Palm OS Developer Certification

Knowledge Required for Certification

Tasks:

- Design the solution
- Prototype
- Write the Code
- Testing
- Debug
- Optimize

Design the solution Back To Top

- Error Handling Strategy
- Design Testing Strategy
- Synchronization Strategy
- Communications Transports and protocols
- Hardware Configuration
- Programming Tools
- Shared libraries, plug-ins, code resources
- Installer Technology
- Designing the UI
- Data Formats
    - 64K limitations
    - Storage methods
    - Sync efficiency
    - endianness
    - Processor speed
- Sharing Date With:
    - Built in Apps
    - Expansion Cards

Prototype Back To Top

- The UI
- Synchronization
- Data storage and retrieval
- Communications

Write the code Back To Top

- Inter application communication
- Identify Database Attributes
    - Type, creator, backup bit
- Appropriate error handling
- Structure of an error code
- Create UI Resources
- Initialize forms and form objects
- Draw forms

- Form objects
- Graphics
- Handle events
- Support of menus
- System notifications
- Effectively and efficiently manipulate databases
- Saved/unsaved, app info vs. pref, feature pointers
- Launch Codes
- Supporting Find and Goto
- Distinctions between alarm and Attention Manager
- Distinctions between category and Data manager
- Use of Palm OS network library
- How to use WCA
- Exchange manager
- Internationalize code and resources
- Nuances of Palm OS memory architecture
- Function of Conduit Entry Point
- Conduit Synchronization
- Archive and Back up
- Preferences
- Backend Interfacing, alignment endianness
- Install /Uninstall conduits
- Installing an application
- Rules for future OS compatibility

Testing Back To Top

- Reproducing a bug
- Gremlin hordes
- Automated testing of an application
- Identify different testing methods

Debug Back To Top

- Identify specific debugging methods
- Identify Errors for Palm OS applications
- Identify Programming mistakes
- Debugging network applications
- Identify likely causes of problems
- Identify appropriate actions and tools to isolate problem

Optimize Back To Top

- Identify ways to optimize:
    - Sync-speed
    - Memory
    - Battery use
    - Perceived speed
    - UI
