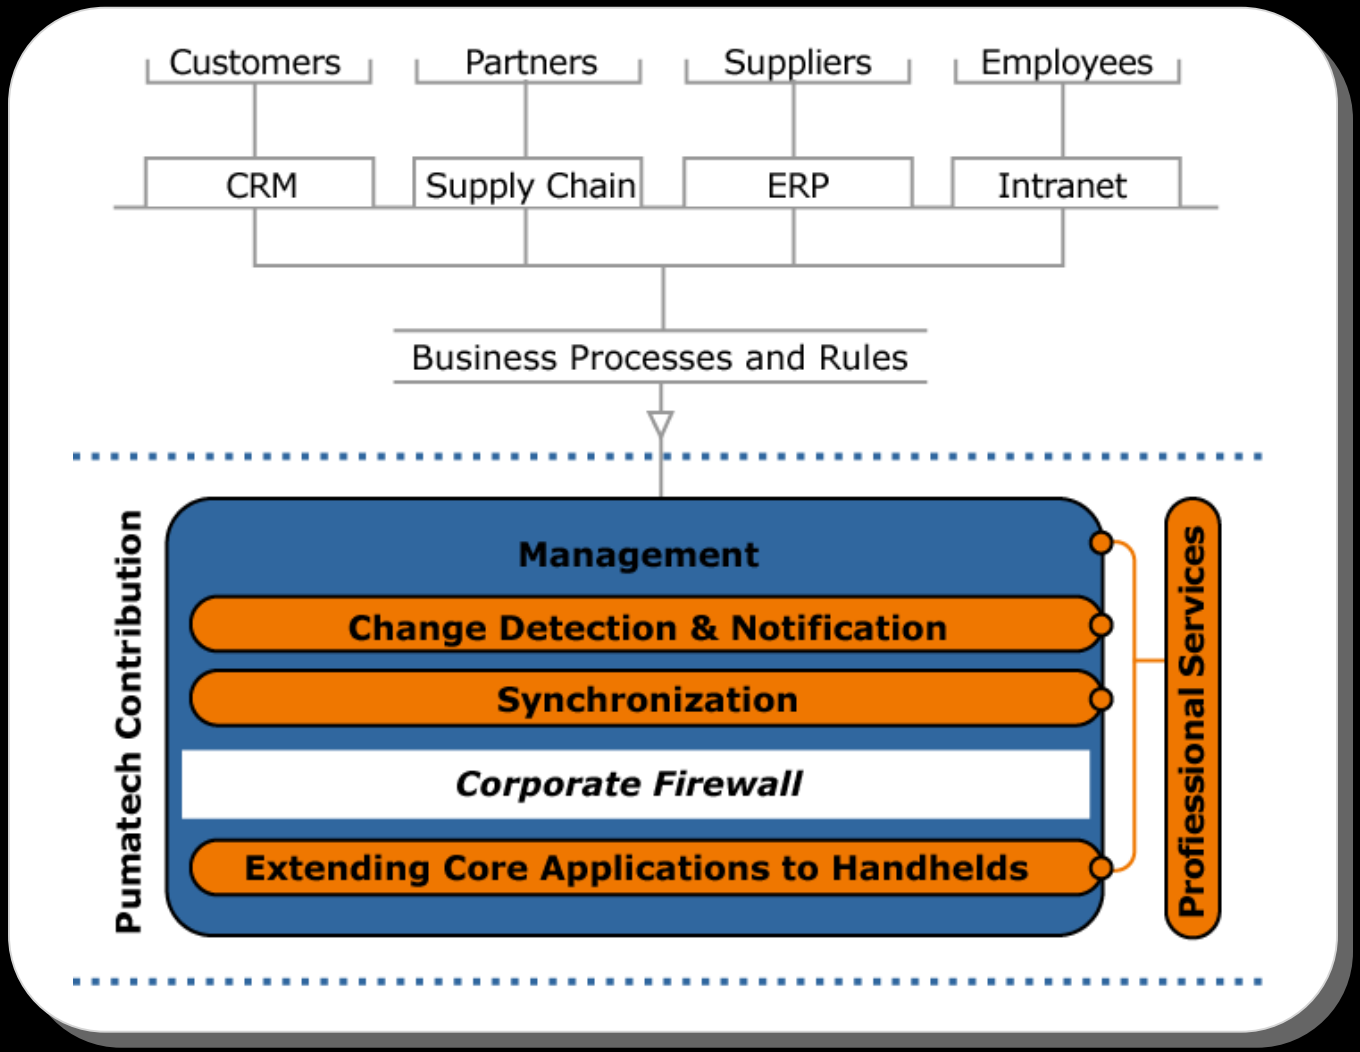

How Can Pumatech Help?

- Desktop sync solutions for PIM & custom data
- Server sync solutions for PIM & custom data
- Device Rapid Application Development tools
- Device deployment and management
- HTML-based information monitoring & alerting
- Professional Services
  - Custom integration
  - Training

The Pumatech Contribution

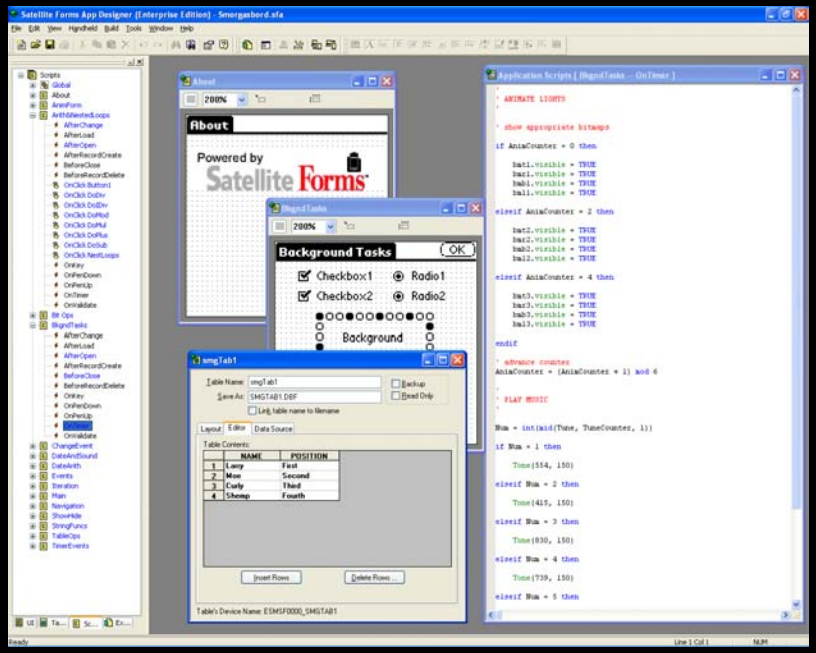

A Developer's View

- Creating custom applications
- Synchronizing data
- Deploying applications
- Upgrading deployed applications
- Sync server extensibility
- Monitoring Web data

Creating Custom Applications

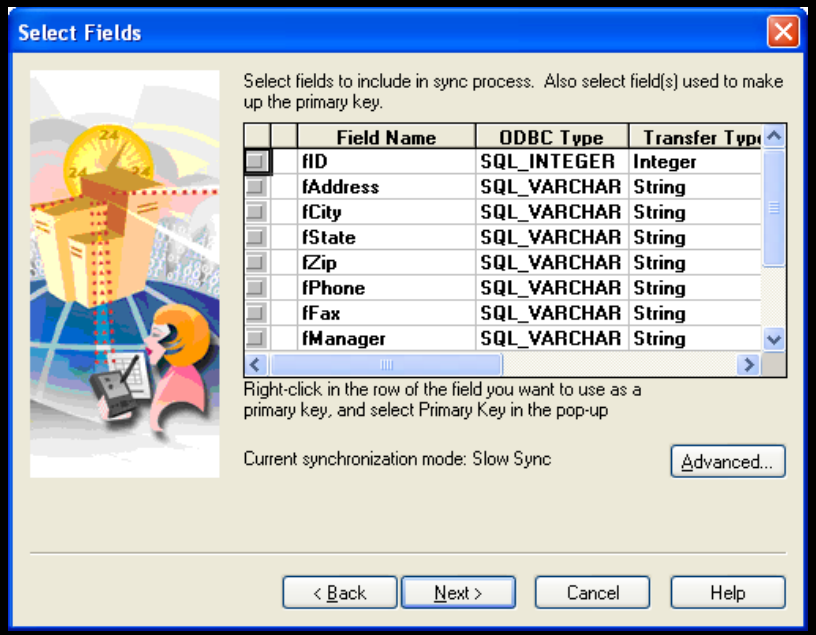

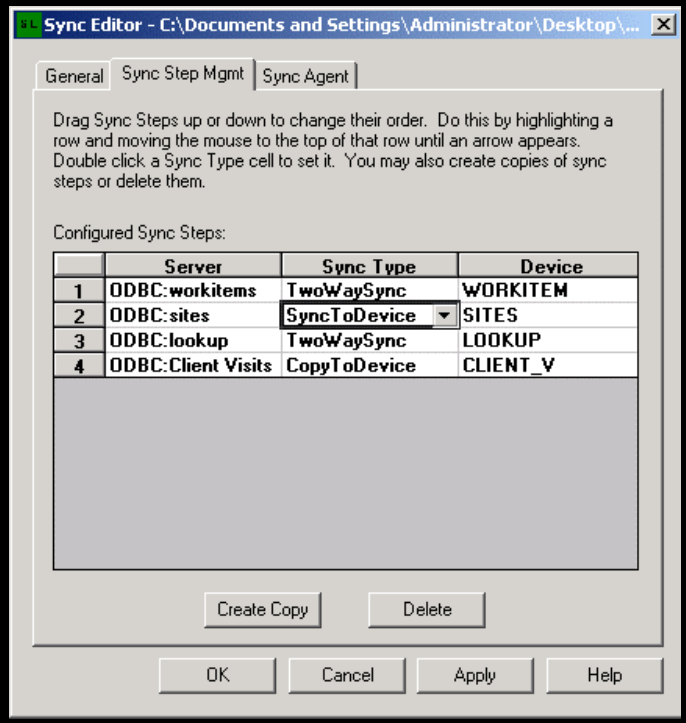

Rapidly prototype & develop your application with Satellite Forms

- Drag & drop form designer
- Data table support
- Event-driven scripts
- Support for various add-ons
- Extensible with “C”

Synchronizing Data

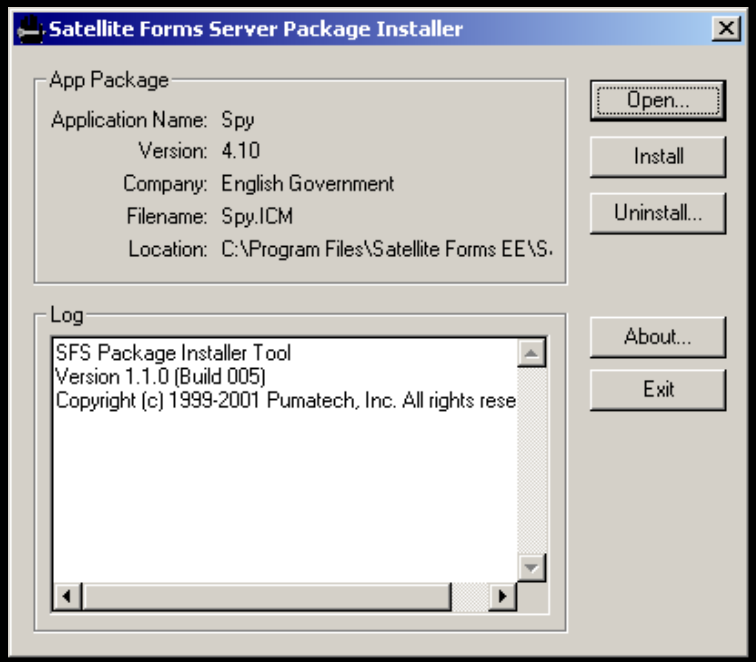

Simply link your device tables to server data sources…

- Databases
- Microsoft Exchange, Lotus Notes
- Enterprise applications

…and configure the type(s) of sync desired

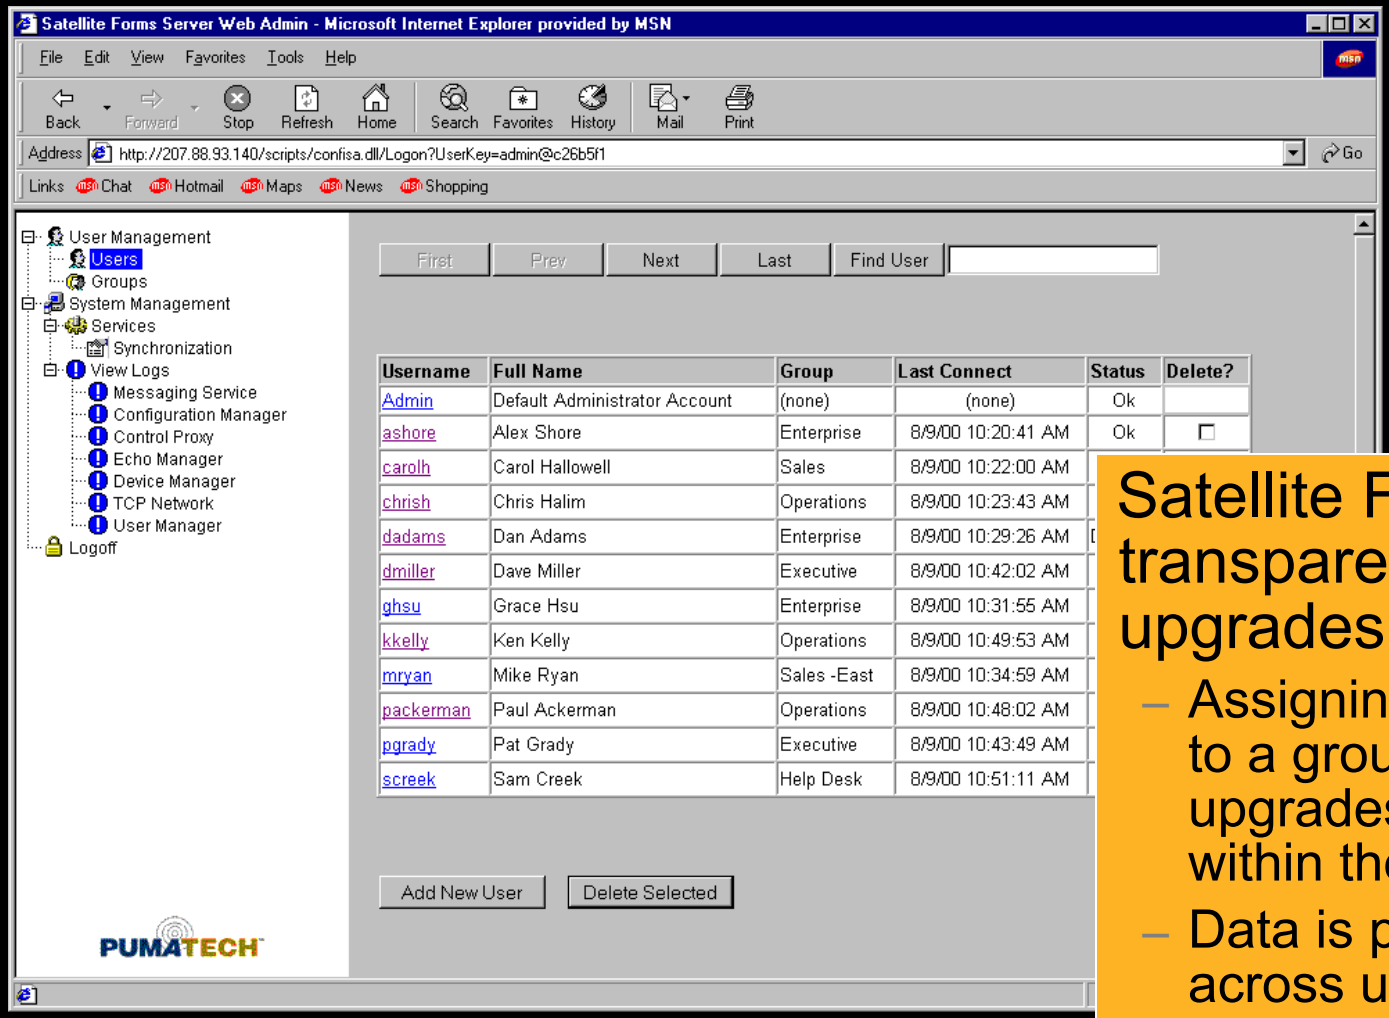

Deploying Applications

Deploy your application with Satellite Forms Server

- Simply install “app packages” produced by SF
- Assign app package to a group of users
- App is installed at next sync

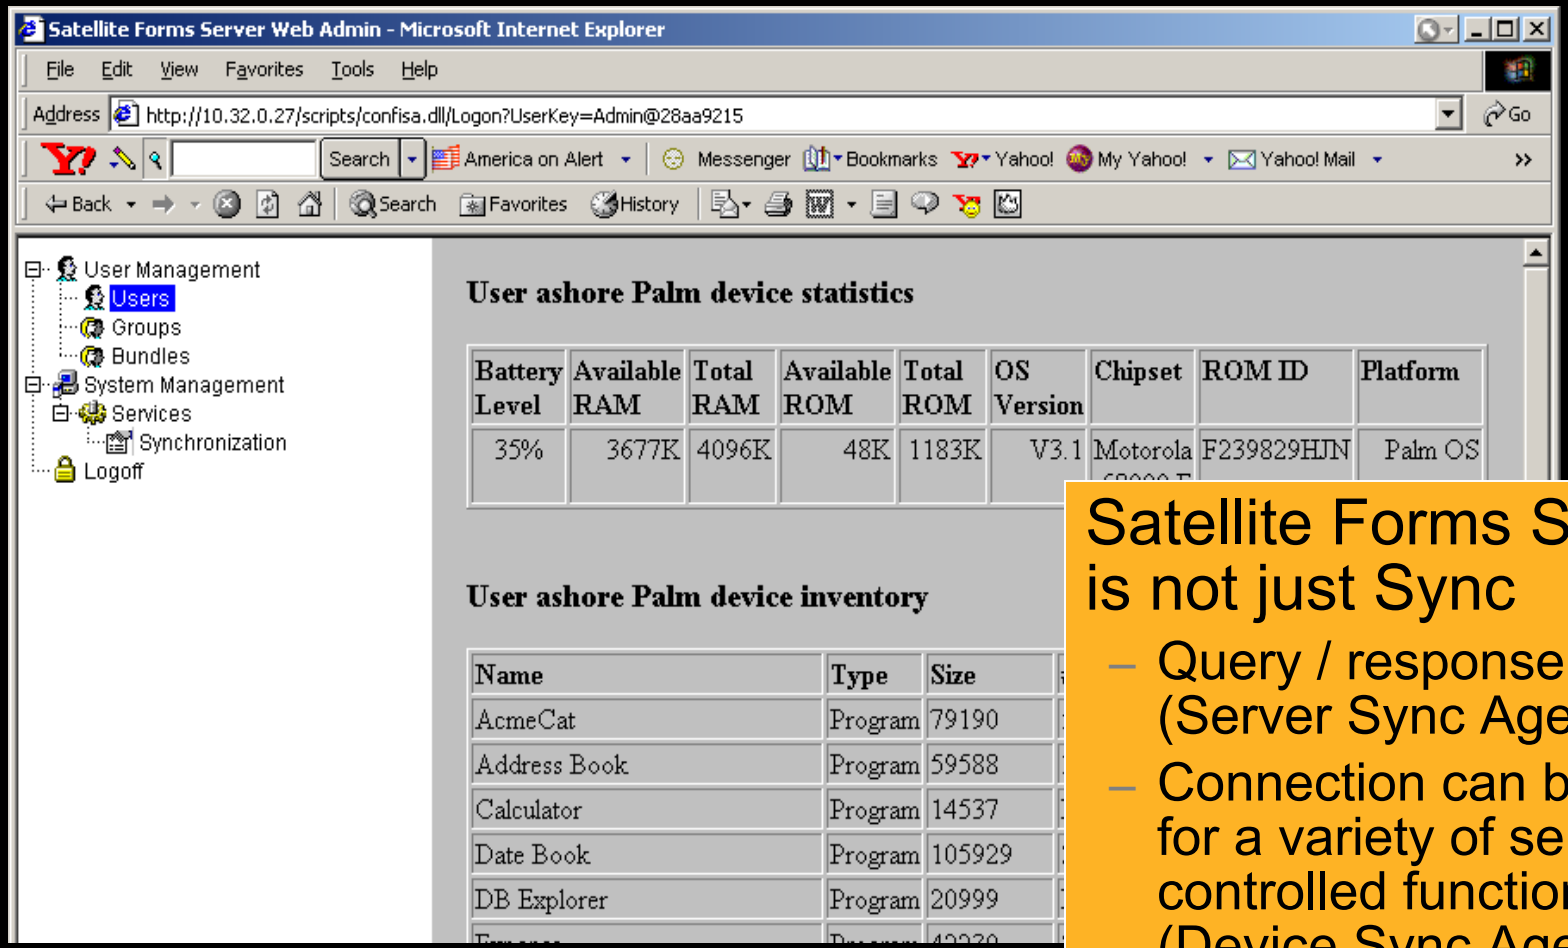

Upgrading Deployed Applications

Satellite Forms Server transparently upgrades applications

- Assigning a new version to a group automatically upgrades the users within the group
- Data is preserved across update

Server Extensibility

Satellite Forms Server is not just Sync

- Query / response (Server Sync Agents)
- Connection can be used for a variety of server-controlled functions (Device Sync Agents)
  - Inventory, security, etc.

Monitoring Web Data

- Many sources of data are accessible only through Web pages (Web, intranet, etc.)
- Information is often dynamic and geared for viewing by people, not computers
- Data must be monitored and notification of changes must go to a variety of devices and in a variety of formats

Change Detection & Notification

Mind-it:
Four Key Components

Responder

Web UI for end users and IT

Detector

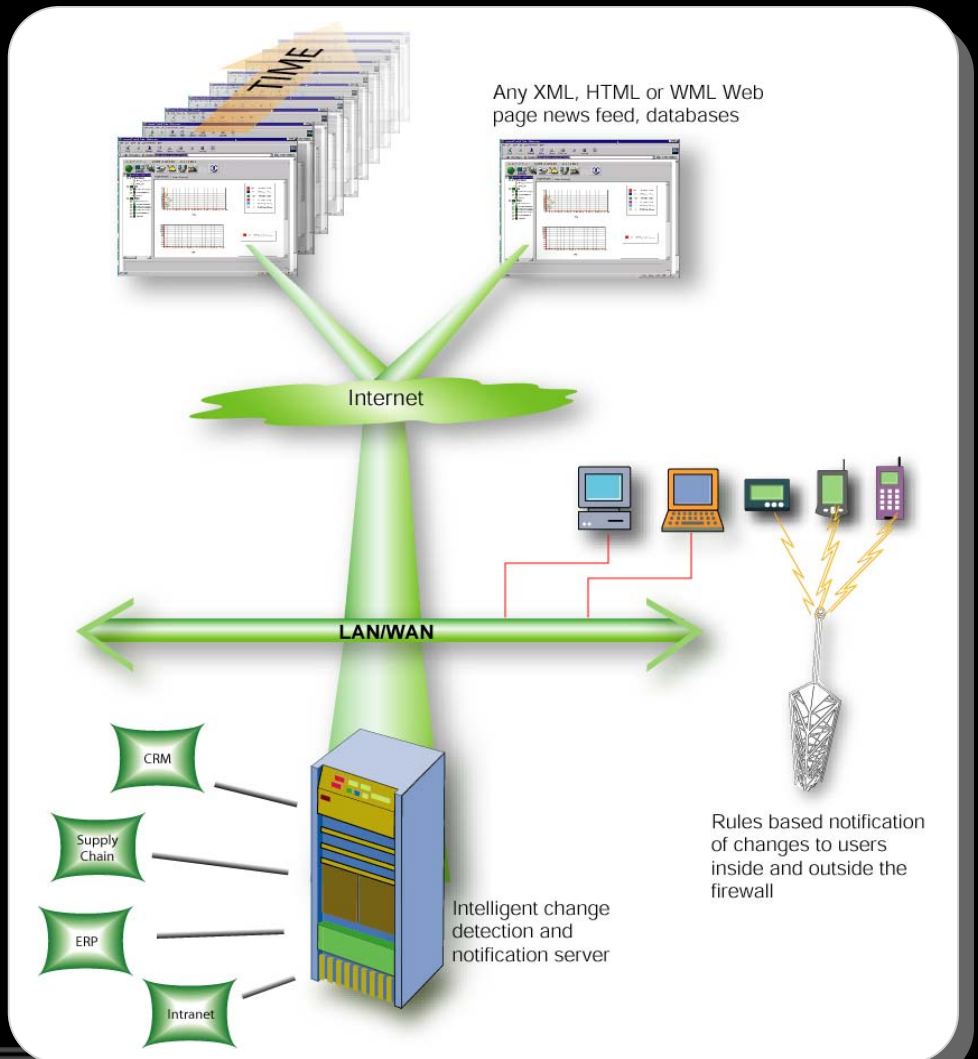

Detect granular changes on Web, database or network data

Notifier

Alert end-users of changes via e-mail, SMS, pager, voice and instant messaging

Storer

User info repository

Using Mind-it

- Mind-it “out-of-the-box”
  - Generic monitoring of Web pages
  - Notification through SMTP, SMS, WAP
- Mind-it is very customizable
  - Supports polling of changes
  - Supports event-based change detection
  - Supports complex log-in procedures through SmartFetch
  - Notifications can be customized through templates
  - Server can be integrated as part of a larger solution through HTTP APIs

Critical Success Factors

Remember, Keep it Simple!

- Clearly defined business problem
- Understand the context of use
- Usability is key
- Application / device fit
