Palm OS Developer Certification

Developer Success Story: Palm OS Certified Developers from Copera

Copera, a PalmSource Professional Services partner, recently completed a project with PalmSource and one of PalmSource's clients. The project required PalmSource and Copera to integrate a VPN client into HotSync. The integration of VPN and HotSync permits users of Palm Powered™ handhelds to securely synchronize their data using enterprise-class encryption.

An architect from PalmSource Professional Services assessed the VPN technology and designed a solution to integrate it into HotSync. After the architect completed the design and reviewed it with the client, PalmSource partnered with two Palm OS Certified developers from Copera to assist PalmSource with implementing and testing the solution.

PalmSource and Copera completed the project in just four weeks. Copera's experience with Palm OS security and synchronization allowed them to complete this project to the high standards demanded by PalmSource Professional Services.

PalmSource's client was very pleased with the timeliness and professionalism of the PalmSource/Copera team.
