The Wireless Challenge

The Wireless Challenge

"Swiss Army Knife" approach is very risky

- ✓ Long line of failed wireless data products

Success requires intense focus:

- ✓ Hardware and Software integration
- ✓ Critical judgment calls:
  - What is the user's most basic goal
  - Balancing flexibility and simplicity
  - What to include
  - What to leave out

Success requires a close collaboration w/the operator

Total solution requires key partner solutions

The Handspring Edge

Extensive record of success at delivering superior usability in mobile devices

- ✓ Integrated Hardware & Software design
  - Palm OS, PIM apps, Hotsync, Graffiti, True plug and play expansion, voice and data integration
- ✓ Award winning products
  - Palm products through Palm VII
  - Visor
  - Treo (90, 180, 270, 300, …)

Focusing these core capabilities on making advanced mobile services easily accessible to mainstream markets

What the press are saying about Treo…

"The Treo 270 is. . . .the best marriage of telephone, Palm operating system, wireless messaging and Web access you'll find, especially considering its 5.4-ounce, fit-in-your-shirt-pocket convenience."
Frank Bajak, The Associated Press, July 22, 2002

"Treo is a marvel of thoughtful design."
- Steve Wildstrom, BusinessWeek, November 30, 2001

"Handspring's Treo line took the best from the Palm-capable PDAs, added a keyboard … and stirred in usable cell-phone features, all in a pocket-sized package."
- Alan Zisman, Business in Vancouver, 12/17/02

"If you prefer a hybrid Palm and cell phone, Handspring's Treo communicators are the best option "
- Rob Pegoraro, Holiday Gift Guide/Washington Post, 12/15/02

"Its "telephoneness" is precisely what makes the Treo great. The Treo is a telephone that just happens to have a full, but tiny, keyboard built in. The best use of that keyboard is to look up phone numbers; I have more than 4,000 people in my contact list, and I can call any one in fewer than five key clicks on that keyboard. Who needs speed dial?"
Stewart Alsop, Fortune Magazine, June 2002

Strategic Carrier Partners

Sprint

US
15 million subs

Orange

UK, France, Switzerland
plus 17 other countries
44 million subs

T-Mobile

US
10 million subs

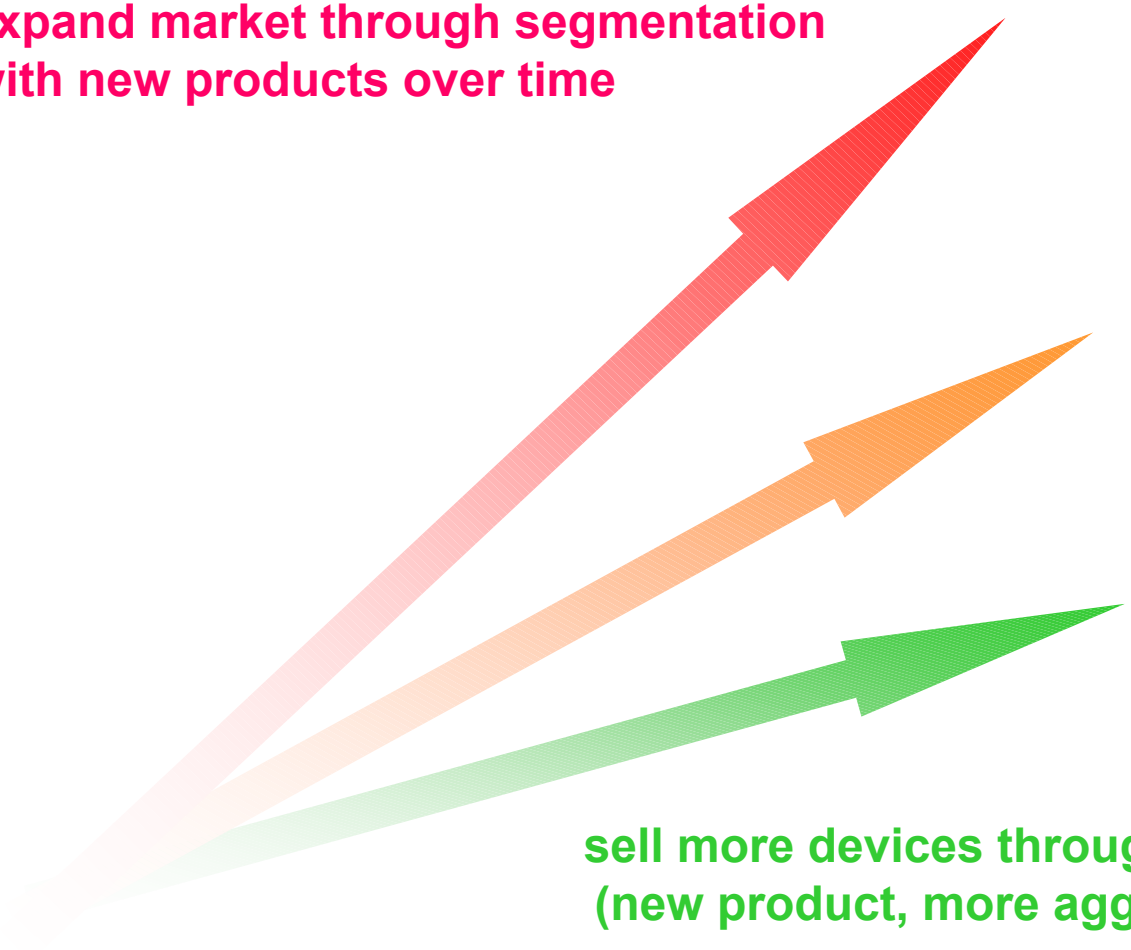

Carrier Partners (continued)

- North America
  - Cingular
  - AT&T Wireless
  - Rogers AT&T (Canada)
- Europe
  - mm02 (UK, Netherlands, Ireland, Germany)
  - Telia, via APE Telecom (Sweden)
  - SFR (France)
- Asia Pacific
  - SmarTone (Hong Kong)
  - SingTel (Singapore)
  - Far EastTone (Taiwan)
  - Optus (Australia)
  - Vodafone Australia & New Zealand
- Latin America
  - Telcel (Mexico)
  - TIM (Brazil)

Growth Dimensions

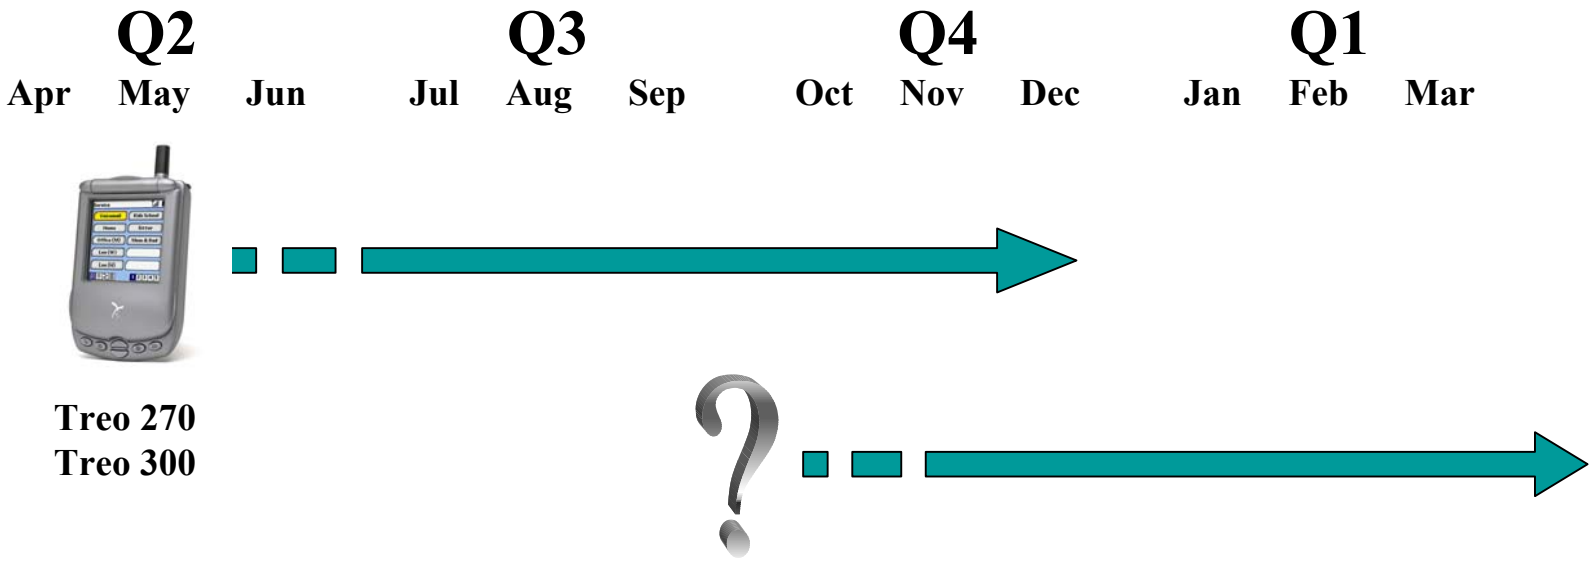

expand market through segmentation
with new products over time

add more strategic
carrier partners

sell more devices through existing carriers
(new product, more aggressive marketing)

The Hardware Roadmap :-)

Partner opportunities

Of the 12,000+ Palm OS apps, very few designed with wireless in mind

"Wireless" games that aren't wireless…

Software that assume circuit switched networks

Few optimizations for limiting power consumption

Optimization for one-handed use ideal

Decoupling desktops over time (ie desktop assisted translator vs native .pdf viewer)

Handspring has experience and can help with these challenges…

A focused approach: 6 month snapshot

Work closely with key partners to leverage efforts

- Developers, Strategic Operators, PalmSource and others

Provide critical resources & GET OUT OF THE WAY

- Online information, forums, documentation, source code, etc.
- Access to hardware
- Access sales channels

Team focused exclusively in the wireless space

http://www.handspring.com/developers

Preparing for a Project

Registration required to develop

- PalmSource and Handspring

Market information for business planning

Product information

Access to developer and training resources

Links to operator and channel resources

Focus on minimizing project costs and timeframe

Developing a Project

Treo Development Kits

- Product details, UI conventions, mechanicals, key API documentation, samples, etc.
- Source code
- Tools

Forums for support

Hardware availability

- Seeding for “anchor” developers
- Discount program for all developers

Deploying the Project

Bringing the solutions to customers

Providing Critical Resources

- Co-marketing activities
- Awareness Building/PR/etc.
- Distribution
- Access to strategic operator channels

Focus on maximizing project revenue for the developer
