European Developer Conference

Driving the Mobile Enterprise

PalmSource in the Enterprise Market

Presented By:
Robert Hayes,
Senior Director
Business
Development

Agenda

We are there today

- PalmSource presence in the Enterprise

We can help you succeed

- Palm OS Business Solutions Program

The building blocks are there

- PalmSource platform technology

Palm OS Is a Leading Contender in the Handheld Platform Market

Palm OS is recognized by IDC as being the leading operating system for handhelds

- This has been a consistent position over the past seven years

Palm OS is on many IT standards lists for handhelds

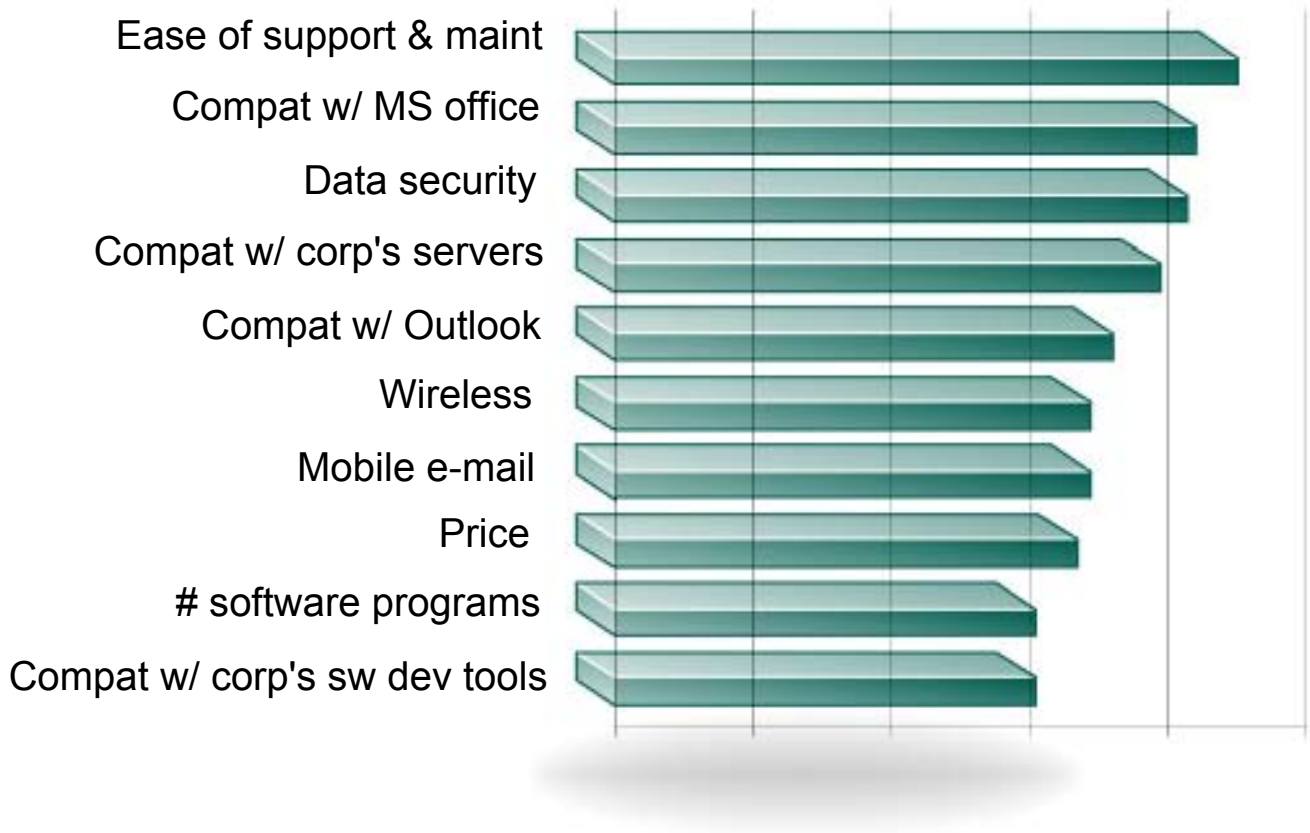

- For companies that have standards lists with handhelds
- This shows acceptance by IT users

Many large and small enterprises have deployed Palm OS solutions

- Success stories and case studies on ours and our licensees websites

IT: Solve the Issues That Matter Most

The Enterprise Is in Transition

IT Managers need to secure and control mobile devices more than ever before

- On-device security and secure connection to corporate network are the two major challenges

Enterprises are embracing the age of wireless

- WAN, WLAN, HotSpots, home networks, Bluetooth,…

Mobile applications have gone far beyond the PIM

Enterprise Product Strategy – What We Are Saying to Enterprise Customers

A practical approach to security

- Your data and networks are secure but can be easily accessed
- Support the most ubiquitous security standards

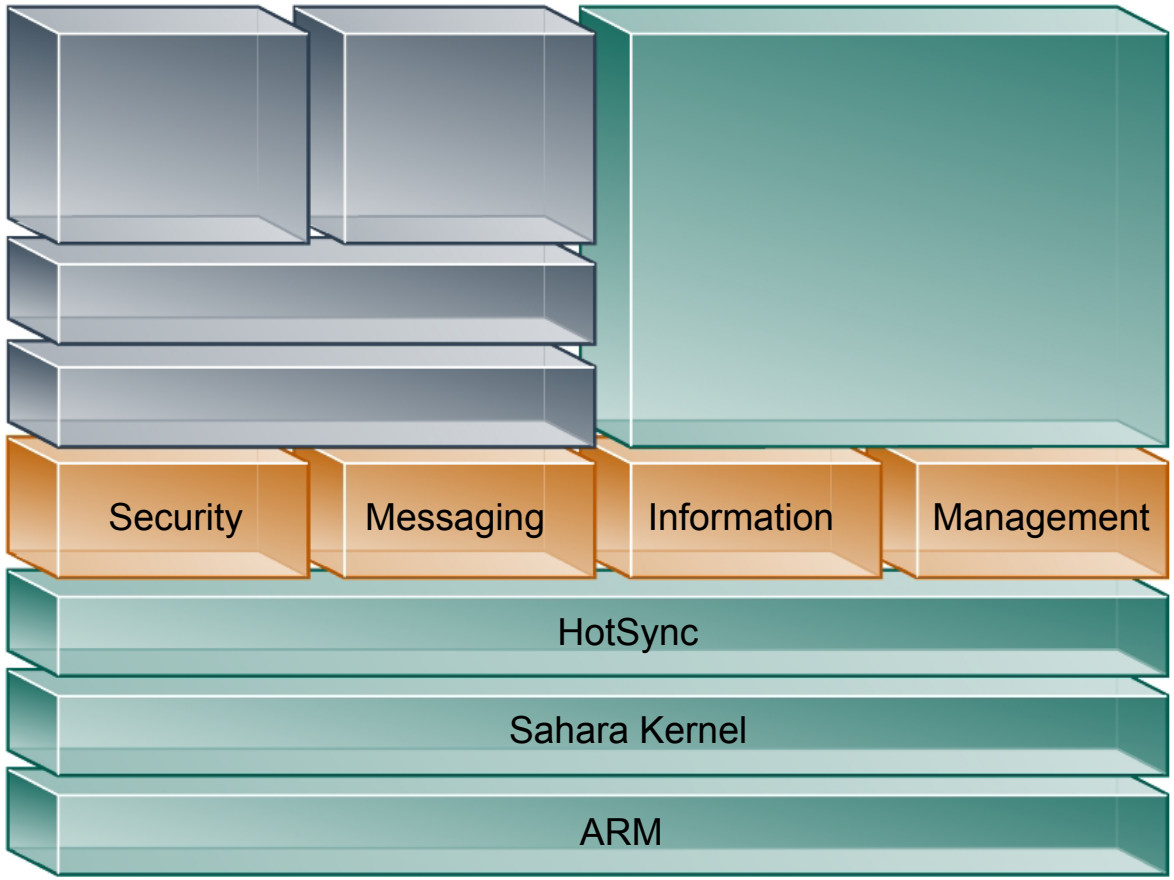

Robust server integration

- Deliver an open, standards-based architecture for delivering web based services to the device
- Simplify server integration through synchronization metaphor

Open, flexible wireless messaging

- Full integration with messaging standards – email, IM, SMS,…
- Integration with Exchange, Lotus and Groupwise
- Transport and network agnostic

Sahara Platform - Tomorrow
Mobile Business Architecture

Mobile Business Architecture

- Mobile Security Framework
- Mobile Messaging Framework
- Mobile Information Framework
- Mobile Management Framework

Mobile Security Framework

Palm OS 5 Foundation

- End-to-end SSL v3.0
- Cryptography Provider Manager: encrypt, decrypt, hash
- FIPS 140-2 certification

Sahara Framework

- Pluggable cryptography and verification
- Signed code
- Encrypted databases and files
- Authentication tokens
- Certificates

Mobile Messaging Framework

- **Palm OS 5 Foundation**
  - Exchange Manager
  - Simplified 3rd party solution integration
  - POP3/IMAP native
- **Sahara Framework**
  - Back-end connection out of the box based on standards
  - Full integration with messaging services – email, IM, SMS, MMS
  - Plan to support major enterprise messaging vendors
  - Transport and network agnostic

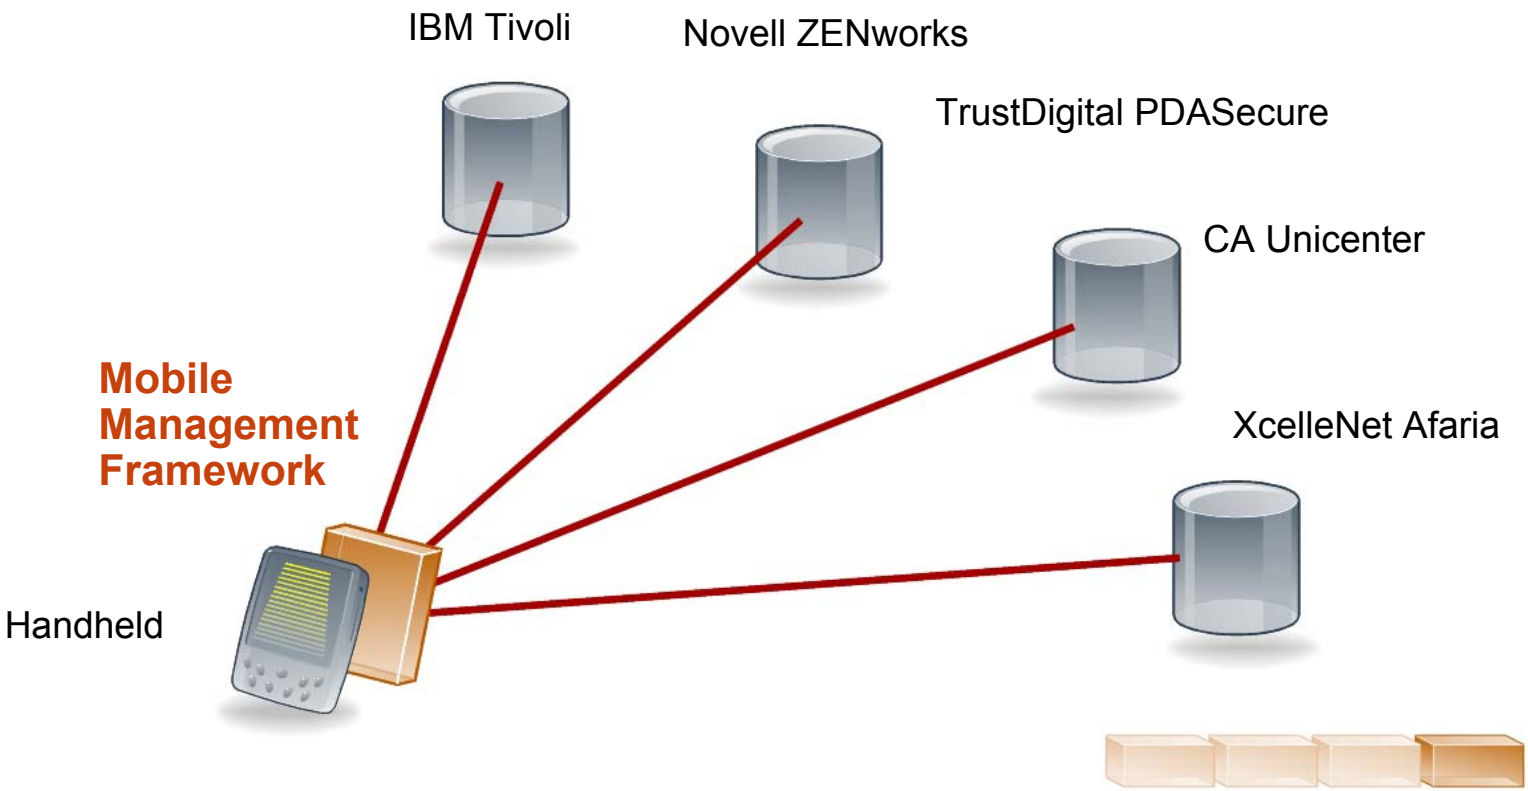

Mobile Information Framework

- **Open standards-based information services**
- **Open Document Services**
  - Built-in native file format support for standard enterprise file formats
- **Open Browsing**
  - Standards-based web browsing - HTML 4.01, HTTP 1.1, XHTML 1.0, CSS, DOM, cHTML, JavaScript 1.5, DHTML, GIF, JPEG
  - No proxy server required
- **Integrate support for web services directly into Palm OS**
  - Provide access to web services toolkit for Palm OS developers
  - Provide a distributed application and new sync model for mobile data

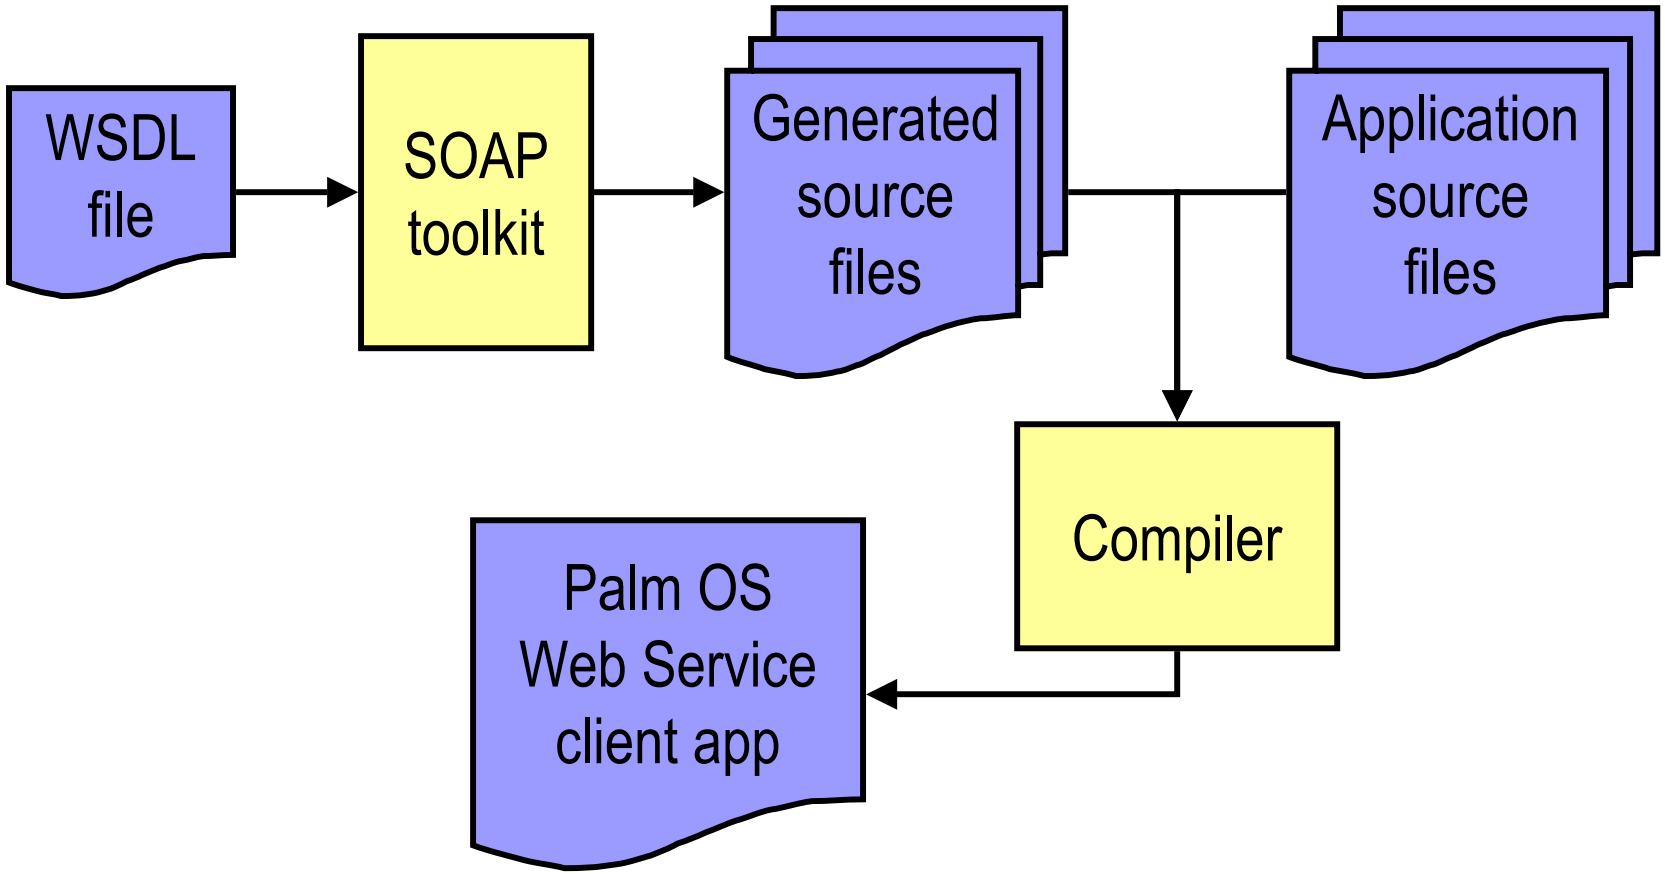

Mobile Management Framework

Web Services – Development Process

Web Services – Sample Applications

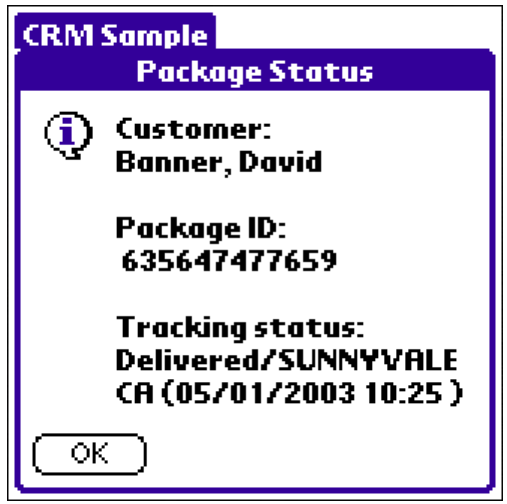

Web Site Data

Server Functionality

Enterprise Backend Integration

Web Services – Simple Code

All the code required to add translation to our email application

```
void DoTranslation(Char *text, Char *languages)
{
  int rc;
  struct tns__BabelFishResponse translation;

  soap = soap_new(); if (!soap) return OutOfMemory;
  soap->namespaces = NAMESPACES;

  rc = soap_call_tns__BabelFish(soap, url, action,
                                languages, text, &translation);

  switch (rc) {
    // Process result here
  }

  soap_end(soap);
  free(soap);
```

Your world, wherever you are
