POWERED

The Future

And what we're doing about it

Agenda

What do customers want?

Who wins?

What we're doing

Our market: Mobile Data

It's not just calendar and address book

Putting people in charge of their information, communication, and entertainment

"It's the indispensible device you carry with you all the time that helps you live your life."

"Your world, wherever you are."

What we know about the market

Random sample of >9,000 adults in US, UK, France, Germany

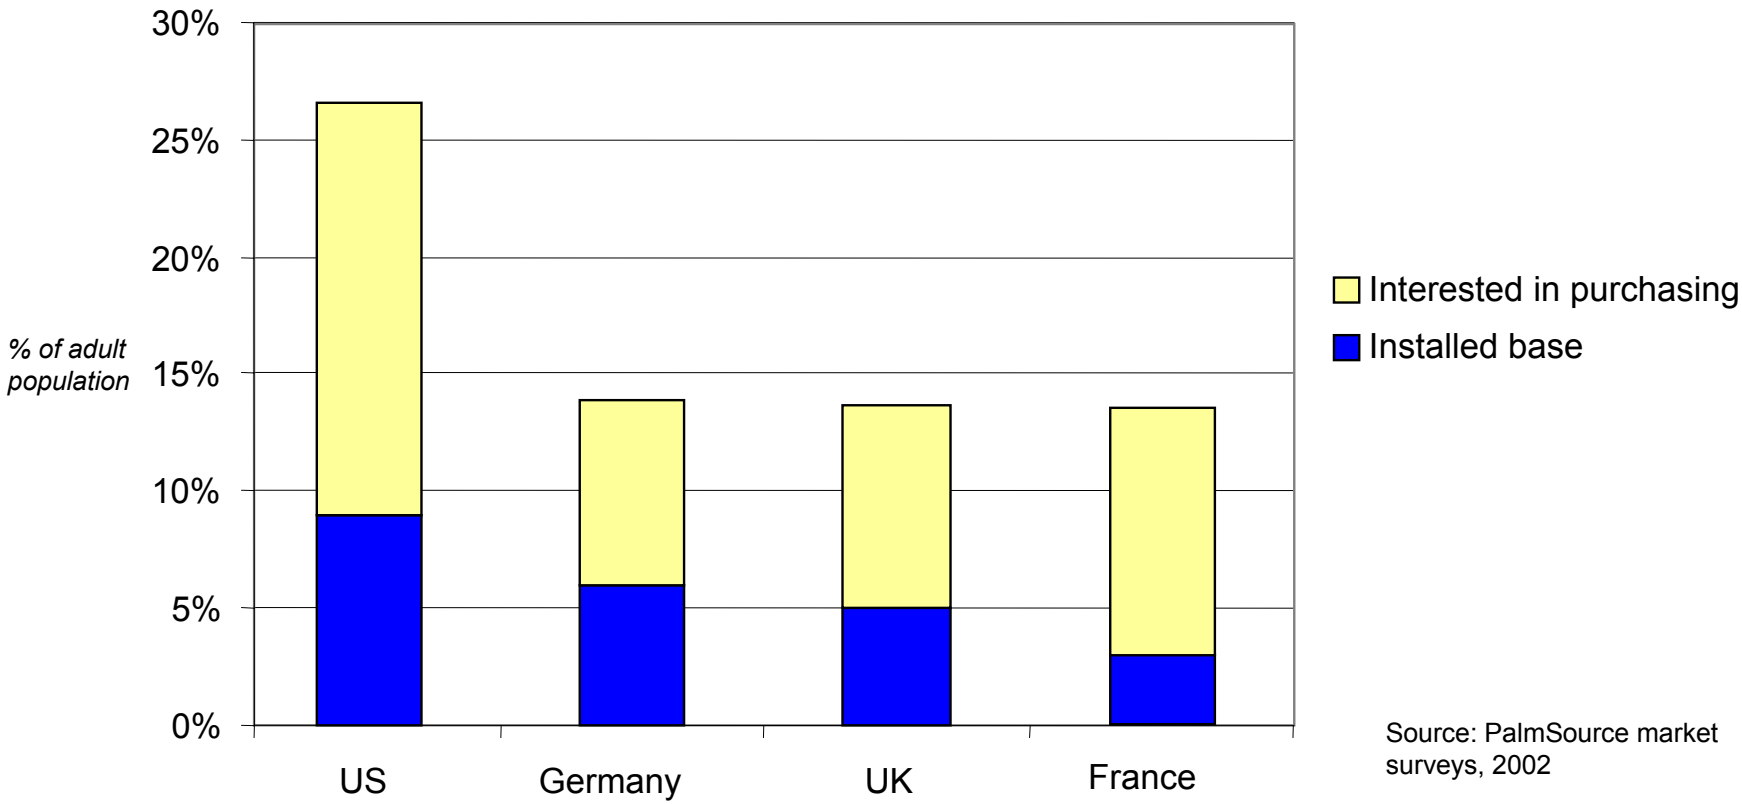

- Large samples, projectable to population as a whole
- Also research in Japan and China

Asked about:

- Current use of handhelds and smartphones
- Intent to purchase
- What they'd like in the future

Studies conducted in 2002

Handheld/smartphone ownership and interest around the world

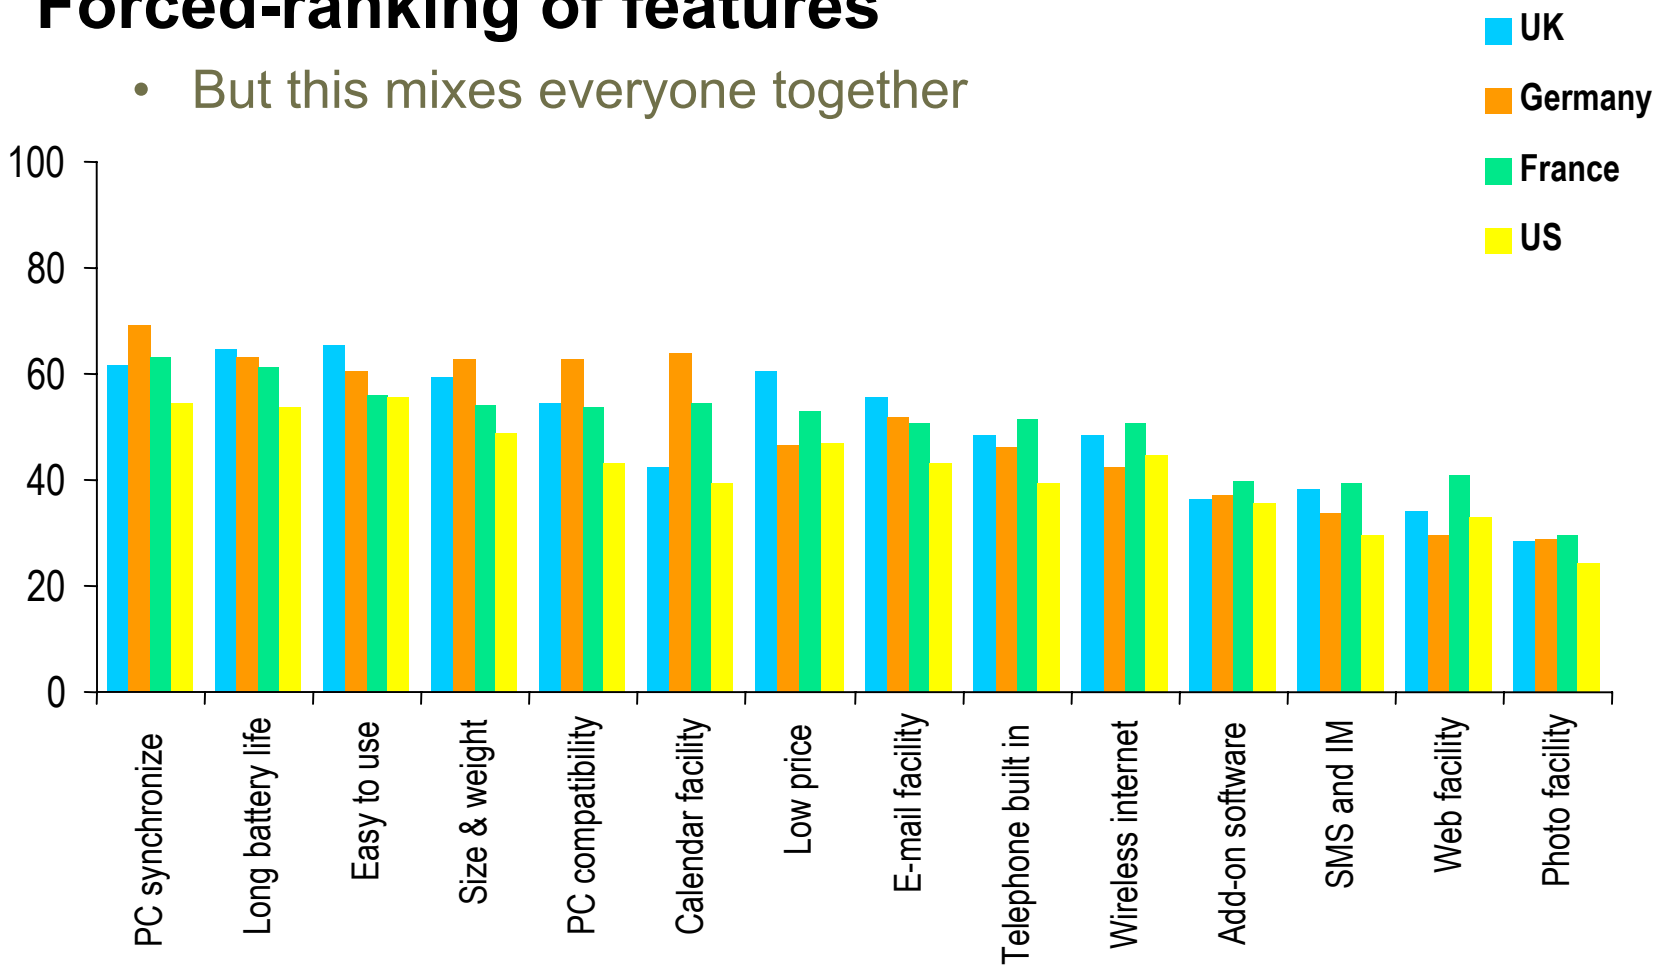

Source: PalmSource market surveys, 2002

Detailed needs of intenders

Forced-ranking of features

- But this mixes everyone together

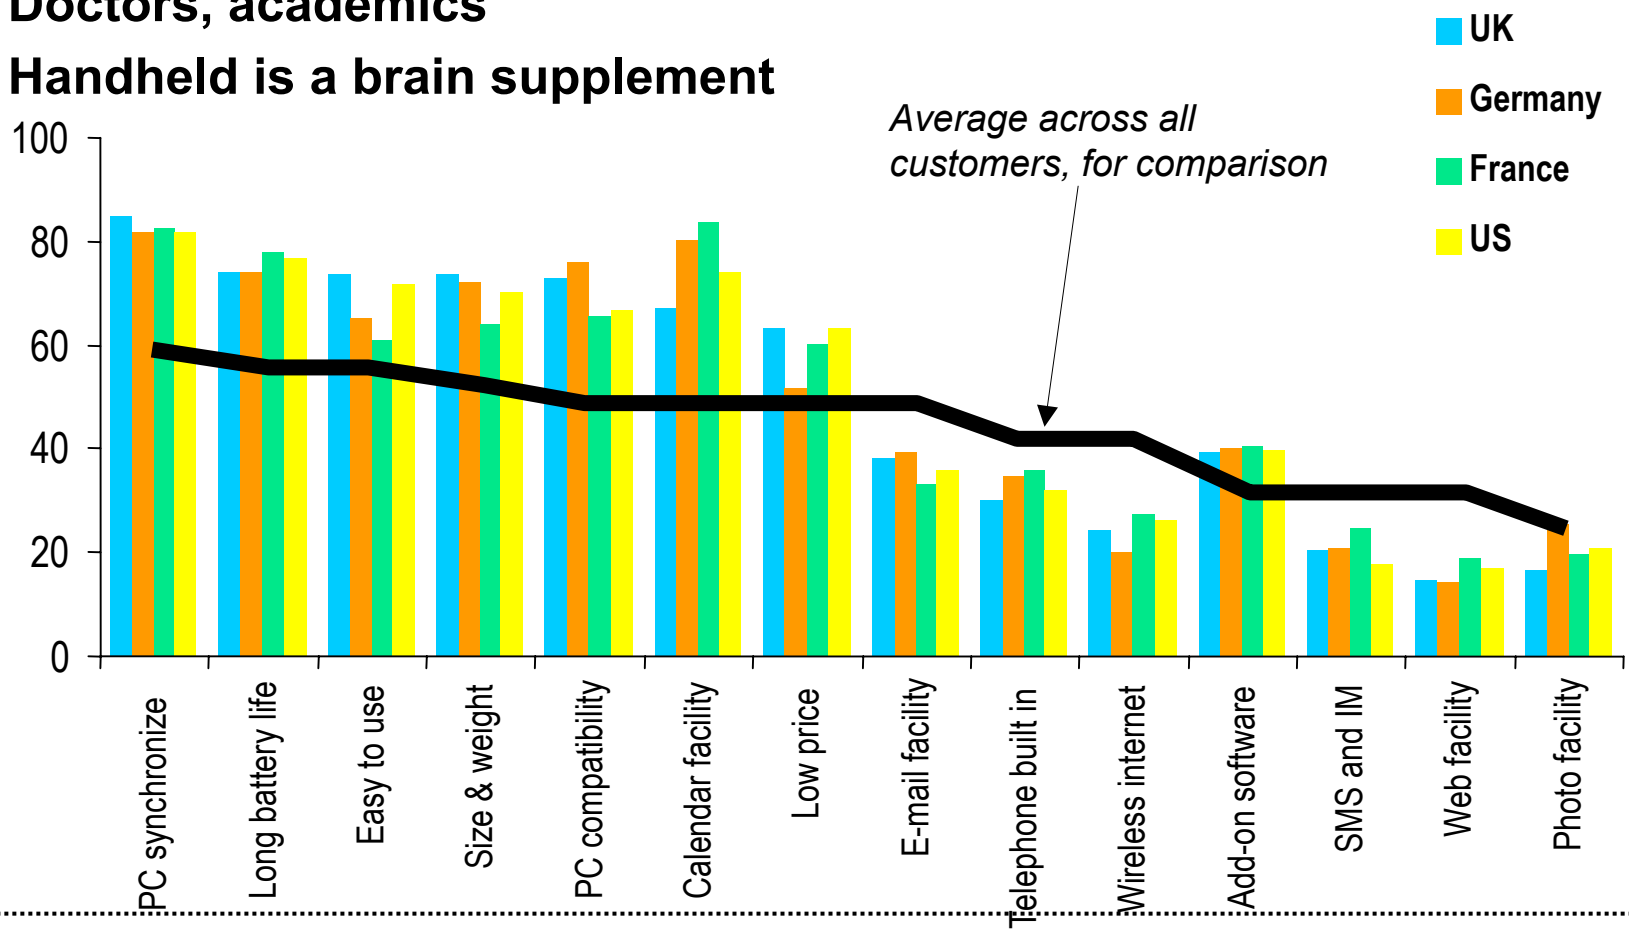

Information management users

Richer, older, more educated, more male

Doctors, academics

Handheld is a brain supplement

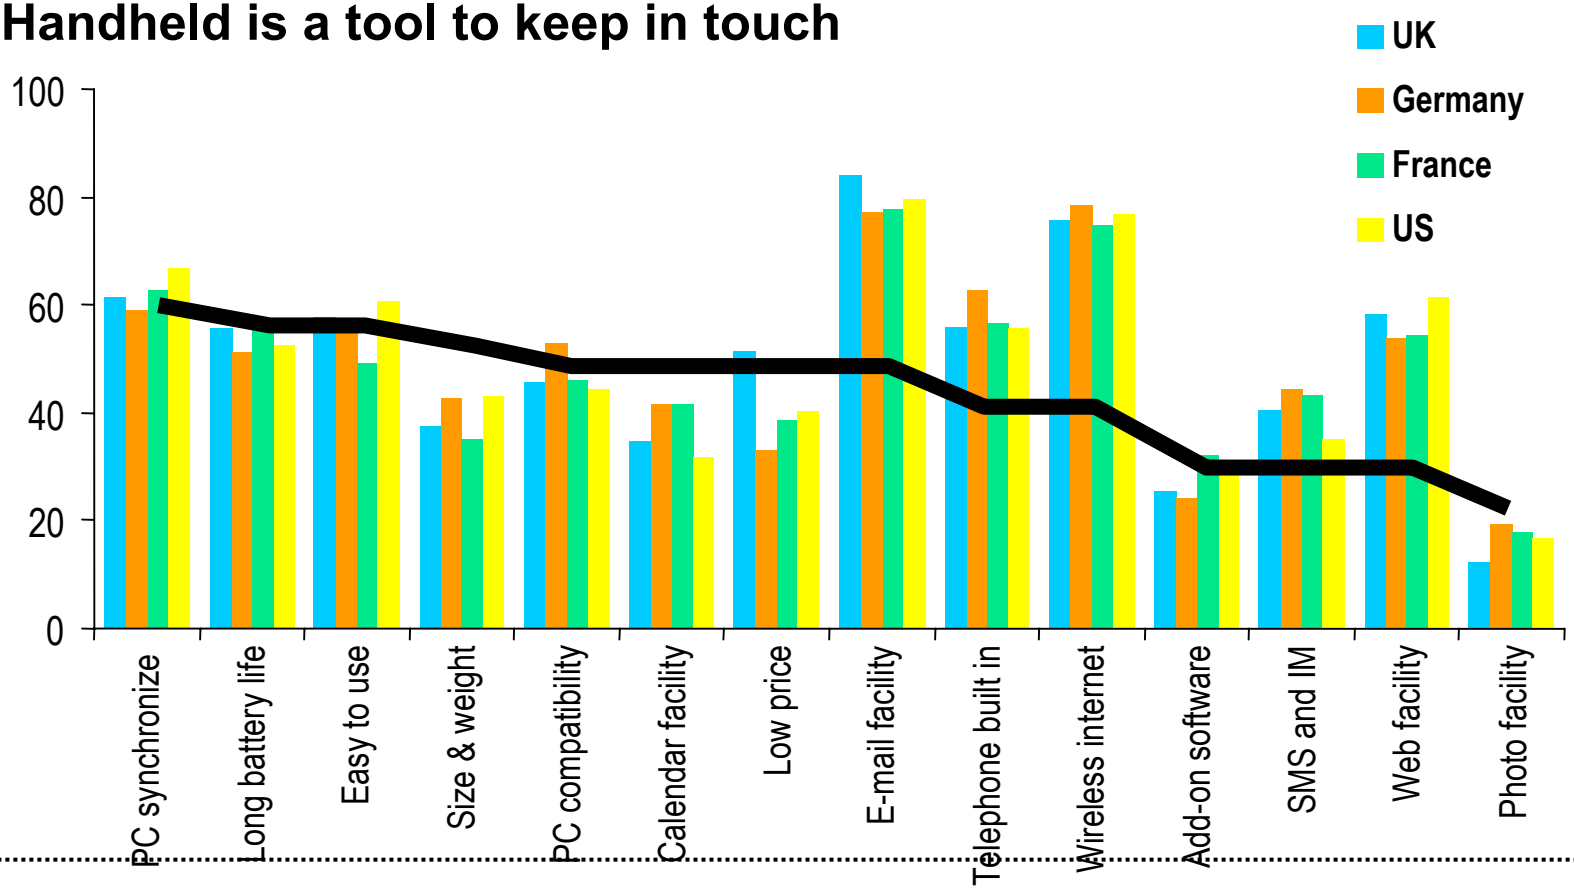

Communication users

Web + messaging + voice

Sales

Handheld is a tool to keep in touch

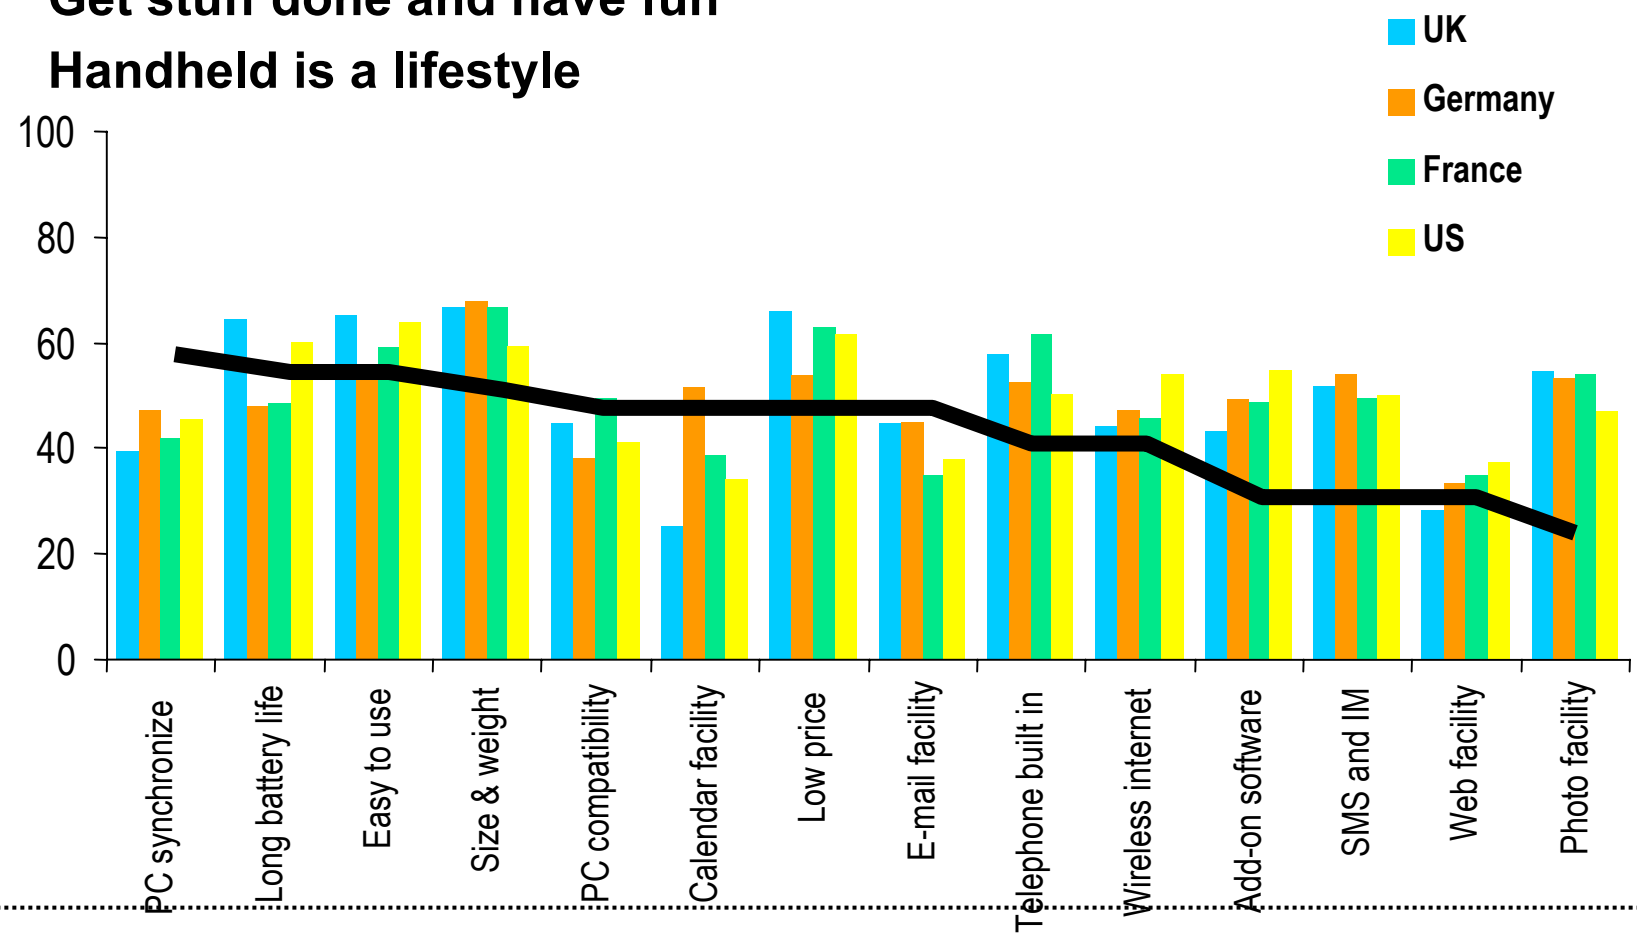

Full life users

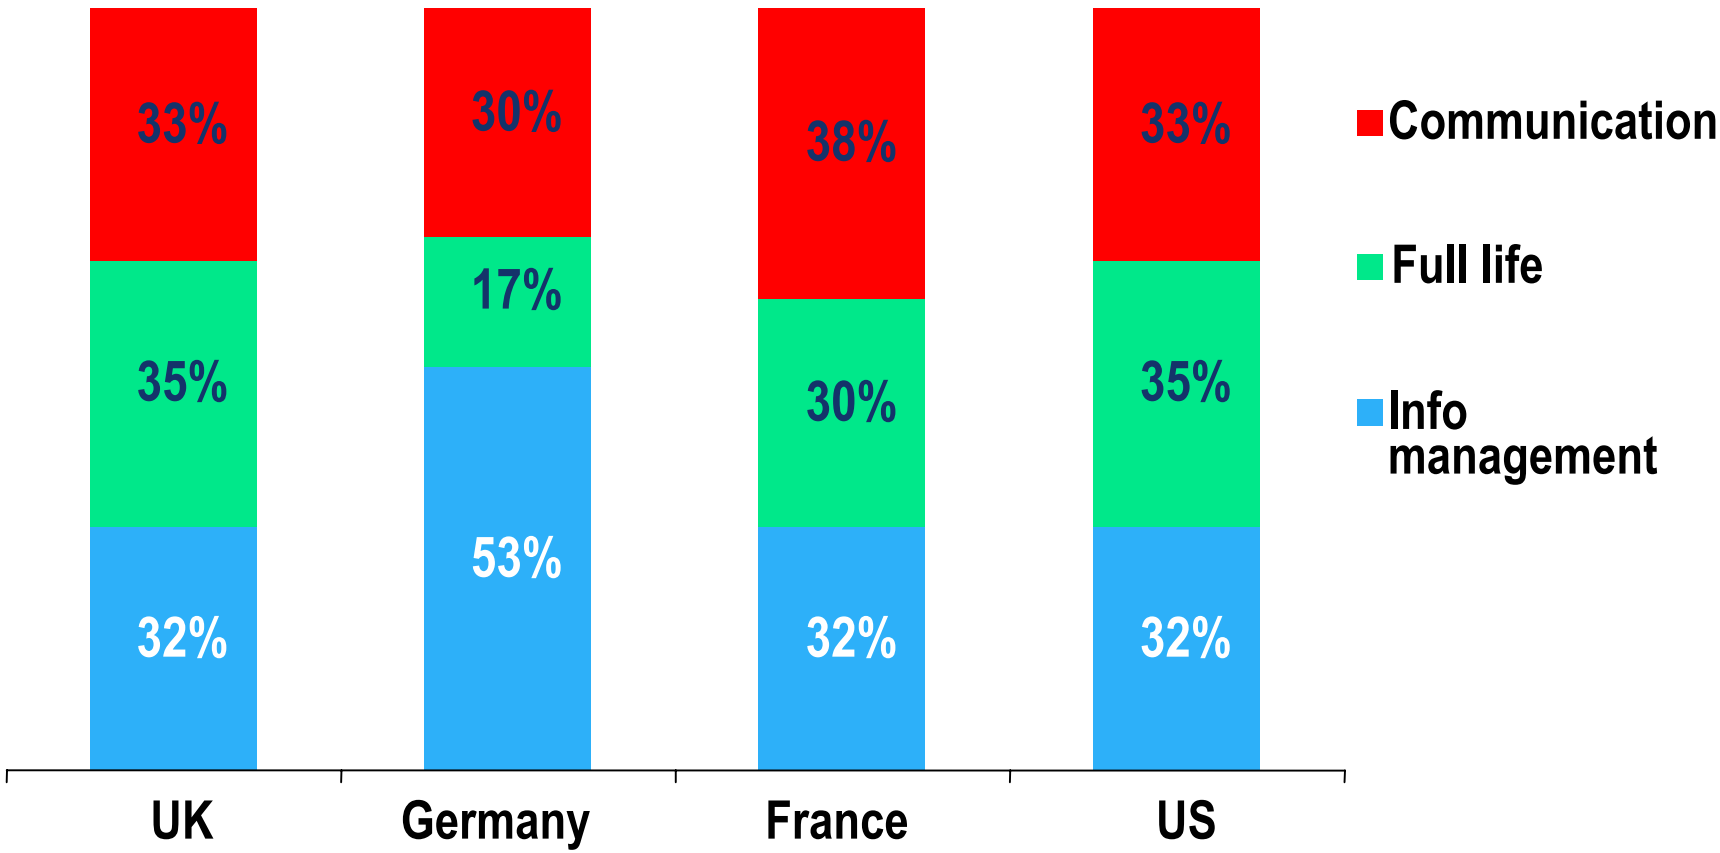

Youngest, most price sensitive

Get stuff done and have fun

Handheld is a lifestyle

Segment sizes

What about everyone else?

Today's handhelds and smartphones can grow to about 25% of the population

- Is that as far as it goes?

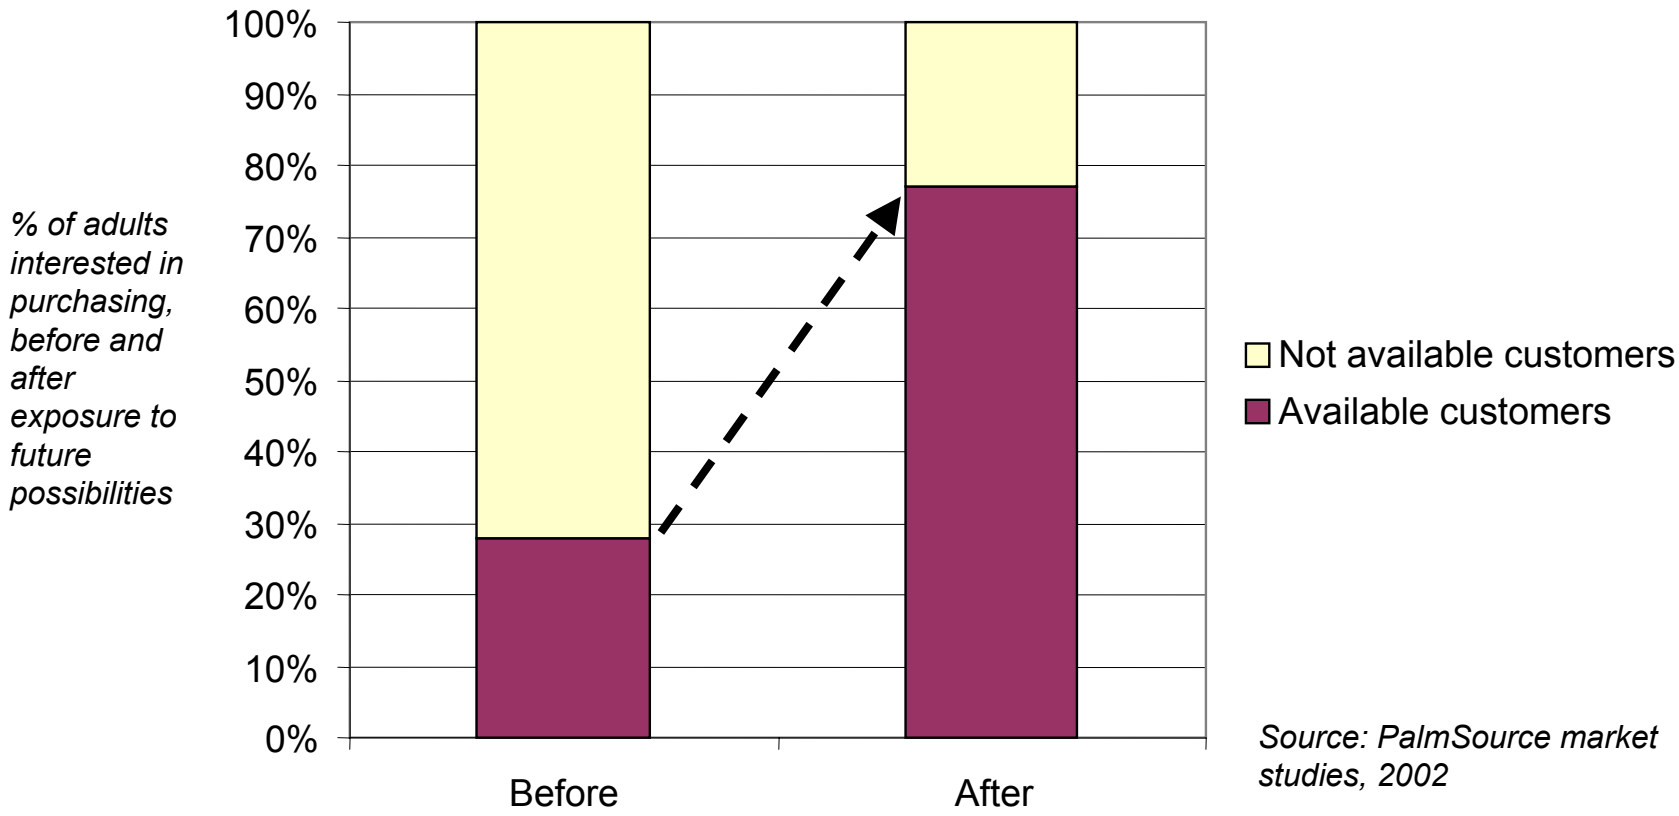

Second round of research

- Tested future product scenarios
- New technologies

Total available market for future device types

Before and after exposure to new solution concepts.

Market moves from a large niche to a horizontal bigger than PC market.

Source: PalmSource market studies, 2002

The six solutions we tested

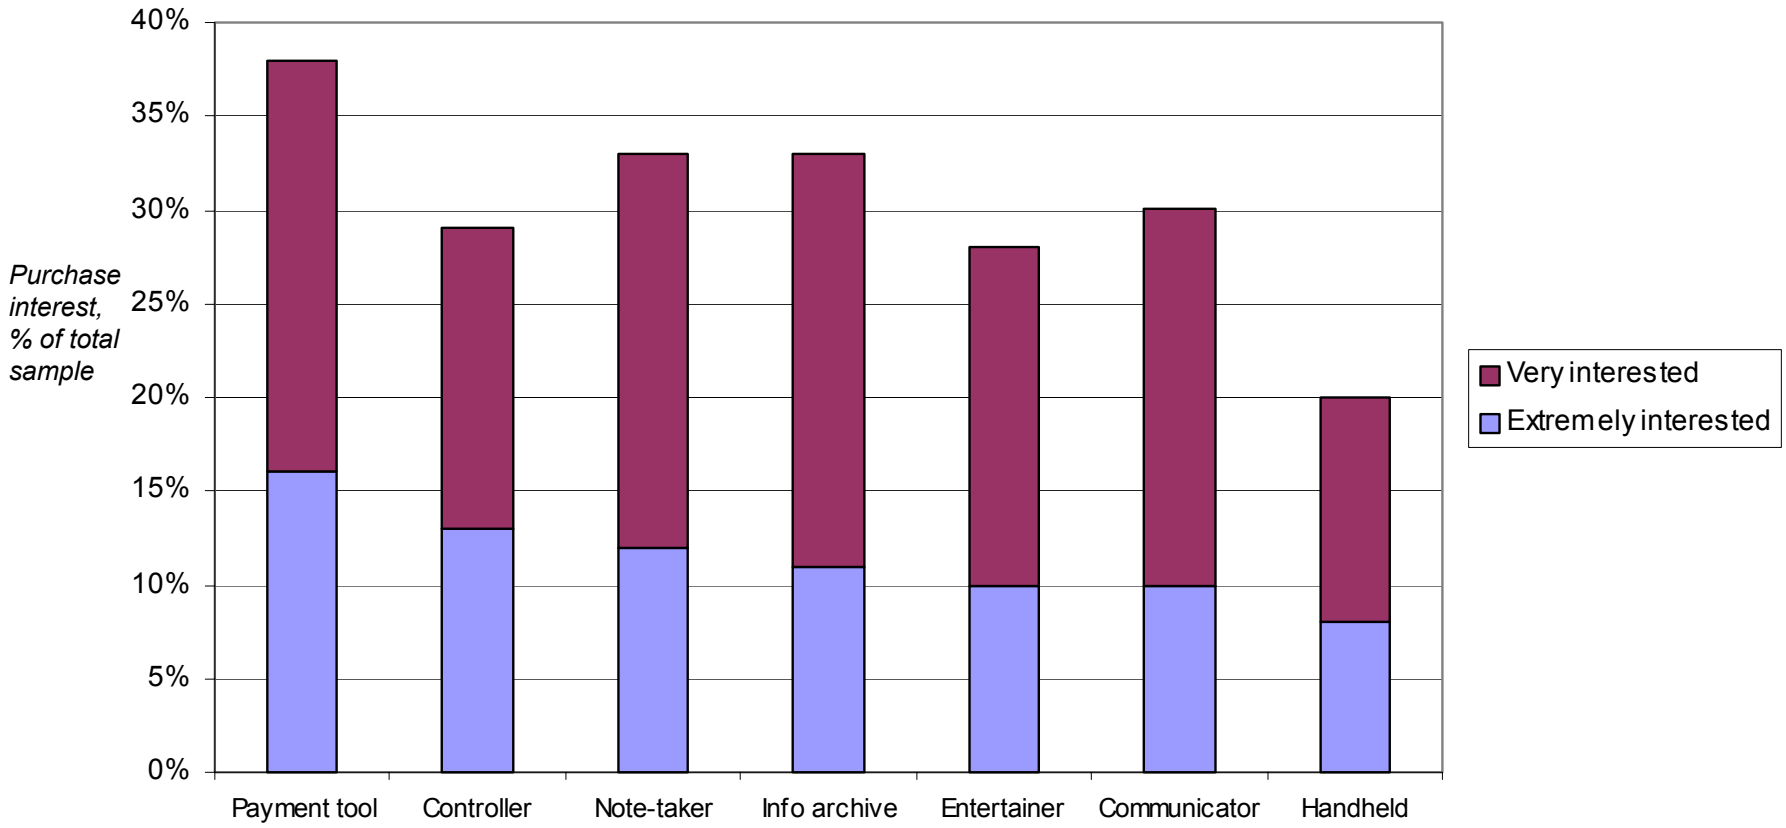

Payment tool – e-wallet, expense management, expense reports.

Controller – Easily program & control devices.

No single solution dominates

But each is more popular than basic PDA handhelds

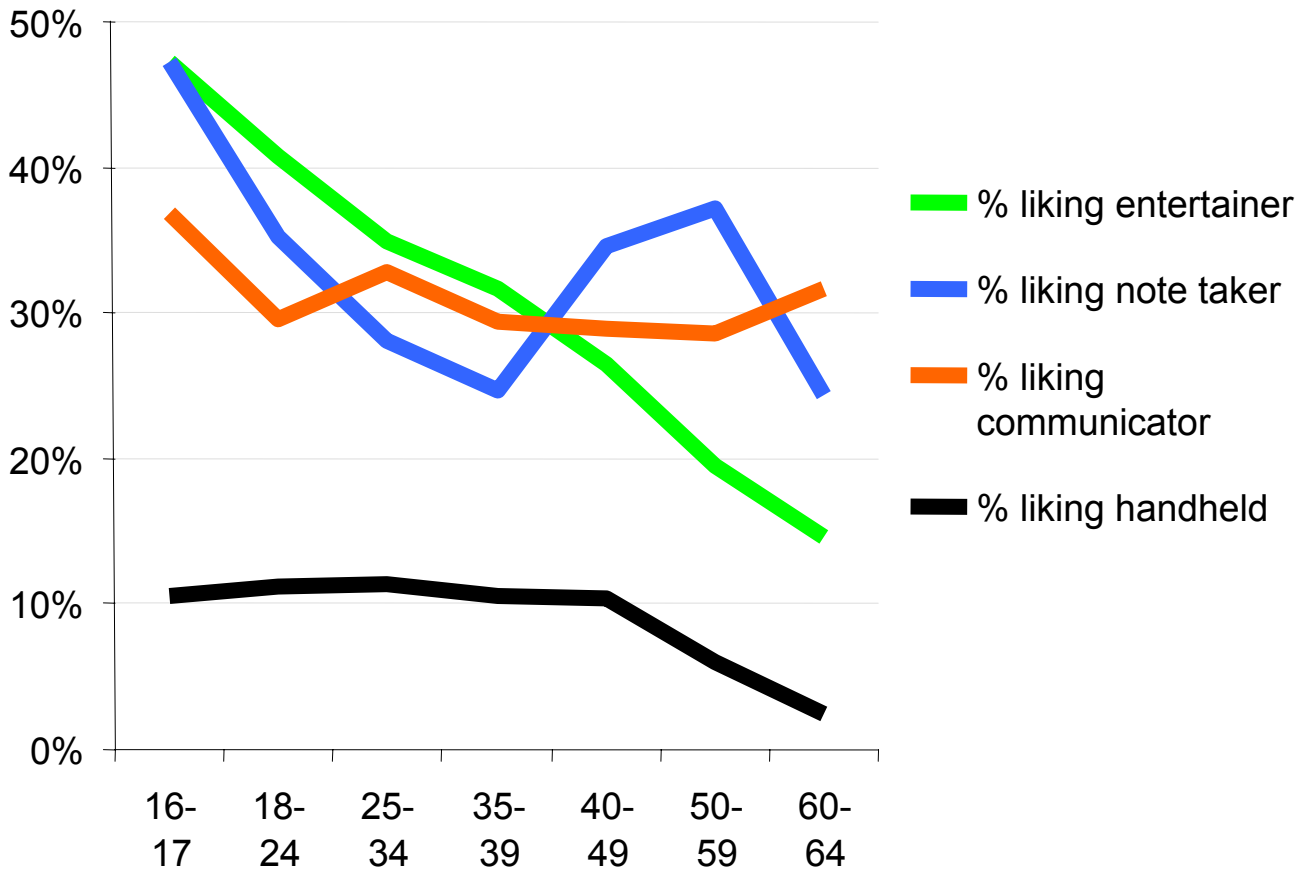

Solution ranking

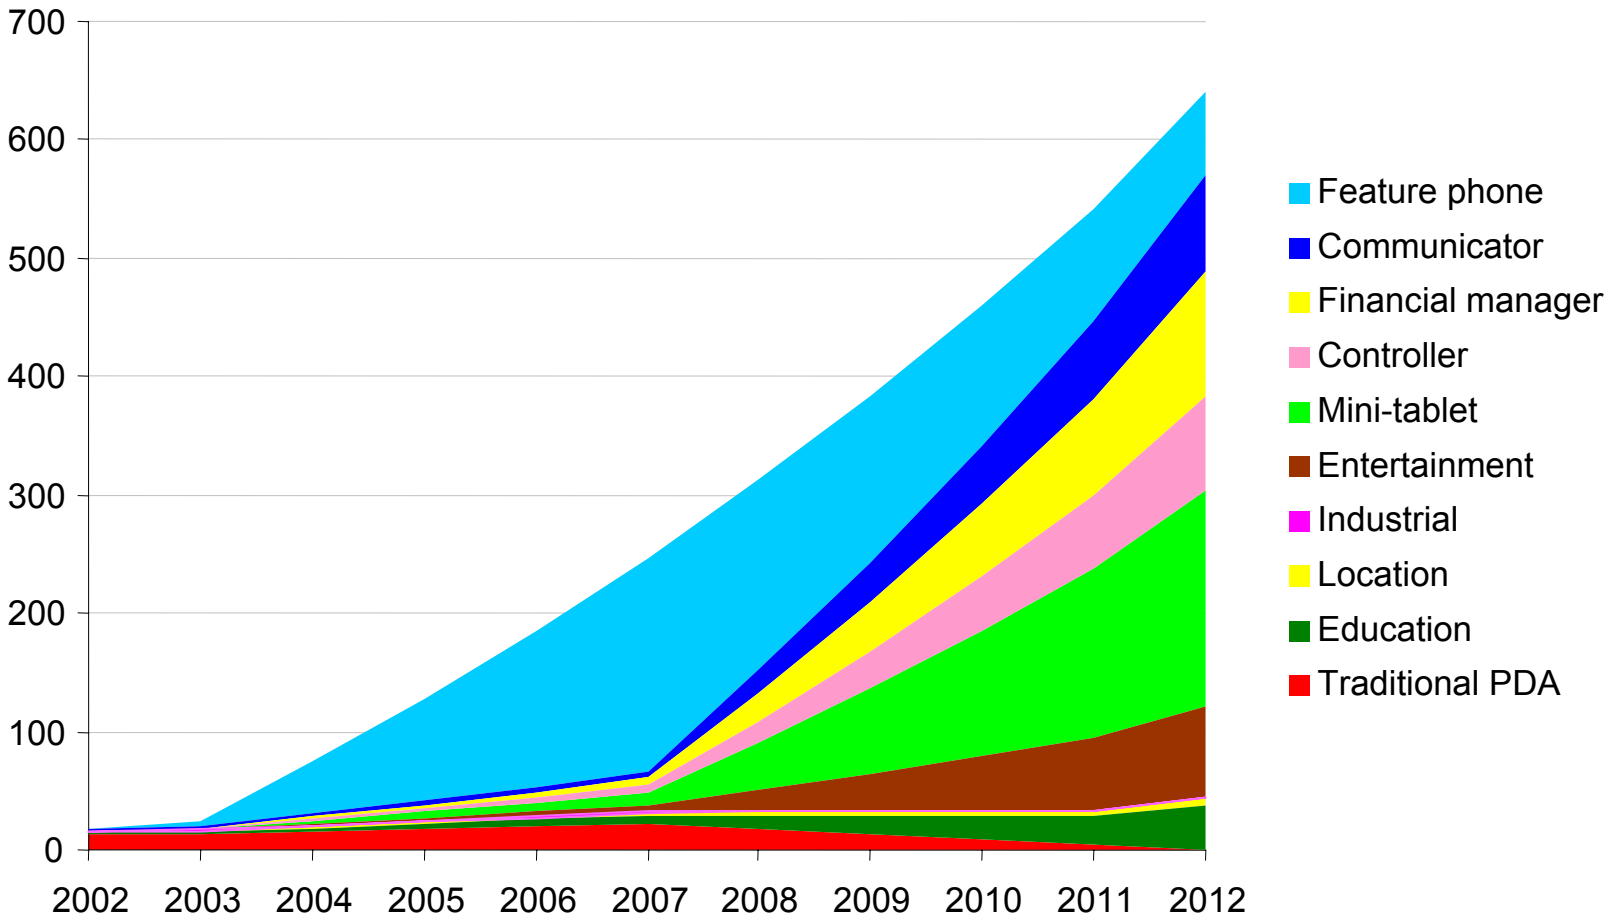

Relative interest, highest to lowest

Current owners	New buyers
Information archive	Payment tool
Communicator	Note-taker
Payment tool	Entertainer
Note-taker	Controller
Entertainer	Communicator
Controller	Information archive

Interest by age band

Evolution of the market

The standard prediction

Mobile phone
Voice only

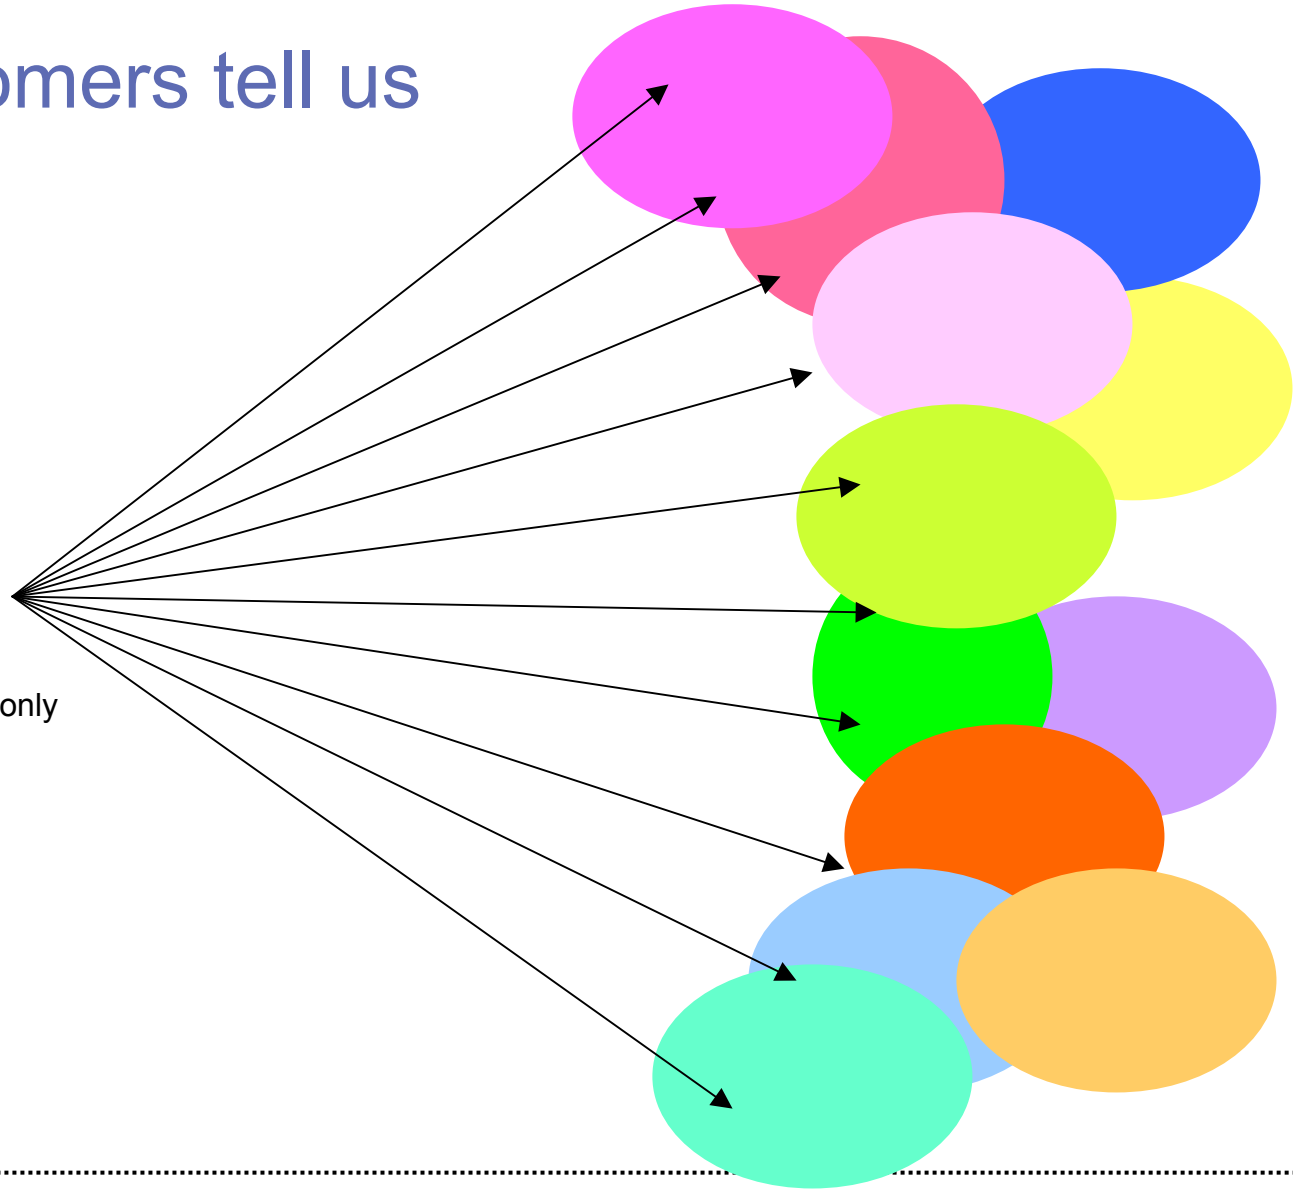

PDA
Calendar and address book only

What customers tell us

Mobile phone

Calendar and address book only

Agenda

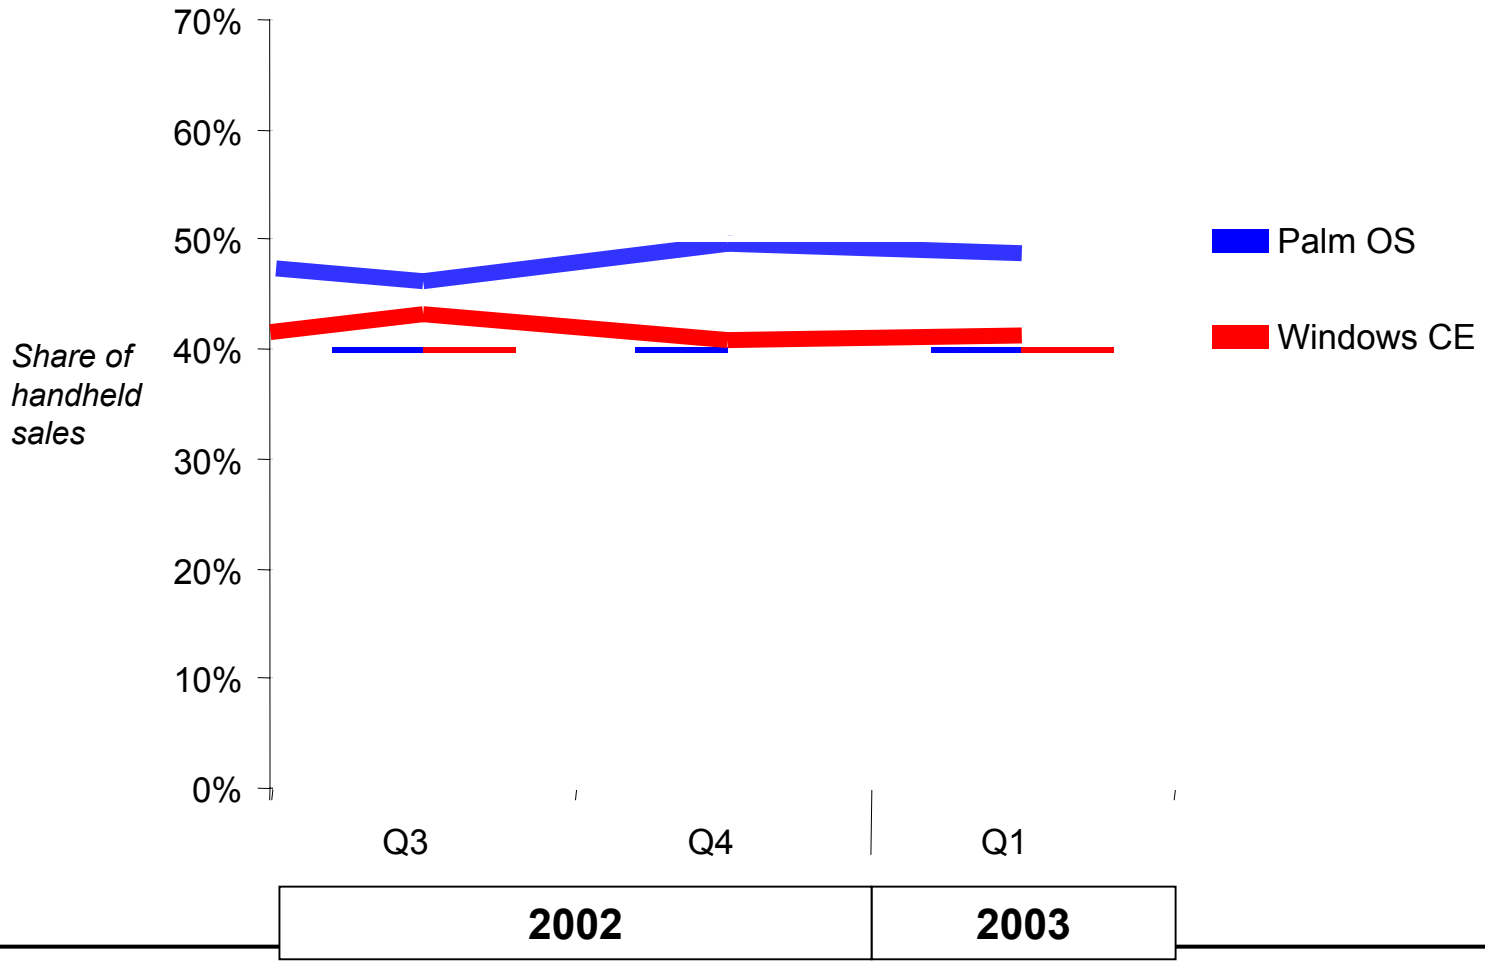

What do customers want?

Who wins?

What we're doing

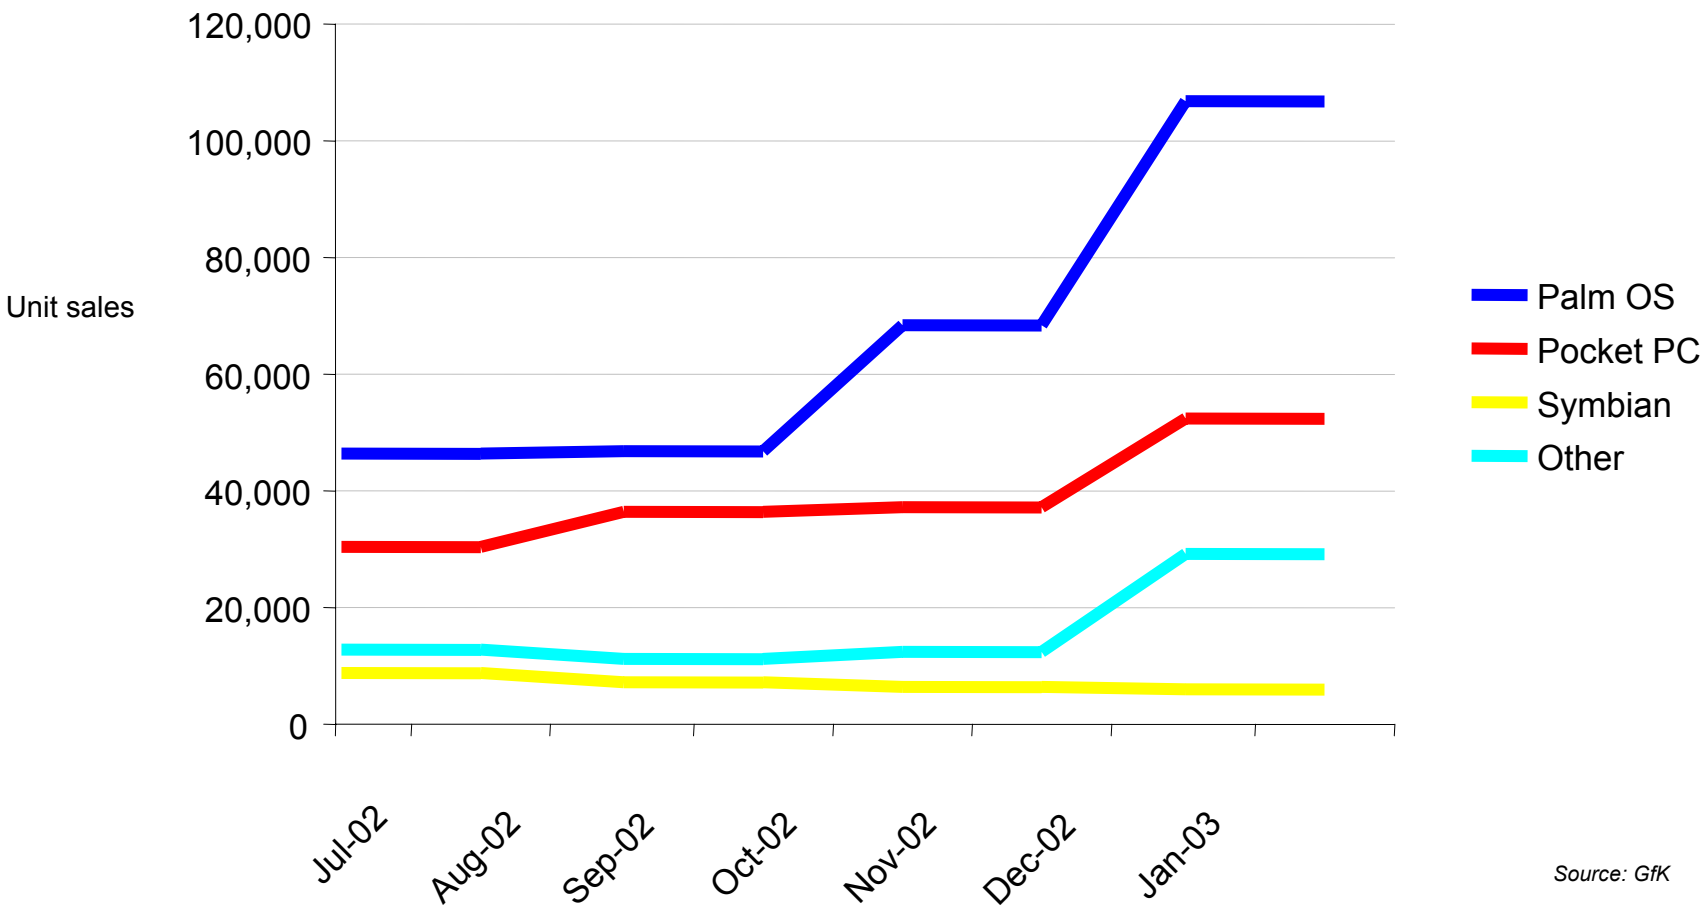

Voices of Doom

European handheld shipments

Source: Canalys

European retail sales

Source: GfK

Microsoft

Pocket PC increasingly irrelevant

- Low energy
- Hardware too restricted
- Focused on enterprise only

Smartphone is the flavor of the month

Long-term focus shifting to Microsoft .Net

- Ties together Microsoft devices, PCs, and servers
- But it only works on Microsoft platforms

For developers: Start over with new APIs (yet again)

Symbian

Phones only

- Because we beat them in handhelds

Deliberately fragmented user interface, APIs

Selling a lot of units, but is anyone using them for info management?

- Very poor handheld replacement

Beaming your business card: Palm OS

1. Press and hold the address book button

Beaming your business card: Symbian Series 60

1. Press the Menu button.

2. Scroll to Contacts and press the joystick.

3. Scroll down to your name.

4. Press the Options button.

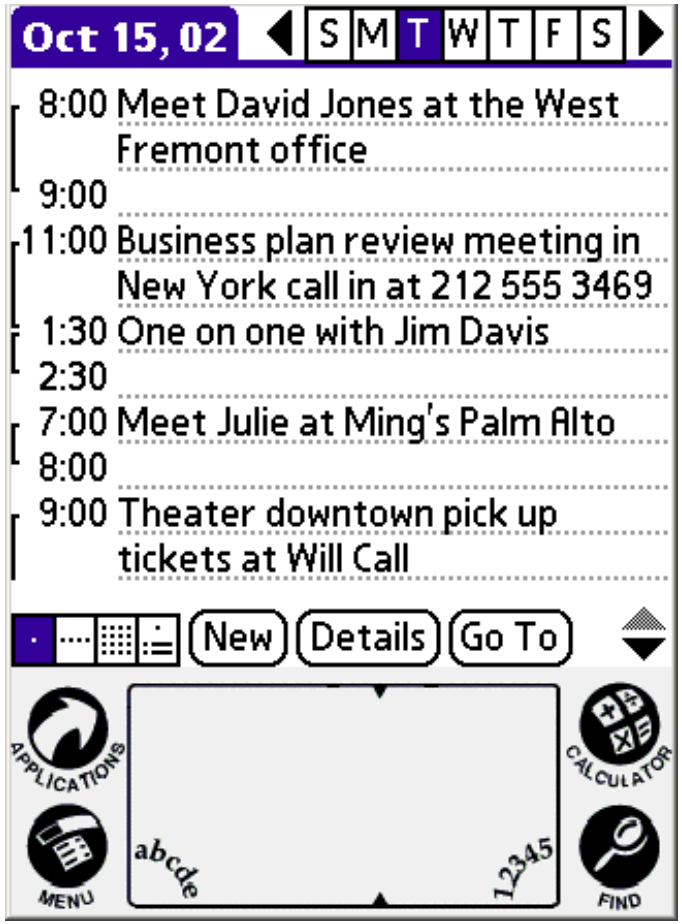

5. Scroll to Send Business Card and press the joystick.

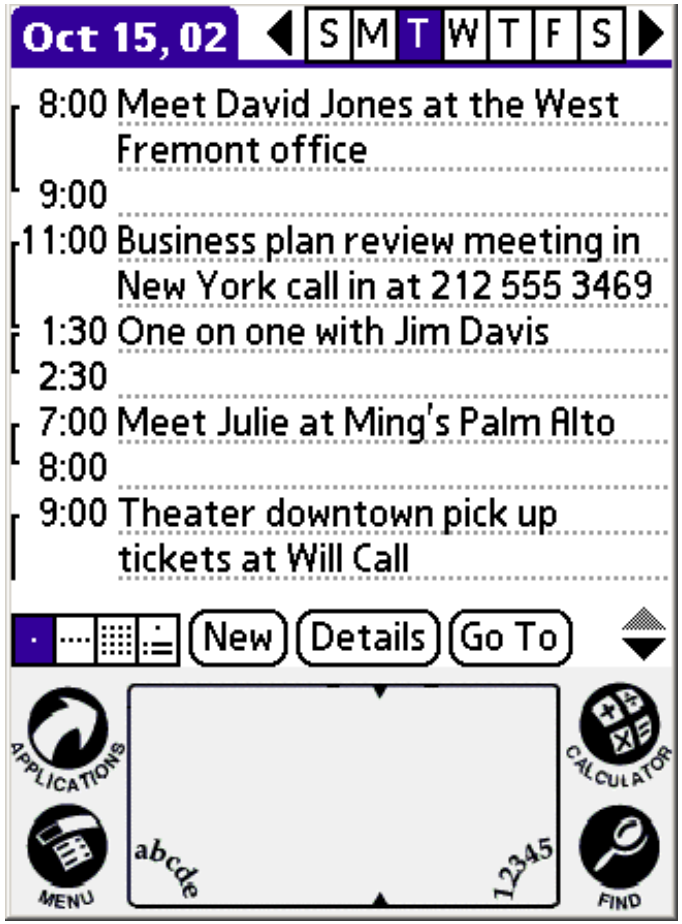

6. Scroll to Via Infrared and press the joystick.

Viewing appointments

Agenda

What do customers want?

Who wins?

What we're doing

PalmSource priorities

Build a great platform for diversity

- Innovative licensees who grow the market
  - Adding undifferentiated vendors doesn't grow the market
  - 30 clones = 28 bankrupt companies
- OS 5: foundation (especially with more memory and full native ARM)
- OS 6: Modern, stable, rich
- Coordinate the APIs

Increase business success of applications

- Business model
- Marketing

Software business model

Scott Maxwell

Pocket Purchase

Making software more visible

First step: An online directory

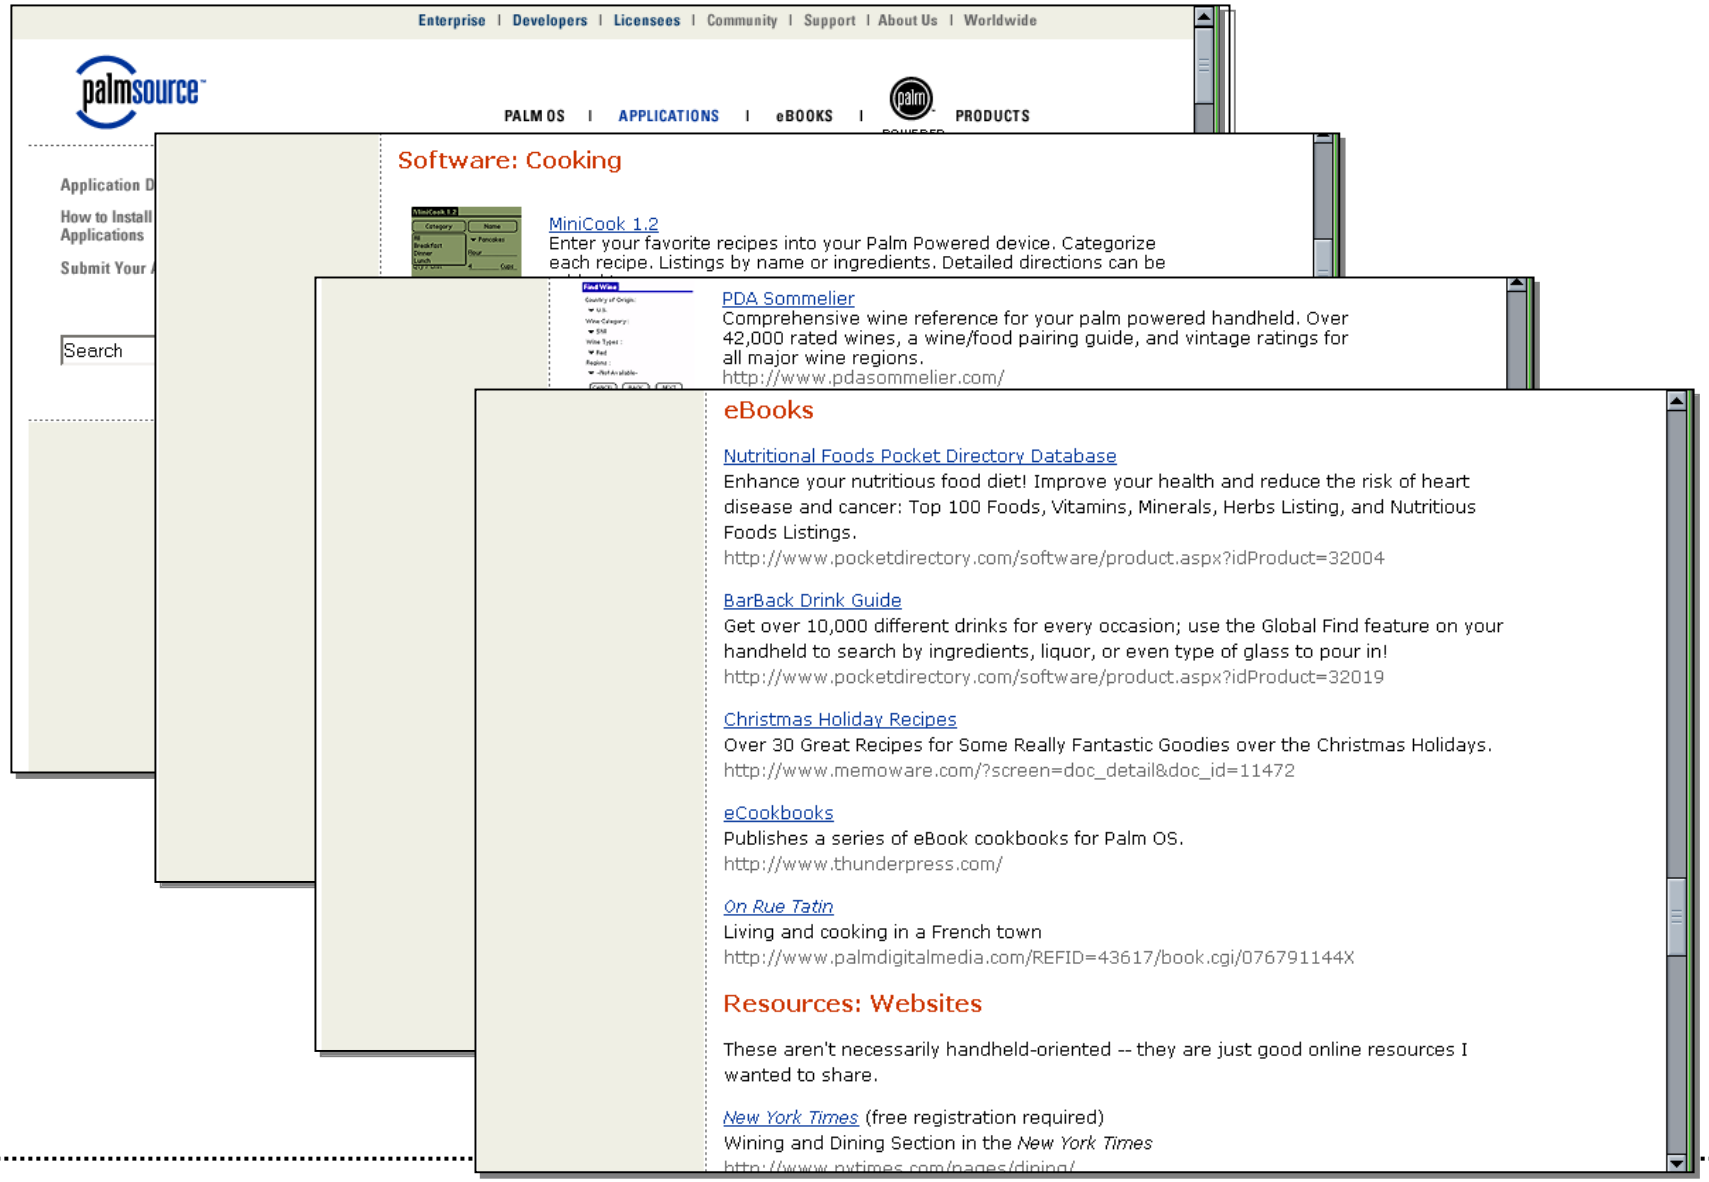

- 3,700 programs
- http://www.palmos.com/products/software/

Next step: Bring it to life

- Describe what you can do
- Give links to software programs, websites, e-books, testimonials, etc.

Role models

PILOTYID
"The Only Source For The Jewish PalmOS User"
About PilotYid
Software Collection
Support PilotYid
What's New?
In The News
Mailing Lists
Help (FAQ)
Other Links
Welcome to PilotYid, the only place on the Web for the Jewish PalmOS user.
Why is this site different from all other sites?
PilotYid contains a collection of software for any PDA that runs on the PalmOS Computing Platform®, such as the ones from Palm Inc., Handspring, Sony, Handera, IBM, Samsung and Kyocera. I began PilotYid in 1998, and since then it has been written about in many leading publications and news sources, such as the New York Times, and has been featured on CNN as well. What makes PilotYid's Software Collection different from all of the other PalmOS software archives on the Web is that PilotYid's Software Collection only contains software and texts that are useful to the Jewish or Hebrew speaking Palm user.
How can I be notified when new Jewish Palm software is available or get in touch with other Jewish Palm users?
PilotYid also maintains two email lists, the PilotYid Announcement List and the PilotYid Discussion List. The Announcement List will keep you updated when there is new software available at PilotYid, and the Discussion List will allow you to be in contact with other Jewish Palm users from around the world. For more info about these lists, or to join them, please see the Mailing Lists page or the Help/FAQ page.
How can I help PilotYid?
Beside scouring the Web for Jewish PalmOS software on my own, I am relying on you for software submissions that you think might be useful to other Jewish PalmOS users. Please e-mail any submissions to me at Ari@PilotYid.com.
How do I view/use/install the files listed in the PilotYid Software Collection?
For more information and help on downloading, installing, and using the files listed on this site please see the PilotYid Help/FAQ page.
How do I create my own files that can be viewed on a PalmOS device?
This site can't possibly grow without the help of the global Jewish PalmOS community. If you would like to learn how to write texts that can be viewed on a PalmOS device, such as local Kosher restaurant listings, local synagogue lists, or any other text that might be useful to a Jewish PalmOS user please see the PilotYid Help/FAQ page. Your submission would be added to PilotYid's Software Collection for other users to download, and would be greatly appreciated.
Thank you and please spread the word,
Aaron (Ari) Engel

Teaching

I am a professor at the University of Virginia.... with my Tungsten T and Margi Systems Presenter-to-go, I can store several lectures... Recently, during a lecture to a med school class of 140 students ... access to my PowerPoint lecture ... failed, leaving me with nothing but ad libs to fill an hour .... Luckily, I had the lecture on my Tungsten and was able to hook it up to the AV system in <5 minutes and save the day.

Healing

As a busy physician my Clie NZ-90 goes everywhere I do. I have close to one hundred pounds of medical reference books on a memory stick. The camera is indispensable for capturing unusual patient findings and wound care.

Losing weight

I have a Palm IIIc. In 2001 I installed the dietlog, exerciselog and weightlog programs to the palm. To this date I have lost 115 lbs and I'm healthier than I have ever been.

Selling

My Tungsten helped me close a sale. I was with a client who decided to raise her purchase price. Unfortunately I did not have any listing printouts aside from what I had already printed with her original criteria. I then pulled out my Palm, connected to the internet, found a listing in the area we were in, called the listing agent and arranged to view the property in a matter of minutes. Not only did she buy, but she has sent many of her friends to buy from me.

Torturing politicians

I went to our state capital on behalf of my industry to meet with legislative leaders. Our keynote speaker asked the assembly for questions. I had a perfect one for him because I had done some internet searching on my Handspring Treo while he was talking. It was great!

"It's my brain"

My Palm m105 IS my brain... Whenever I need to remember a phone number, weather forecast, password, meeting, wake up in the morning, look up a word in the dictionary or answer questi
simply say "let me use my b

My family half-jokingly calls it my "second brain," and sometimes I honestly think it's
more things stored in its
ory than I have in mine.

My Kyocera 6035 is the brain I SHOULD have been born with!

And who needs a brain when I can store names, phone numbers, and addresses and not have to worry about forgetting them at critical times.

“I'm a technical writer and trainer, working for a pharmaceutical research company. In July, 2000 at age 44 I suffered a stroke. The permanent brain injuries caused by the stroke make it very difficult to organize my thoughts, write, and maintain client training progress....

I returned to work 4 months after the stroke, and immediately noticed the difference in my organizational skills, which affected my writing. My rehab counselor suggested ... a digital voice recorder and checklists. But both of these methods meant I had to transcribe my notes onto a PC, which meant more reorganizing, and some days it was almost impossible for me to get my ideas off the paper and into the computer. I was still producing, but at a much higher stress level, and my list of completed projects per month was much smaller than it had been.

The Staples manager who'd sold me the voice recorder suggested that I try a Palm IIIxe, which could synchronize my handwritten notes with my PC's word processor.... The IIIxe package included an early version of DocumentsToGo, so I was set up for writing right out of the box....

Reading technical manuals is also a hard thing for me now, but I didn't really need to read anything except the QuickStart Guide to get the IIIxe running. ... That weekend, I drafted two training projects, synchronized them to my work PC on Monday morning, sent the memos to MSWord using the Palm Desktop, polished them up and delivered them, on deadline, by mid-week. No stress, no angst--just me, churning out multiple projects at a time, the way I'd been able to do before the stroke. ....

After a year with the Palm IIIxe, I upgraded to a Palm m500.... My managers keep telling me how amazed they are at my 'complete' recovery--probably because, thanks to my Palm, my difficulties with organization and writing are greatly reduced and pretty transparent to the rest of the world. I've switched to Wordsmith for larger writing projects, maintain training programs and software license inventories with MobileDB, keep all of my Solaris/Unix reference materials and training material research in MemoPad, and use the Datebook/ToDo/Expense applications for my personal schedule, project lists and expenses. I've even discovered that small doses of certain handheld games like Bejeweled can help me re-focus my brain on difficult days by forcing pattern recognition and providing a break from my writing process.

I've been promoted twice since the stroke....

I used to think of PDAs as expensive executive toys--but now I know that a good PDA can be like having unlimited extra brain cells. I would not be in the job I have today, nor be able to do it as effectively, if I hadn't discovered how a Palm could make research and writing fun again.”

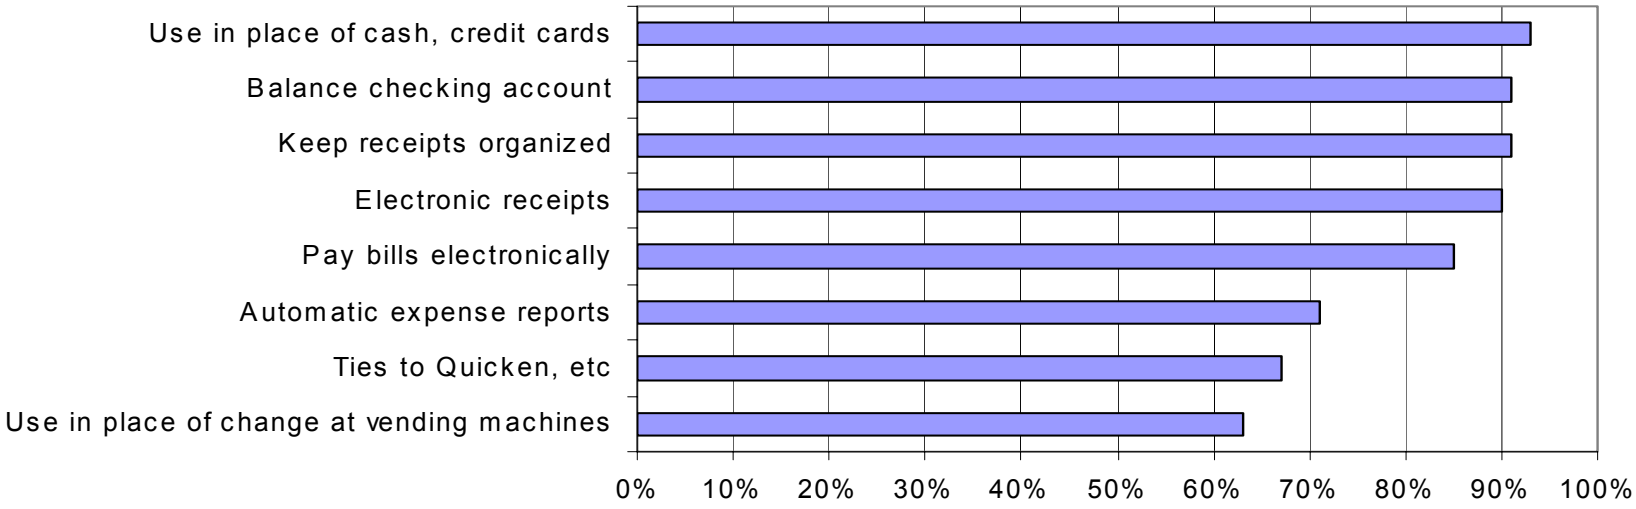

Remember

1. **Diversity = growth**
2. **You play a critical role**
3. **The big opportunity is still ahead**

Outline

Market status (what's going on)

Segments (how we got to them)

Competitive comparisons (have they seen the calendar thing?)?

Enterprise

Expanding universe

The real market is iMode, Symbian, iPod, Fossil, etc all wrapped together

Like kids arguing over space in the bathtub when the ocean's next door.

Competition

- Microsoft: Focus on .Net (a proprietary universe)
- Symbian: Focus only on phones
  - It's not about just slapping features into phones
  - TapWave will kick the butt of NGage

Remember

PalmSource 99

De facto standard for a new form of computing

28 million devices sold; ~24 million users

#1 in the US and Europe

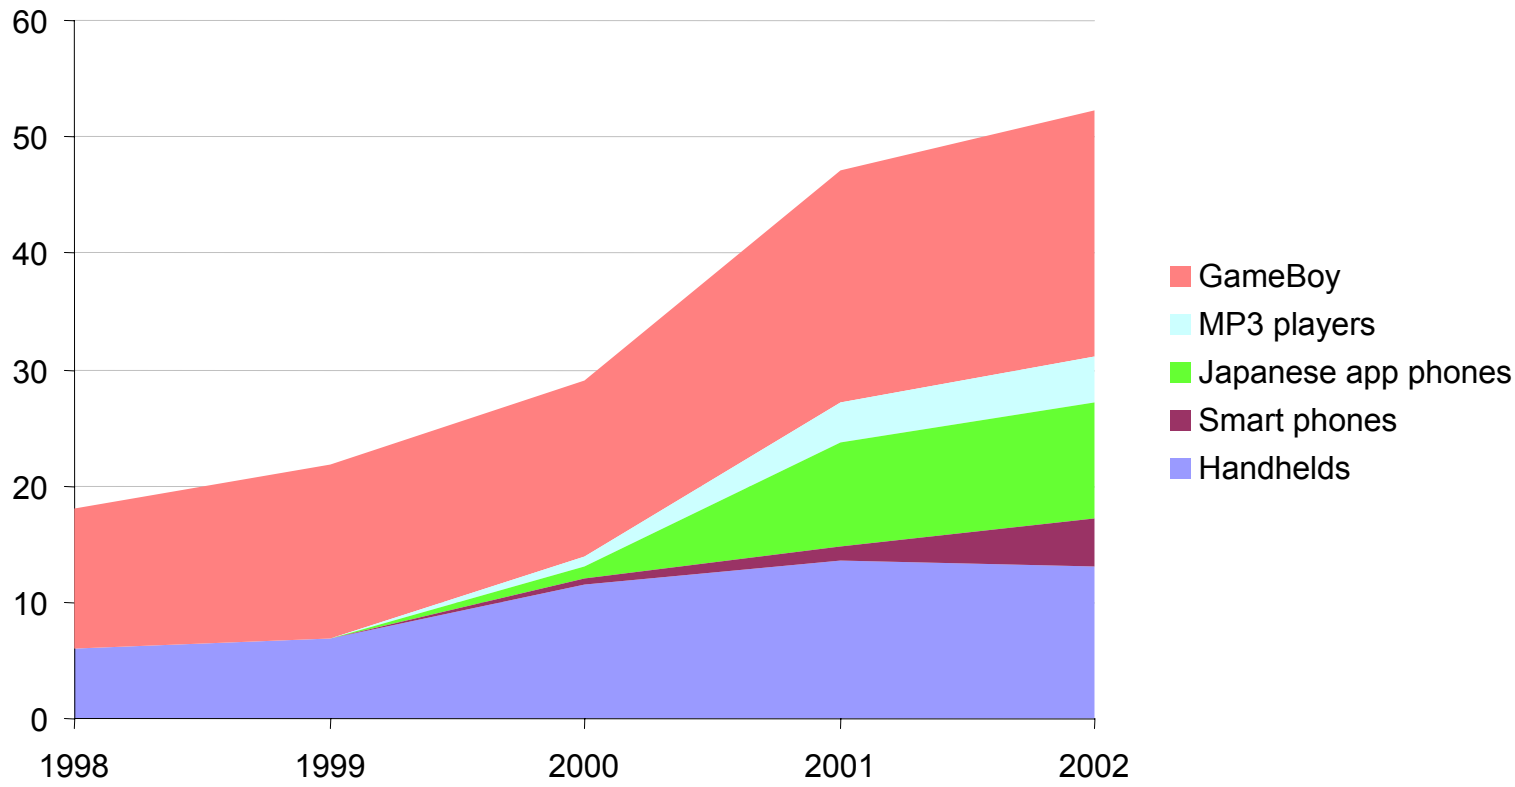

Great lineup of enterprise partners

Rapidly maturing infrastructure

17,000 great applications

260,000 developers

What is the market??

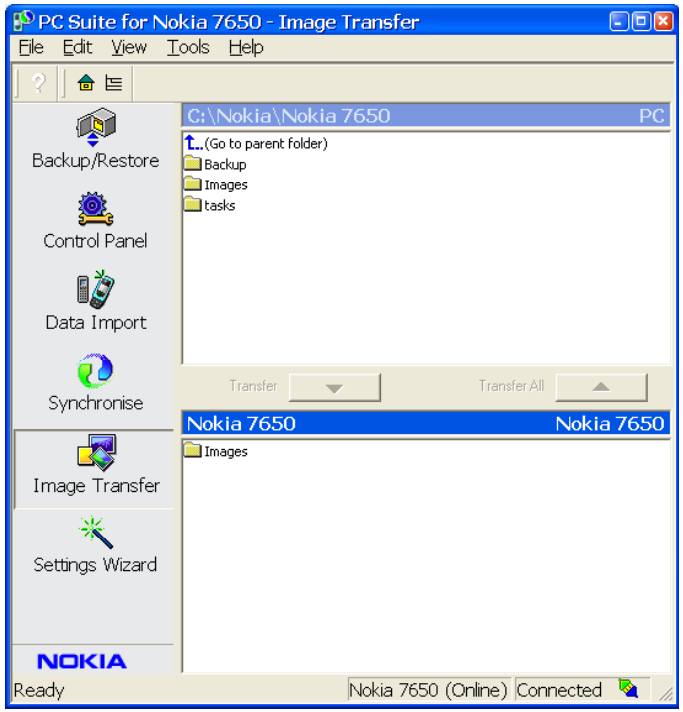

palmsource

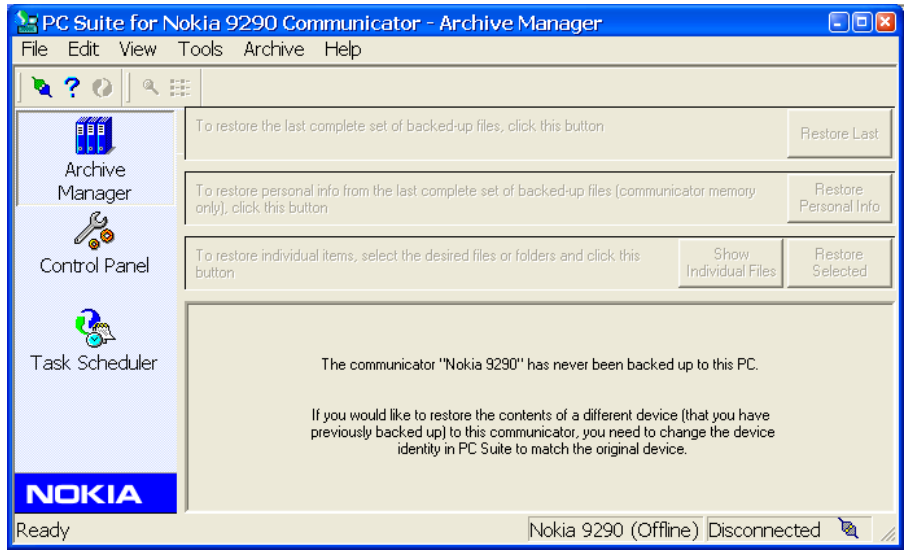

palm
POWERED

Synchronization on Symbian

Different sync for different products – even within the same company

Nokia 7650

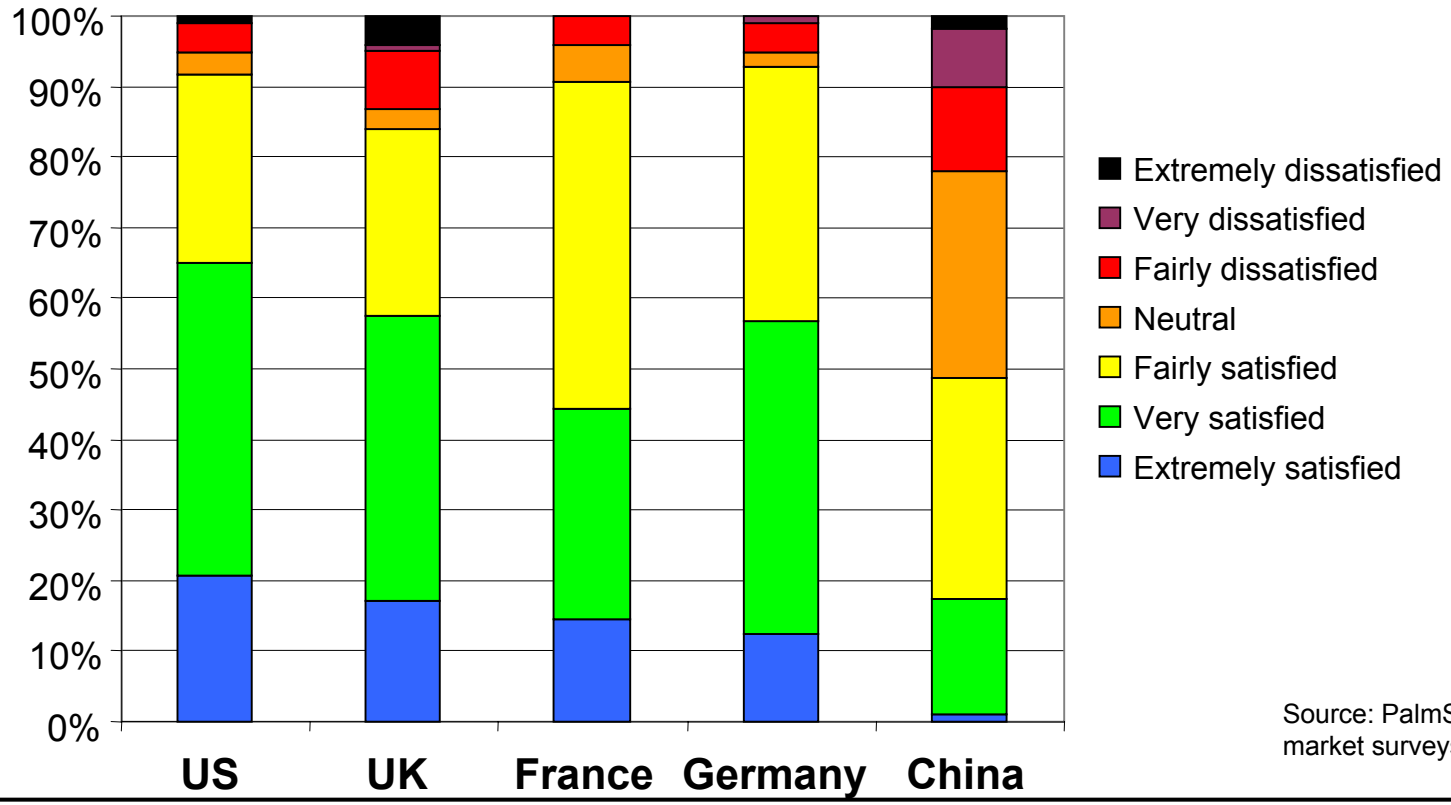

Nokia 9290

China: A different world

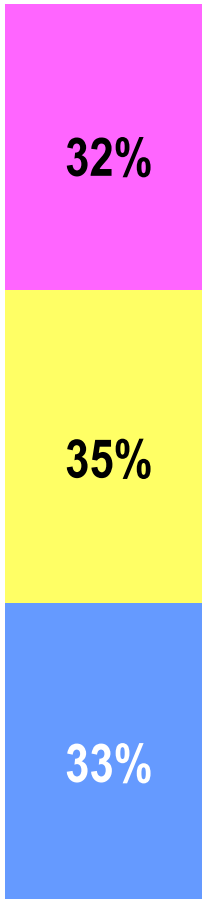

Chinese handheld users much less satisfied

Why: Hard to use, systems not capable enough

Source: PalmSource market surveys, 2002

China market segments

Mobile web terminal

- Browsing, SMS and IM, e-mail, wireless
- Don't care about voice
- Younger users (web cafes?)

Enhanced phone

- Basic handheld functions in a phone
- Very price sensitive

Information management

- Very strong desire for downloadable apps
- Very strong desire for dictionary
- Most likely to buy with own money

Synchronization

Users expect sync to also back up their data

- That's what Palm OS does
- The only exceptions: Programs designated not to be backed up, and storage cards
- Restore is easy: Just give new device the same name
