PalmSource Seminar Series

Build Tomorrow ▸▸▸ Today

New Technologies, New Opportunities.

Presented By:
David Fedor,
Director,
Developer
Architecture
and Disclosure

palm™

POWERED

What's new?

Hardware: 68k, ARM

Screens: sizes, AIA, Double density, 1.5x density

Bluetooth, 802.11, GSM, GPRS…

Market focuses: wireless voice or data, gaming, location-based, ultra-mobile, education…

New formfactors: bigger, smaller, "different"…

Much more memory, inexpensive VFS…

Localizations: languages, encodings…

Input methods: keys, microphones, Graffiti® 2…

The Diversity of Palm OS® devices

Symbol SPT 1550

Diversity

Diversity can be a strength.

Diversity can be a distraction.

What's your strategy?

a) Limit your app to running on a few devices
b) Standard functionality on every device
c) Run everywhere, plus some optimization
d) 100% perfection, everywhere

Diversity in real life

Primary areas where diversity impacts you:

- Screens: color depth, density, size
  - (bitmaps normally should be present for 1 bit, 8 bit, and 8x2, but some applications deserve higher or lower expectations.)
- Memory availability, VFS cards
- Communications: Beaming, Bluetooth, IP connectivity…
- Processors: Various 68k processors, ARM, PACE
  - (usually only a problem if you're circumventing the APIs)
- Buttons and keys

Diversity in real life (cont.)

Less coding-oriented diversity areas:

- Performance
- Testing, support, documentation, packaging…
- Device-specific features, and varying customer profiles

Suggestions for success

Handle the base case

- Require a reasonably current Palm OS version, etc.
- Add restrictions if necessary
  - Memory requirements are obvious
  - Device-specific features and/or hardware?

Think long-term

- Is incompatibility worth it? Opportunity cost…

Optimize for your target customers

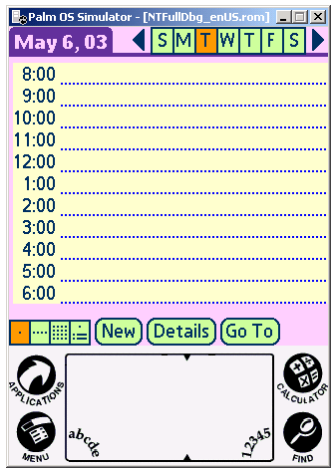

- Early adopters? First mover advantage? Online/offline?
- Low cost devices? High end?
- Licensee tie-in? Controlled market?

Testing diversity

- **Testing on actual devices**
- **Testing on emulators and simulators**
- **Testing on various networks**

Today's opportunity

Licensees want you to optimize for their devices

- Their talks should give you guidelines
- Visit them for specifics, tools, samples…
- Try their devices in the lab
  - (Small effort here might have a big payoff)
- Work together with them on optimization and market direction
